HASSLEIN INSTITUTE OF TEMPORAL PHYSICS

WINDSOR, NEW JERSEY

August 31st, 2013

Dr. Alexandra Moore
Director, Hasslein Institute of Temporal Physics
Suite 402, Building One
Windsor, New Jersey 08545

Subject: Report of Temporal Chamber Experiment

Dr. Moore,

Per your request, my final report regarding my and Dr. Buckley's experiment using the Temporal Chamber is attached.

Before you read the report, I cannot stress enough that myself, Dr. Buckley, our lab assistant Joanne McQueen and the two women who emerged from the Chamber with us are from a different timeline than the one we are living in now. The Dr. Christopher Farrell that you have known over the past ten years in not really me. We both my look exactly the same and have the same DNA but we are in reality two different people. Our memories and experiences are totally different and unique.

Conversely, the Dr. Alexandra Moore who I knew in the timeline I come from is a different person than you.

The timeline in which I was born, grew up in and lived in had a very different history than this one. The fact that the history of the last 40 years has almost completely changed proves that my and Dr. Buckley's experiment was a success.

In order for you to understand the changes, and fully understand my report, I have included many of the records that were archived in the Temporal Chamber, as with Dr. Buckley, Ms. McQueen and myself, they were shielded by the Chamber from the changes in the timeline. These records include reports, diary entries, news articles and correspondence dating back to the early 1970s. As you read through these documents I hope you understand just how different the world we came from was from yours, but also the reason that Dr. Buckley and I took the actions that we did.

The very first of the documents you should read is the article my father wrote in 1974 which called for the establishment of this Institute in that timeline. My father was a visionary man and I have accomplished the goal for which he devoted his entire life.

Please read all of these documents before reading my final report. Thank you.

Sincerely,

Christopher Farrell

Christopher Farrell, Ph.D.

COMMENTARY

The Legacy of Dr. Otto Hasslein

By Dr. Joseph A. Farrell

It was just a year ago that the scientific and academic communities were rocked by the news of the death of Dr. Otto Hasslein. His murder at the hands of the apes from the future is not only a tragedy for his family and friends but also a major blow to the scientific development of the world.

I never met Dr. Hasslein but we corresponded on occasion since we both pursued similar lines of research in regard to temporal theory. The work that Dr. Hasslein was doing in this area was groundbreaking and often guided my own research. If he had lived I am convinced that one day he would have been regarded as the Albert Einstein of temporal physics.

Hasslein's multi-lane theory of time and his treatise on infinite regression revolutionized scientific thought on these two subjects. When Dr. Hasslein proposed his theory of time in a vehicle traveling nearly the speed of light as the first ANSA flight was announced, most inside NASA refused to take the theory seriously. It was only due to the support of the mission's commander, George Taylor, that a Earth Time clock was installed on that ship. Now, thanks to the return of that ship last year, NASA and the whole scientific community know that his theory was 100% accurate.

Just imagine the incredible strides that would have been made in understanding the nature of time if Dr. Hasslein had not been murdered. It is now up to those of us who survive him to continue Dr. Hasslein's work and honor his legacy.

With that goal in mind I propose the establishment of the Hasslein Institute of Temporal Physics. It would be the first and only institution in the world entirely devoted to the study of temporal theory.

This institute would need to be affiliated with an top Ivy League university. It would also require a partnership with NASA. This Institute would not be a division of NASA like the JPL. Instead the two organizations would work together on an equal basis.

The necessity for this institute is immediate. NASA has announced that the suspended ANSA interstellar program will resume next year. Due to the recovery of the ANSA One spacecraft NASA scientists say the time dilation effect that Dr. Hasslein predicted can be prevented on future missions. However, there are current only a few experts scattered across the world, such as Dr. Daniel Buckley at Princeton, who are experienced enough in temporal theory to ensure that NASA is correct. The Hasslein Institute would gather these experts in one place and maintain a growing database of temporal data gathered from ANSA flights.

Also, the apes who murdered Dr. Hasslein came from one possible future. We need a much greater understanding of time to prevent that future

from ever happening. The Hasslein Institute would be the nexus for that work.

Even without these two essential applications, there is still a need for such an institution. The field of temporal physics has become an orphan within the scientific community and this field is just too important to be ignored any longer. The past has taught us that many lines of research that showed little practical use at the time yielded important discoveries years later. Where would modern electronics be today without the study of the electron by Sir John Joseph Thomson and Robert Milikan decades ago? We need to explore this uncharted area of study to further our understanding of the universe and we need to start now.

Dr. Joseph A. Farrell is a Physics Fellow at Fordham University.

Fordham University
Bronx, N.Y. 10458

Dr. Farrell,

I wanted to say thank you for your mention of my work in your excellent article in last month's Scientific American.

In fact, I found your article so inspiring that it motivated me to take action to help you establish the Hasslein Institute.

First, I obtained a copy of your petition calling for the Institute and encouraged over 30 of my colleagues to sign it as well. I have calls or sent letters to another 50 physicists throughout the country encouraging them to sign the petition as well. My hope is that eventually over 100 of the top physicists in the country sign the petition supporting the creation of the Institute.

Second, I have met with our University's President to urge to him to support establishing the Hasslein Institute here. He is very open to the idea and thinks that it would be a prestigious addition to the University. However, he is currently withholding is full support due to his concern over funding. He said that the Institute would need to secure a commitment from the government for at least 80% of it's required expenses before he would give it his full support.

To that end, I have contacted our local Congressional Representative, Jason Breck, to get his help in obtaining the required government funding. Although a Junior Congressman, Rep. Breck sits on the House Science Committee and the Space Subcommittee which oversees NASA. He is also a very ambitious politician. I've heard that he is thinking about running for the Senate in a few years and bringing a large government appropriation, with all the local jobs that it will generate, would be a big feather in his cap.

Through his chief aide, Hari MacDonald, I have obtained an appointment with Rep. Breck when he is home for the Christmas break. I hope you can attend the meeting with me so we can lay out our case. My secretary will send you the details.

Sincerely,

Daniel Buckley

PERSONAL AND CONFIDENTIAL

RE: Hearings on Hasslein Institute of Temporal Physics

Chairman Hazeltine,

Allow me to offer my congratulations on your re-election in last fall's midterm elections. I look forward to continuing to serve under you on both the Science and Intelligence committees as well as the subcommittee on Space.

It is in regard to your role as Chairman of the Science committee and subcommittee that I am contacting you. During the Christmas recess I met with two physicists, Dr. Daniel Buckley and Dr. Joseph Farrell, concerning the establishment of a Hasslein Institute of Temporal Physics. Dr. Farrell made a very persuasive argument for the Institute in an article in the November issue of Scientific American magazine. (The article is attached for your review.) In the short time since the article was published, Drs. Buckley and Farrell have obtained widespread support for the Institute in the scientific and academic communities including many at NASA. The President of Princeton University is willing to host the Institute if the necessary funding can be secured.

As members of the Intelligence committee we were privy to the testimony given by the apes Cornelius and Zira about the future. The Hasslein Institute can be a tool that we can use to ensure that the future they foretold never comes to be. Of course, that would remain a government secret. To the public justification for the Institute will be to aide NASA in continuing the ANSA program that they are planning to resume later this year.

There is a gap in the Science committee's schedule the week of March 10th. I urge you to hold public hearings on funding for the Institute that week. Drs. Buckley and Farrell will be available to testify along with several other noted physicists and NASA officials.

I have also contacted Chairman Somerset of the Intelligence Committee about holding closed hearings the next week and Senator Franklin, Chairman of the Senate Space Committee who was a member of the Presidential Commission of Inquiry, urging him to hold Senate hearings.

I firmly believe that if we take action now we save future and look forward to working with you to do so.

I'll have my chief aide, MacDonald, contact your chief aide to discuss the details for the hearings.

Sincerely Yours,
Jason Breck
JASON BRECK

THE JOINT COMMITTEE ON INTELLIGENCE

INTERNAL MEMORANDUM

May 23, 1975

To: Members of the Joint Subcommittee on Intelligence, Science

From: Majority Committee Staff

Re: Closed Hearing on Hasslein Institute of Temporal Physics

I. Summary

On Tuesday, May 22, 1975, at 10:30 a.m., the House and Senate Joint Subcommittee on Intelligence, Science held a closed hearing on funding appropriation for the proposed Hasslein Institute of Temporal Physics.

The meeting was chaired jointly by Senator Hazeltine and Representative Somerset. In attendance were Senators Wilkens, Smith, Moorehouse and Lee; and Representatives Cheney, Stein, Breck and McConnell.

Testimony was given by operatives of the Central Intelligence Agency, identified only as E-1 and E-2 for purposes of security, who participated in the interrogation of the intelligent chimpanzees from the future, Cornelius and Zira, under the guidance and supervision of the late Dr. Otto Hasslein. Recordings of those interrogations were reviewed by the subcommittee.

Discussion followed on the usefulness of the Hasslein Institute in further investigating and preventing the future events related by the chimpanzees during their interrogation.

Reps. Cheney and Breck proposed that operatives of the intelligence community be installed in key positions in the Institute. Drs. Buckley and Farrell would be not informed of these operatives and be allowed to believe that they were truly in charge of the Institute but would in fact be figureheads and pawns.

Sen. Hazeltine recommended that Lieutenant Malcolm Jones of the Navy be appointed as NASA liaison to the Institute. Lt. Jones served in Naval Intelligence for several years and was recently recruited into the astronaut program. CIA operative E-2 informed the Subcommittee that a prominent physicist is currently a CIA asset and could appointed to the staff of the Institute.

II. Determination

The Subcommittee voted 9 to 1 to recommend the funding appropriation of the Institute to the full Congress and 7 to 3 to approve all of the recommendations discussed.

III. Attachments

A. Full transcript of the Subcommittee hearing.

The Washington Post

WEDNESDAY, JULY 23, 1975

CONGRESS APPROVES $200 MILLION IN FUNDING FOR HASSLEIN INSTITUTE

Rep. Jason Breck, Science Committee Chairman Sen. John Wilkens and Rep. Charles Somerset during the Congressional hearings on the Hasslein Institute of Temporal Physics earlier this year.

The Senate and the House have approved a $200 Million appropriation to establish the Hasslein Institute for Temporal Physics in memory of the late Physicist Dr. Otto Hasslein who served as the chief scientific advisor to several Presidents and as a consultant to NASA on the ANSA program. The appropriation bill received wide bipartisan support in both houses of Congress, passing in the House by a vote of 358 to 78 and in the Senate by a vote of 82 to 17.

The effort to pass the bill was spearheaded by Representative Jason Breck of New Jersey's 12th district, where the Institute will be located. Rep. Breck has been rising within the ranks of the House in recent years and is expect to be chosen as the next Deputy Whip of his party's caucus. However, many believe that he championed the bill to further even greater political ambitions including a possible run for a Senate seat in a few years.

The late Dr. Hasslein was murdered by the Ape-o-nauts, Cornelius and Zira, in November of 1973. Since his death, he and his theories have gained almost a mythic status within the world scientific community. Calls for the creation of an institute in his name followed thanks to an article in last November's issue of Scientific American magazine. That article was written by Dr. Joseph A. Farrell of Fordham University, a widely respected Physicist who will be one of the Directors of the new institute.

Dr. Farrell testified during the House Science Committee hearings in March. Nobel prize winning Physicist Dr. Daniel Buckley of Princeton also testified at those hearings in support of the Institute as did the President of Princeton and the Director of NASA. The only dissenting voice against the Hasslein Institute during those hearings was from a Dr. S. Cooper, a little know Physicist from CalTech.

While the Hasslein Institute will be an independent entity under the umbrella of Princeton University, it will serve as a research and development facility for NASA much like the Jet Propulsion Laboratory in California. The Institute's primary assignment will be analysis of temporal data from NASA's Advanced Nuclear Stellar Acceleration Project. ANSA flights will resume later this year after a three year suspension to investigate the disappearance of the project's first two flights from NASA's tracking a few months after their launch, as well as the reappearance of the first off the coast of California in September of 1973 crewed by the Ape-o-nauts.

The $200 Million funding appropriation passed by Congress will go to the cost of building the Institute's facilities in New Jersey. All further appropriations to maintain the Institute will be included in NASA annual budget starting next year.

Daniel Buckley, Sc.D.
Institute for Advanced Study
School of Natural Sciences
Einstein Drive
Princeton, NJ 08540

Daniel,

Thank you and your wife again for the wonderful dinner party at your beautiful home to celebrate Congress' approval of the funding for the Institute. And thank your wife for introducing me to Cynthia. I plan on seeing her again when I move to New Jersey next month.

I can't believe that our dream for the Hasslein Institute is becoming reality so quickly. I had expected Congress to take years to approve the funding. Now that we have the funding, we need to move quickly. I liked the site that you found in Windsor. It is perfect for our needs, close enough to Princeton to use their resources when needed but far enough away to maintain our independence. We should make a bid on it immediately.

Speaking of making a bid, I'm still a little unsure as to the proper procedure for authorizing payments from the $200 Million fund. There are a lot of government regulations and forms needed just to cut a simple check. Congressman's Breck assistant, MacDonald, offered to walk us through the procedure. We should take him up on the offer as soon as he is available.

There is so much to do to get the Institute up and running by next September. After we secure the site in Windsor, we need to find an Architect to design our facility and a contractor to build it. Senator Armbruster sent me a list of government approved architects and contractors that we can choose from. A copy is attached.

The Director of NASA has forwarded his recommendation for our liaison officer, a Lt. Malcolm Jones. He is a recent recruit to the astronaut corps and graduated Annapolis with a degree in Astrophysics. We need to schedule a meeting with him as well. Also, I have also been receiving inquiries from physicists around the world who are interested in working at the Institute. We need to come up with a standardized application process to screen all of them. The few I've already spoken have impressive credentials but it is too soon to make any final decisions just yet.

I have yet to submit my resignation here. I plan to within the next two weeks. After I do so, I'll be packing and preparing for my move. I should be fully moved the week after Labor Day. Then we can really dive in to all this work to set up our Institute. Looking forward to it and with working with you.

See you in a few weeks.

Your friend,

Joseph Farrell

Joseph Farrell, Ph. D.

Covert Operation and Incident Report

REPORT ID:	CLASSIFICATION:	OFFICER REPORTING:	DATE:
JR-18670-GS3	Ultra Top Secret	Lt. Malcolm Jones	October 24th, 1975

SUMMARY	On Oct. 23rd I met with Doctors Farrell and Buckley, the Directors of the Hasslein Institute, in regard to my possible appointment as NASA's liaison officer to their Institute. Both men questioned me on my scientific studies and my knowledge of temporal physics. I believe that I impressed them both with my answers. However, Dr. Farrell seemed a bit more skeptical of the two. Although they were non-committal at the end of the meeting, I believe that they will have no objection to me being appointed as liaison officer.
DETAIL	Pursuant to the directive of the Congressional Joint Subcommittee on Intelligence, Science; on July 30th of this year, the Director of NASA forwarded my name to Dr. Joseph Farrell and Dr. Daniel Buckley as his recommendation for the position of Liaison Officer between NASA and the Hasslein Institute for Temporal Research. After waiting several weeks I received a letter from Dr. Buckley on September 17th in regard to the Director's recommendation. In his letter Dr. Buckley requested a face to face meeting with him and Dr. Farrell. After a slight back and forth on dates and availability, the meeting was scheduled for October 23rd at 11AM. The meeting took place in Dr. Buckley's office at Princeton. He and Dr. Farrell are currently sharing it, using it as their HQ until the Institute's facilities can be built. Both men were very cordial. They showed me the architect's plans for the Institute and a map of the plot of land they recently acquired in nearby Windsor that will be the site of the Institute. They said they are expecting to break ground shortly after the new year with the goal of opening the Institute next September. I believe the architect and contractor they have chosen have been used by both the CIA and ONI before. I would recommend that, without Farrell and Buckley's knowledge, a small covert section be added to the facility, perhaps underground, which will only be accessible to myself and the other agents being placed inside the Institute. My impression of Farrell and Buckley is that they are dedicated academic types, eggheads, but a bit naïve to the ways of the real world. From his questions, Dr. Buckley the more politically knowledgeable and savvy of the two. However, I doubt either man suspected my true role and will be easily guided to follow whatever lines of research that we want them to pursue, making their Institute a valuable tool for the military and intelligence community in the future.

THE NEW YORK TIMES **NATION** TUESDAY, NOVEMBER 11, 1975

Successful Launch Resumes ANSA Program

CAPE KENNEDY - After a hiatus of over three and a half years, NASA launched the third mission of the Advanced Nuclear Stellar Acceleration program (ANSA). The ANSA III mission is a test flight of the new nuclear fusion drive that, unlike its predecessors in ANSA I and II, is said to be capable of exceeding the speed of light.

The three astronauts on the ANSA III crew are commanded by John Young, a veteran of the Gemini and Apollo programs. This is his fifth space flight and is only one of two astronauts who has travelled to the moon two times during the Apollo 10 and 16 missions, becoming the ninth man to walk on the moon during the latter mission. Alan Virdon is making his second journey into space. His first was on Apollo 6, commanded by George Taylor. Virdon was to be Lunar Module pilot on Apollo 18, but that mission was canceled when funding was shifted to the ANSA program. The third and final member of the crew is Robert Crippen, a rookie astronaut. Crippen served as backup to John Brent on the Skylab I flight, but this is his first trip into space.

The goal of the ANSA III flight is short and simple: test the new drive system. Their ten day flight plan will take them to edge of the solar system and back again. If the ANSA III is successful it will pave the way to future flights to nearby stars such as Alpha Centauri.

The new drive is the result of analysis of the flight data from the ANSA I capsule that was recovered two years ago. Prior to that the ANSA program had been suspended due to the disappearance of both the ANSA I and II spacecrafts shortly after they left the solar system. At the time, many experts believed the two ships had disintegrated but the recovery of ANSA I proved those theories incorrect.

Data retrieved from the ANSA I's flight recorder vindicated the late Dr. Otto Hasslein's theory that a ship travelling nearly the speed of light would experience time dilation, or Hasslein curve, as it came to be called. When the late Dr. Hasslein proposed this theory, prior to the launch of the ANSA I mission, it spurred a major controversy inside NASA. Most dismissed Hasslein's theory, but ANSA I commander George Taylor and a few others supported it. In the end, it led to the separate 'Ship Time' and 'Earth Time' clocks being installed in the ANSA capsules.

The developers of the new drive claim that they have beaten the time dilation problem as part of the process of exceeding the speed of light. While the exact specifications of the new drive are top secret, some physicists have theorized that the new drive must in some way create a space warp around the ship, enabling it to travel faster than light. However, others dispute that and believe that the new drive must allow the ship to travel through hyperspace. NASA has not and will not comment on any of these theories.

The ANSA III will be the first assignment for the new Hasslein Institute of Temporal Research. Dr. Joseph A. Farrell, co-founder and Director of the institute was on-hand for the launch. "This is not just another spaceflight", commented Dr. Farrell, "But represents an opportunity for us to explore the universe and help us understand the nature of time and space itself. My colleagues and I can't wait to analyze the data that the ANSA III mission will bring back to us". However, the work and findings of the Institute will be top secret from the public.

HASSLEIN INSTITUTE OF TEMPORAL PHYSICS

WINDSOR, NEW JERSEY

INTERNAL MEMO

Date: January 5th, 1976

To: Daniel Buckley, Sc.D.

From: Joseph Farrell, Ph. D.

Re: Happy New Year!

Daniel,

I wanted you to be the first for receive a note on the Institute's new stationary. If not for you this stationary and the Institute itself might never exist.

I also wanted to thank you and Donna for the hospitality that you showed me and Cynthia over the holidays. Being an only child, I've haven't celebrated the holidays since the death of my parents; so you and your wife's kindness to me really means a lot. As does your introducing me to Cynthia. I really think she might be the one.

Now down to business. The initial analysis report on the data from ANSA 3 flight should be ready within the next two weeks. We'll need to review it very quickly if we are to submit it to NASA by the end of the month. We don't want to be late with our first assignment.

The groundbreaking for the Institute's permanent home is set for February 3rd. Unfortunately, that is the same day that NASA is planning for the launch of ANSA 4. One of us will need to be in Florida for the launch. Let's discuss who should go to the launch and who should stay for the groundbreaking.

Attached you will find the files on several candidates for positions at the Institute. The most promising in my opinion are: Dr. Nicholas Moore of MIT, Dr. John McQueen of Cambridge University, Professor Brett Rockford of Berkley and Dr. Charles Bartowski of Cal Tech. If any of the others stand out to you, let me know.

I'm still very undecided about the appointment of Lt. Jones as our liaison officer with NASA. I met with him again when I was at the Cape for the ANSA 3 launch and there is something about him that makes me wary. I did meet another recent astronaut recruit when I was down there, Capt. Peter Burke of the Air Force. Capt. Burke doesn't have the extensive physics background that Lt. Jones does, but I found him much more trustworthy and likeable. An added plus is that he was born and raised here in New Jersey; so trips to the Institute would not be a hardship for him.

Finally, as you know, at the launch I met Professor Jean-Luc Antelle, who designed the Nuclear Fusion Drive used on the ANSA spacecraft. I just got a note from him. He's very eager to visit and discuss our plans for the Institute. I'm thinking we should schedule his visit after the groundbreaking next month. Let me know if you agree.

Joseph Farrell

HASSLEIN INSTITUTE OF TEMPORAL PHYSICS

WINDSOR, NEW JERSEY

January 27th, 1976

Walter H. Morton
Director ANSA Project
Johnson Space Center
2101 Nasa Parkway
Houston, Texas 77586

RE: Preliminary Data Analysis: ANSA 3 Flight

Director Morton,

Attached is the Hasslein Institute's preliminary report analyzing the flight data recorded during the ANSA 3 mission in November.

To summarize, our analysis found some slight imbalances in the engine's power distribution. While these are negligible under normal conditions, they might cause problems should a future mission encounter radioactive turbulence in flight.

The good news is that the Earth Time and Ship Time clocks showed a variance of less than 0.00034. Thus, the new engine design was effective in negating the effects of the 'Hasslein Curve' which impacted the two previous missions.

Speaking of the previous missions, the Institute would still like an opportunity to analyze the flight data from the ANSA 1 craft recovered over 2 years ago. This data will be instrumental in creating a baseline to use as a comparison for all future flights.

Additionally, since this craft travelled through time; there may be valuable insights about the nature of time which can be gained by examining this data. The Institute has made several inquires for access to the ANSA 1 data, but so far there has been no response to our requests. We hope you can assist us in this regard.

Also, I will be at the Cape for the launch of the next ANSA flight next week. Unfortunately, I will be the only representative of the Hasslein Institute able to attend due to the groundbreaking for our facility being scheduled for the same day. While I'm there I hope discuss the report to answer any question you may have about it.

I would also like to meet with Captain Peter Burke, if possible, while I'm in Florida. My colleague Dr. Farrell met him when he was there for the ANSA 3 launch and was very impressed with Captain Burke. We would like to consider him as the Institute's liaison officer with NASA.

Looking forward to seeing you next week.

Sincerely,

Daniel Buckley

Daniel Buckley, Sc. D.
Director, Hasslein Institute

Dr. Joseph A. Farrell

WENDELL P. HAZELTINE
GEORGIA

CHAIRMAN
INTELLIGENCE COMMITTEE
SCIENCE COMMITTEE

United States Senate

WASHINGTON, D.C. 20510

DATE: February 5, 1976

TO: Representative Jason Breck

RE: Problems with the Hasslein Institute of Temporal Physics

PERSONAL AND CONFIDENTIAL

Representative Breck,

I had a very disturbing meeting with the Director of NASA while I was at the ANSA 4 launch in Florida earlier this week. It seems the scientists from the Hasslein Institute, which you sponsored, are not cooperating.

Dr. Buckley was there for the launch and insisted on meeting with a Captain Peter Burke of the Air Force regarding the position of Liaison Officer with the Institute. I'm sure Capt. Burke is a fine officer but the Joint Subcommittee agreed that Lt. Malcolm Jones should be appointed as Liaison Officer due to his background in Intelligence. Lt. Jones has already submitted his first Operation and Incident Report to the CIA and should have been appointed by now. However, Drs. Farrell and Buckley have resisted the appointment. This is unacceptable. We need Lt. Jones in that job to use the discoveries of this Institute for national security.

You need to get these two scientists under control. This has been your baby from the start so it is your responsibility. These two eggheads need to know who is boss. Let them know that if they do not accept the appointment of Lt. Jones that they risk losing all federal funding for their Institute in the next fiscal year. They may be the Directors of the Institute but we control the purse strings.

On another note, while at the Cape, Dr. Buckley was pushing the Director for the flight data from the recovered ANSA 1 ship. The Director is resistant to release this to civilians. NASA has covered up the fact that Lt. Stewart died during the initial flight due to breakdown of her sleep pod. This has become a highly guarded secret within NASA, the other astronauts don't know about how Stewart died. The Director is fearful that if he releases the flight data to these scientists, news of Stewart's death will leak out. Since the official story is that tragedy befell the ANSA 1 crew after they reached their destination, the Director feels that the news of Stewart's death in flight, aboard the ship, will sap what little is left of the public's confidence in the program and hurt the morale of the astronaut corps.

However, I would support releasing the flight data to Buckley and Farrell if they prove themselves worthy of trust. They can do so by accepting Lt. Jones as Liaison Officer. His appointment with show that they can be relied upon to cooperate when needed.

So you now have a carrot and a stick to use with these scientists. Use them effectively, Breck. I remind you that this if you fail; certain party fundraisers for your upcoming re-election campaign might start declining your phone calls.

I expect to hear back from you with the good news about Lt. Jones' appointment by the end of next week.

To: Joseph Farrell, Ph. D.

From: Daniel Buckley, Sc.D.

Re: Washington D.C. Meetings

Joseph,

This is to bring you up to date on my meetings in Washington last week. For the obvious reasons, I want this all to be on the record in writing.

I met several times with Rep. Breck and the Director of NASA, both separately and one time together. They insist that we accept Lt. Jones as our official liaison officer. They feel is the best qualified officer in the astronaut corps for the job. I can't argue with them about that. When I voiced our feelings that we didn't feel completely comfortable working with Jones, they said that our objections were frivolous and not worthy of scientists. Again, I really couldn't argue with them and felt a bit foolish afterwards.

In one of my meetings with Rep. Breck, he also suggested that if this is an example of the type of cooperation the Institute will show in the future; certain funding appropriations may be diverted to other facilities. I don't think this is a bluff on his part. Rep. Breck is someone who I'd rather have as an ally than an adversary. Thus, I think have no choice but to accept Lt. Jones' appointment even if we are not that happy with it.

On the brightside, Breck pressed the Director to release the ANSA 1 flight data to us as soon as is possible. The Director was still reluctant to do so but Breck pointed out that the analysis of this data is one of the primary reasons that the Institute was established in the first place. The Director could not argue with that and hopefully we should have the data in a few weeks. When we finally do get it, I think you should be in charge of the analysis of it. I hope you are willing to take on this project.

Finally, Rep. Breck also inquired about our progress in building our facility in Windsor and in staffing the Institute. I informed him that so far the contractors are on schedule and that the main building will be ready to open in August. He was very happy about that. My guess is since he's up for re-election in November, he wants to use the opening of the Institute to help his campaign.

I also informed him that in terms of staffing, we have already accepted the applications of Dr. Moore, Prof. Rockford and Dr. McKay. All of whom will be joining us over the next six months. He urged us to speed up the hiring process to make sure that we are fully staffed by the time we open the main building in August.

Let's find the time to discuss all this face to face sometime this week. Maybe over lunch or dinner this weekend. Donna would love to have you and Cynthia over to the house again. Let me know if you two are available.

THE JOINT COMMITTEE ON INTELLIGENCE

INTERNAL MEMORANDUM

April 1st, 1976

To: Members of the Joint Subcommittee on Intelligence, Science

From: Majority Committee Staff

Re: Closed Hearing on Hasslein Institute and other projects

I. Summary

On Wednesday, March 31, 1976, at 9:00 a.m., the House and Senate Joint Subcommittee on Intelligence, Science held a closed hearing on several issues including the Hasslein Institute of Temporal Physics.

The meeting was chaired by Senator Hazeltine. In attendance were Senators Wilkens, Smith and Lee; and Representatives Cheney, Stein, Breck and McConnell. Senator Moorehouse and Rep. Somerset were unable to attend.

Representative Breck reported that he was personally able to secure the appointment of Lieutenant Malcolm Jones of the Navy as NASA liaison to the Institute.

Additionally, Rep. Breck has promised that NASA will release the flight data from the ANSA 1 spacecraft to the Institute. Senator Wilkens expressed the concern that the details of Lt. Stewart's death in flight might leak out if the data is released. This information has been suppressed from the public as well as from most at NASA, including the astronauts, and would cause a political firestorm if leaked.

Senator Hazeltine supports the release of the data and is confident that the Directors of the Institute can be trusted and controlled. He also pointed out that a unnamed physicist, who is a CIA asset, has proposed a plan in which astronauts can be sent into the future to prevent certain events. To do so, NASA would need to develop a controlled temporal drive. The Hasslein Institute's analysis of the ANSA 1 data would be key in the development of that drive.

On a separate topic, Senator Lee asked for the subcommittee's support for Project Gabriel's Horn currently being reviewed by the Armed Services committee. Because the project is Ultra Secret all details of have been redacted from the full transcript.

II. Determination

The Subcommittee voted 7 to 1 to release the ANSA 1 Flight data and 6 to 2 to forward a recommendation of Project Gabriel's Horn to the Armed Services committee.

III. Attachments

A. Full transcript of the Subcommittee hearing.

SUMMARY REPORT

DATE: 5/24/76	**REPORT ID:** 4647JKK-564GHG	**PROJECT:** ANSA 1 Flight Data Analysis
PROJ. LEADER: Dr. Joseph Farrell	**PROJ. TEAM:** Dr. Moore, Prof. Rockford, Dr. McKay	
CLASSIFICATION: Top Secret	**PROJ. LOCATION:** Princeton Lab.	**DISTRIBUTION:** NASA DOO

FINDINGS

The ANSA 1 spacecraft was launched from Cape Kennedy on January 14th, 1972, leaving Earth orbit two days later to begin its journey to Bellatrix. Upon passing the orbit of the moon three days later, the ANSA 1 engaged its nuclear fusion drive at 10% capacity.

As it neared the edge of the solar system, the ANSA 1 began to gradually increase the drive until at 92% capacity. All contact was lost with NASA ground stations on Earth at that time. While it was initially believed that the ship had disintegrated, the ship's flight data recorder shows that the craft and its crew had become subjected to the time dilation effect predicted by the late Dr. Hasslein, also known as the Hasslein Curve.

According to the flight data, despite the loss of contact with Earth, the crew continued on their mission and duties even sending back several radio transmissions to Earth. Unfortunately, due to the Hasslein Curve, these transmissions will not reach Earth for decades, even centuries.

After six months in deep space the crew retired to their hibernation pods to conserve resources as planned. It was shortly after the crew were all in hibernation that an event happened which greatly impacted their mission.

The ANSA 1 encountered a massive gradational force (perhaps a previously uncharted black hole) which diverted it far off its course. The stress on the ship by the gravitational force damaged the hibernation pod of Lt. Stewart causing as air leak which killed her in flight. Fortunately, this seems to be the only damage to the ship. As was mission protocol, the ship's computers unable to return to its original course to Bellatrix, rerouted the craft back to Earth.

When the ANSA 1 returned to Earth, a fault in the flight programming had dire consequences. The original fight plan called for the ship to land on an Earth-like planet in the Bellatrix system, enabling it to be re-launched for its return journey to Earth where the command capsule would splashdown. Since the ship never landed on another planet its programming was in conflict. Thus, the ship splashed down uncontrolled with the landing and re-launch stages still attached. Since these stages were not designed to be underwater, the ANSA 1 began to sink shortly after splashdown. Fortunately, the ship went in a shut down mode to protect vital components when it sank. The date on the ship's Earth Time chronometer at the time of shut down was 11/25/3978.

Sometime later the ship was re-activated, how and by whom is unknown. The ships computers went on automatic mode and mysteriously the chronometers were reset to the year 3955. A few weeks later the ship was re-launched using the automated flight system. Shorty after the ship reached orbit it encountered a massive shock wave and a type of radiation that has never been encountered before.

After this event the chronometer began to cycle back until it reached the year 1973 and the automatic re-entry sequence was activated by the flight computer. The ANSA 1 then splashed down off the coast of Southern California. The rest is of course a matter of public record.

The radiation that the ship encountered after the shock wave is very much a mystery. Dr. Moore has theorized that it may caused by some type of random temporal anomaly. But that remains to be seen.

The full detailed analysis report is attached.

RE: Hasslein Institute Data Analysis

Senator Hazeltine,

I wanted to inform you and the other members of the Intelligence Committee that we have received the initial analysis of the ANSA 1 flight data from our colleagues at the Hasslein Institute and we couldn't be happier with the results.

In their analysis, they have identified a new type of radiation that the ANSA 1 craft encountered when it spiraled back in time before splashing down off the coast of California in 1973. I have directed them to focus their research on a better understanding of this radiation with the goal of recreating it in their lab. While our knowledge of this radiation is still in a very early stage, its potential could be enormous.

I don't want to get ahead of myself but if their experiments pan out, but this could be the first step in developing the controlled temporal drive that has been discussed. If this drive is possible, we will need to also develop a set of mission goals and a flight plan. I have spoken with Lt. Jones and he is agreeable to assisting in this effort. The only problem that I can foresee is that most of the other astronauts may be resistant to cooperating but there are ways we can force them to cooperate if need be.

Also, our ultimate goals need to be kept hidden from the directors of the Hasslein Institute. Their scientific sensibilities and principles might not conform to what we would be proposing. Best to keep them in the dark for now so that they will continue their research. In the meantime, it will be imperative to maintain funding for the Institute and perhaps increase it.

It would also be a good idea to plant more operatives inside the Institute to better monitor and control their work. There are several Physicists in the field who I could recommend who would be open to this. I can forward their names to the Committee if so desired.

Finally, we have another launch set for the 8th of next month. I plan to be at the Cape for it. I hope you and other members of the Committee will be able to attend. If so, we can discuss these matters further in private. If not, I'll be in Washington in August and we can discuss then.

Sincerely,

Walter H. Morton

INTERNAL MEMO

Date: July 7th, 1976

To: Joseph Farrell, Ph. D.

From: Daniel Buckley, Sc.D.

Re: Dedication Ceremony

Joseph,

I just got off the phone with the contractor and the first building of our new facility won't be ready in August as planned. Because of this we'll have to push the dedication ceremony to September. I hope this will not interfere with any of our current projects.

According to the contractor, we should be able to move in the week after Labor Day. We can have the dedication ceremony the very next weekend on Sunday, September 12th. I have yet to inform Rep. Breck of the delay. He was planning to use the ceremony to kick-off his re-election campaign so he might be a bit upset by the later date. I know you don't think that politics should be our concern but Rep. Breck has been our greatest ally in Washington. Keeping him happy and in Congress will ultimately work to our advantage.

Several NASA officials will be attending the ceremony and they wish to have several meetings regarding our analysis of the ANSA 1 flight data while they are here. They seem very excited about this new form of radiation that your team discovered and they wish to discuss any and all further implications. The meetings had been scheduled for the week following the dedication ceremony but thanks to the delay we may have to move them to the week prior. I'll let you know how the schedule works out.

Several of our new staff members including Dr. McQueen and Prof. Sterling are due to arrive in August. Because the new facility won't be ready, we'll need to find them temporary office space. Let's try to sit down and work this out when we both have time.

I almost forgot, I have to go to Washington for several meetings in two weeks. I need to be there for the whole week but would like for you to join me for the last two days. We'll be meeting with Rep. Breck and several other influential members of Congress. We might also have an opportunity to meet with the President so it will be good if you are there.

Finally, I'm sorry that you couldn't make our bicentennial party last weekend. Though I understand why you and Cynthia wanted to go up to New York for the festivities there. Those sail boats looked impressive on TV so they must have been spectacular in person.

However, by missing the party you missed our big announcement, Donna is three months pregnant. We've been trying for over five years now, so we are really excited. Of course I'll need some time off in January when the baby is due.

That's it for now. Let's try to have lunch sometime this week to discuss these matters further. Everything is moving a such a positive direction for the Institute, we really need to keep the momentum going.

Covert Operation and Incident Report

REPORT ID:	CLASSIFICATION:	OFFICER REPORTING:	DATE:
GD-26801-RD2	Ultra Top Secret	George Kaplan	August 10th, 1976

SUMMARY	Debriefing session with agency asset embedded in the Hasslein Institute of Temporal Physics. Session took place on July 22, 1976 at agency safe house in Washington, D.C.
DETAIL	Agency asset, who has been given the code name Caligari, submitted a report on his activities working at the Hasslein Institute. He also passed on the detailed study of the Institute's analysis of the ANSA 1 spacecraft that was submitted to NASA. Caligari believes that if the radiation discovered in the analysis can be harnessed correctly, it can be used by a future ANSA spacecraft to travel to a specific point in the future. He has submitted a plan to send a crew of astronauts to point just before the planet was allegedly destroyed (based on the testimony of the chimpanzees Cornelius and Zira) and for that crew to take action to prevent that event. While the agency finds Caligari's plan intriguing and is aware that the director of NASA fully supports the plan; it is recommended that until the science and mechanics of the proposal are proven to work, the plan should not be a priority. Caligari has been overseeing the construction of the secret levels underneath the main Institute building. He is sure that none of the other Institute staff are aware of these levels. Caligari has been working closely with the contractor, whom we assigned to the project, and the construction of the main building has successfully hidden that of the underground levels. They both are confident that these secret levels will be completed by the dedication of the Institute's main facility in September. A list of other agency assets who we would like to be embedded in the Institute was given to Caligari. He stated he would do his best to have them hired but couldn't guarantee it. All hires have to approved by the Institute's two directors and so far Dr. Farrell has been very particular as to whom they take on as members of their staff. It was stressed that it is a top priority for more assets to be hired by the Institute. The next debrief with Caligari is scheduled for October 26th here in Washington. Caligari's report and a full transcript of this session is attached.

HASSLEIN INSTITUTE OF TEMPORAL PHYSICS

WINDSOR, NEW JERSEY

MEETING MINUTES
September 9, 1976

ATTENDEES
HASSLEING INSTITUTE: Dr. Joseph Farrell, Dr. Daniel Buckley, Prof. Brett Rockford, Dr. John McQueen, Dr. James Moore.

NASA: Walter M. Morton, Lt. Malcolm Jones, Dr. Alec Parker, Nathan Spencer, Prof. Jean-Luc Antelle.

MINUTES
Dr. Buckley opened the meeting with a review of the data analysis of the recent ANSA test flights. Imbalances in the ANSA 3's engine's power distribution have been corrected and not exhibited during the other ANSA test flights.

Prof. Rockford reviewed the data from the ships' clocks. The temporal variance of 0.034 measured during the ANSA 4 flight remained constant, neither increasing or decreasing.

Mr. Morton noted that since the recent test flights have been successful, plans are to reactivate the full ANSA program. The plan is to begin with short flights starting with an exploration of Alpha-Centuri. Prof. Antelle noted that many at NASA believe the failure of the ANSA 1 & 2 flights was due to the destination being to ambitious, too far away from our own solar system. He believes that shorter flights will be safer with as much opportunity for exploration in our own neighborhood of the galaxy.

Lt. Jones outlined the mission plan. The first mission to Alpha-Centuri, ANSA 5, will be launched early next year. It will take six months to reach its destination. Once there, the crew will spend a month doing a full survey of the Alpha-Centuri system and then return to Earth. Total round trip time 13 months.

Mr. Morton explained that once the survey of the system is made, more flights will be scheduled to survey and explore each planet in the Alpha-Centuri system. When the first mission returns, all data collected will be made available to the Hasslein Institute for analysis.

Dr. Farrell reviewed the Institute's analysis of the ANSA 1 data. Dr. Parker asked if it would be possible to replicate the temporal radiation that the ship encountered when it spiraled back in time. Dr. Queen noted that he is currently working on that project now and hopes to have some conclusive results by the end of the year.

Mr. Morton asked that if these experiments are successful would it be possible to construct a temporal drive for ANSA ships. Drs. Farrell and Buckley and Prof. Antelle were all highly skeptical. Dr. Farrell also questioned the purpose for such a drive. However, Drs. McQueen and Moore stated that it might be possible depending on the results of the tests.

Mr. Spencer directed the Institute to focus its efforts on the temporal radiation experiments.

Dr. Buckley adjourned the meeting.

THE NEW YORK TIMES **SCIENCE** MONDAY, SEPTEMBER 13, 1976

Hasslein Institute is Dedicated

WINDSOR, NJ - The Hasslein Institute of Temporal Physics officially opened its doors yesterday. The dedication ceremony of its first facility was attended by dignitaries from the both the worlds of science and politics.

Dr. Daniel Buckley, one of the Institute's Directors, acted as the M.C. during the ceremony. Dr. Buckley gave the keynote speech in which he paid tribute to the late Dr. Otto Hasslein, for whom the Institute is named, as a trailblazer in the field of Temporal Physics. He also praised his fellow Director, Dr. Joseph Farrell, for his leadership in the establishment of the Institute, as well as Rep. Jason Breck, whom he credited for spearheading efforts in Washington to secure funding for the Institute.

Other speakers at the ceremony were Dr. Farrell, Walter Morton, the Director of NASA's ANSA program, and Rep. Breck. Morton said that the Hasslein Institute was already doing important and groundbreaking work for NASA. However, since almost of it is top secret; he couldn't comment any further. Rep. Breck's speech was more of a stump speech for his congressional campaign. He spoke mainly about how the Institute was part of his efforts to bring jobs to his district, where the Institute is located, and the state of New Jersey. Breck did praise Drs. Farrell and Buckley for their vision in establishing the Institute.

After the speeches, Buckley, Farrell, Breck and Morton joined with the President of Princeton for the ribbon cutting to officially open the Institute's first building. That was followed by a tour of the facility for the press and invited guests such as Dr. Carl Sagan, physicist Steven Hawking, Jesco von Puttkamer of NASA and actor/singer Sammy Davis, Jr. The tour was limited to only a few floors and labs due to the top secret nature of the Institute's research. During the tour several of the Institute's staff were introduced, including Dr. John McQueen, Prof. Roger Sterling and Dr. James Moore. All noted scientists in the field of physics.

There are at least two more buildings planned for the Hasslein Institute over the next five years and possibly more after that. However there are some who feel the money could be better elsewhere. Dr. Sagan has called Temporal Physics 'junk science' in the past and seemed unimpressed by the tour of the facility. He declined to comment when asked if his views has changed after the tour. So did von Puttkamer who had a long rivalry with Dr. Hasslein during their years at NASA. Hawking was more positive saying that he expects important discoveries from the Institute.

CHAIRMAN
INTELLIGENCE COMMITTEE
SCIENCE COMMITTEE

United States Senate

WASHINGTON, D.C. 20510

DATE: November 9th, 1976

TO: Representative Jason Breck

RE: Committee Issues

PERSONAL AND CONFIDENTIAL

Jason,

Congratulations on your landslide re-election victory last week. You've become a rising star in our party and we need to discuss your future. There will be an open Senate seat in your state in the mid-terms. I can't think of a better candidate to win that seat for our party.

As you know, Charlie Somerset was defeated last week and won't be returning in January. That makes you the senior member of the House on the Joint Committee. Rep. Stein retired and won't be coming back either. I'd like your recommendation as to who from the House should take their place on the Committee.

There will be no changes on the Senate side since only Sen. Moorehouse was up for re-election this year and he won in walk. Too bad, I'd like to get him off the committee at some point. Replace him with someone who is more in line with our worldview.

When the committee reconvenes in the new Congress there are a few issues that we need to address.

The first is Senator Lee's project, Gabriel's Horn. He's getting a lot resistance for the project in the Armed Services committee. He wants to move oversight of it to our committee. I support this but we need to find a legal reason, or at least a procedural rule, to find a way to move the project. Put some thought into the problem and let me know if you come up with anything we can do.

Remember, Gabriel's Horn is a top priority for the Air Force and the Joint Chiefs. Having them owe us one for our support on it won't be a bad thing. However, I've requested that you and I get a full briefing on the project from General Richards before we proceed. My office will let you know when it is scheduled.

Another issue is the Hasslein Institute. I spoke with Walt Morton over at NASA just prior to the election. He said things are going well for the most part, but many times the Directors, especially Dr. Farrell, are resistant to NASA's input and direction.

The Institute is in your district and has always been your baby. You need to get these academics in line. Remind them who is funding their little experiments. They need to be more compliant with NASA's, and our, requests and stop causing us headaches.

Let's get together for lunch sometime before the Thanksgiving recess to discuss these issue further and plot strategy. Have your Chief of Staff Mr. MacDonald call mine to set it up.

HASSLEIN INSTITUTE OF TEMPORAL PHYSICS

WINDSOR, NEW JERSEY

INTERNAL MEMO

From: Joseph Farrell, Ph. D.

Re: Washington Meetings

Daniel,

Let me start by wishing you congratulations on the birth of your son. I'm so sorry that I had to be in Washington last week and missed the blessed event. As soon as you and Donna are up to it, Cynthia and I would like to come by and see the little Daniel Jr.

I did want to bring you up to date on the meetings Dr. McQueen and I had in D.C. last week. Before I forget, Rep. Breck regretted that you were unable to attend but he understood why and sends his congratulations. Breck was very courteous to us the three days we were there. He even invited us to his swearing in ceremony. A very impressive event. Made me feel very patriotic to be there.

Our first meeting was with Walt Morton and the Director of NASA. They continued to stress that the Institute focus its research on the temporal radiation from the ANSA I analysis. They even suggested that we send a team down to Florida to examine the craft in person. I have no objection to that and would like your thoughts on whom we should send.

They also continued to push the idea of creating a temporal drive. I think the idea is unlikely but Dr. Queen undercut me a bit and told them it might be possible. Also, Morton told us that the first ANSA flight to Alpha-Centari has been scheduled to launch on March 7th. He invited us to come down to the cape for it.

We had two meetings with Rep. Breck; one privately and one with Senator Hazeltine. In the private meeting, Breck informed us that Hazeltine and some other members of the Joint Committee are very keen on the idea of the temporal drive. I informed him of that it was our scientific judgment that such a drive was unlikely but Dr. McQueen undercut me again and said that it could be possible.

Breck told me to downplay my skepticism in front of Sen. Hazeltine since he controls our funding. I did so and that meeting went very smoothly.

I do have a concern about Dr. McQueen though. In addition to the two incidents that I related, on the third day of the trip he disappeared. When he returned to the hotel that evening and asked where he had been; he said he had person business to attend and is couldn't be avoided. I found that very odd since he doesn't have family there and never lived or worked in the city.

That's about it. Let me know if you wish to discuss face to face.

Your friend,

Joseph Farrell

THE JOINT COMMITTEE ON INTELLIGENCE

INTERNAL MEMORANDUM

February 22nd, 1977

To: Members of the Joint Subcommittee on Intelligence, Science

From: Majority Committee Staff

Re: Project Gabriel's Horn and other issues

I. Summary

On Thursday, February 17th, 1977, at 11:00 a.m., the House and Senate Joint Subcommittee on Intelligence, Science held a closed hearing, the first of the 95th Congress.

The meeting was chaired by Senator Hazeltine and Representative Breck. In attendance were Senators Moorehouse, Wilkens, Smith and Lee; and Representatives Cheney, Sanford, Albertson and McConnell. Also in attendance were General Michael Richards of the Air Force, Lieutenant Malcolm Jones of the Navy and George Kaplan of the Central Intelligence Agency.

The main issue on the agenda was a discussion of Project Gabriel's Horn. Specifically, how to move oversight of the project from the Armed Services Committee to the Joint Committee. General Richards testified that several members of Armed Services were resistant and slowing down the project. Rep. Cheney suggested that since the project could be classified as new technology and ultra top secret oversight could be transferred to the Joint Committee if the CIA agrees to fund the project. Mr. Kaplan could not commit to that, but promised to submit a proposal to the Director of the CIA. Sen. Moorehouse objected, stating that he and other members of the Joint Committee had not yet received a full briefing on exactly what Gabriel's Horn is. Gen. Richards promised a full briefing once oversight is transferred to the Joint Committee.

The second item on the agenda was the status of the Hasslein Institute. Lt. Jones and Mr. Kaplan testified that progress is going well. The first section of the secret underground complex has been completed, work on the second section will begin when construction of the Institute's second building begins next year. Lt. Jones reported that the Institute's study of the temporal radiation is going forward and should yield results soon. Mr. Kaplan confirmed this, based on reports from CIA asset Caligari who is embedded on the staff of the Institute. He suggested a more aggressive push for the development of a temporal drive for ANSA ships.

II. Determination

The Subcommittee voted 7 to 3 to adopt Rep. Cheney's proposal for the transfer of oversight of Project Gabriel's Horn to the Joint Committee.

A. Full transcript of the Subcommittee hearing.

The Star-Ledger

WEDNESDAY, MAY 25, 1977

PROMINATE SCIENTIST SERIOUSLY INJURED IN AUTO ACCIDENT, WIFE IS KILLED

Police examine the wreckage of Dr. Joseph Farrell's car after the accident that killed his wife.

WINDSOR, NJ—Dr. Joseph Farrell, Co-Director of the Hasslein Institute of Temporal Physics, was seriously injured in a car accident less than 3 miles from his home yesterday. The scientist's new wife, Cynthia was critically wounded in the accident.

Few details of the accident are available at this time. Witnesses say the Farrell's car collided with a large truck on Route 133 shortly after 4PM. The driver of the truck did not stop and is being sought by the police. Several of the witnesses stopped to assist and called 911 to report the accident. Police and Firemen arrived on the scene within minutes. Dr. Farrell was rushed to the University Medical Center of Princeton where he was placed in intensive care. His wife was declared dead at the scene. Doctors state that Farrell sustained major trauma to the head and spine. He is in a coma and only given a 50-50 chance of recovering.

The couple was returning home after a brief honeymoon in Atlantic City. They were married there last week in a small ceremony attended by only a few family and friends. Farrell's Co-Director at the Hasslein Institute, Dr. Daniel Buckley, was one of the few who attended the wedding. He rushed to the hospital after hearing of the accident and told reporters, "We were all so happy just a week ago, celebrating their wedding. They were so happy. This is a terrible tragedy. We can only hope now that Joe makes a full recovery".

Congressman Jason Breck's local office issued this statement, "Dr. Joseph Farrell was a pioneer in his field of science. The Hasslein Institute was his dream and he made it happen. We ask that all Americas pray for his survival and for the soul of his deceased wife". Rep. Breck was champion of the Institute in Congress and it is located in his district.

The loss of Dr. Farrell might be a blow to future federal funding for the Hasslein Institute which has generated many jobs in the area over the last two years. The first building of the Institute was opened last September and construction on it's second building was begun in just last month.

Local police have asked that anyone with information regarding the identity and whereabouts of the truck and driver that left the scene of the accident to report it to them immediately.

HASSLEIN INSTITUTE OF TEMPORAL PHYSICS

WINDSOR, NEW JERSEY

INTERNAL MEMO

Date: June 1st, 1977

To: ALL STAFF

From: Daniel Buckley, Sc.D.

Re: Dr. Farrell's condition

I wanted to let everyone know that Dr. Farrell came out of his coma on Sunday night. He is still in intensive care but his chances for survival are much greater now. That's the good news. The bad news is, according to the Doctors, the damage to his spine is so severe Joe will be confined to a wheelchair for the rest of his life. If and when Joe recovers, there will be a long period of convalescence, probably a year or more before he'll be able to return to work here at the Institute.

We have not told Dr. Farrell of the death of his wife Cynthia yet. The Doctors advised us to hold off on that until he's out of the woods. Due to this, we've delayed her wake and funeral for at least a week, until it is safe to give the news to Joe. To those who have already sent flowers, thank you. To those who haven't yet, we ask that you send a donation to your favorite charity in Cynthia's name.

In Joe's absence, Drs. McQueen and Moore to take over the team studying the temporal radiation we discovered last year. Both Drs. McQueen and Moore were vital members of Joe's team and should have no problems continuing his work. I will be assuming all of Dr. Farrell's administrative duties here at the Institute. Since the semester is over, there are no need for anyone to pick up Joe's classes. However, he did have several lectures planned over the summer at different Universities. There is a schedule attached. Let me know who can cover which lecture.

Many have been concerned about the status of the Institute now that Dr. Farrell's accident will force him to be away for so long. I can assure you that nothing will change. Congressman Jason Breck assured me of this when he called to express his sympathies and condolences. Any rumors that Congress will cut our funding is merely press speculation. Congressman Breck will not let that happen. The work we are doing here is too important. Walter Morton of NASA told me the same thing when he called.

All the Institute's projects and plans are going forward as before. Construction on our second building will continue with no interruption. So there is now need for anyone to be concerned about the future of the Institute. Just continue to do the great work you've all been doing here as if nothing has changed.

Also, the police have not been able to locate the truck and driver that hit Joe and Cynthia's car last week. I'm considering offering a reward from the Institute for any information about his whereabouts, leading to his arrest. I'd like to know everyone's thoughts on this.

Finally, I want to thank everyone here for their kind thoughts and concerns over the past week. When the terrible news of the accident reached us, I was really touched by how we rallied together during this tragedy. We've become quite a family in so short a time. Thank you.

Central Intelligence Agency

Langley, Virginia

Date: June 3rd, 1977

To: Alec Ford, Deputy Director – Operations

From: George Kaplan

Re: Hasslein Institute Asset

Alec,

I have just been contacted by our asset embedded in the Hasslein Institute of Temporal Physics (code name: Caligari). He is livid over a recent car accident that severely injured Dr. Joseph Farrell, Co-Director of the Institute, and killed Farrell's wife. Caligari is convinced that we staged the accident.

I assured him that we had nothing to do with it but he insisted that the accident was too convenient. He believes that we arranged the accident to get Dr. Farrell out of the way because he wasn't co-operating enough with the government. Specifically, Farrell had been very resistant to the direction NASA wants to take research of the temporal radiation the Institute discovered analyzing the ANSA I spacecraft. Caligari said that while Farrell was being difficult, he was not blocking any of the research so there was no need for us to try to take him out.

When I again told him that the CIA had nothing to do with the accident, he accused me of lying and threatened to go public. If he did, it would not hurt the agency. He doesn't have much on us and he'd never be able to prove his accusation that we arranged Farrell's accident. However, the information he has would be very embarrassing to NASA and to certain members of Congress on the Joint Committee.

I promised Caligari that I would personally begin an internal investigation to determine if the agency had anything to do with Farrell's car accident or if it was the work of any other intelligence agency. This calmed him down for the moment and should keep him quiet. However, I think it unlikely anyone in the government had anything to do with this accident. It was a random event. Dr. Farrell was a minor annoyance at best and not important enough for such an operation.

Since I did promise to investigate, I'll need your authorization to view files on everything and everyone associated with the Hasslein Institute. I'll also need access to any files being kept by the FBI, NSA, etc.

I should have this all wrapped up in a week or two. It would also help if the New Jersey State Police could find the hit and run driver who rammed Farrell's car. Maybe if they can give us a description, we can run it though our database and come up with an ID.

Let's discuss.

RE: Project Gabriel's Horn/Hasslein Institute

Chairman Hazeltime,

I just met with Senator Moorehouse and Representatives Sanford & Albertson from the Joint Committee. They insist on a full briefing on Gabriel's Horn before authorizing any funds for the project. Now that oversight for the project has been transferred from the Armed Services Committee; they feel there should be real scrutiny of what the Air Force is doing. They also feel that General Richards has been stonewalling them in regard to turning over documents pertaining to the project as well as scheduling the full briefing he promised months ago.

I have to say that I share their frustration. No one in the General's office has responded to any of my requests for information on the project either. I supported the transfer of oversight to the Joint Committee with the understanding that we would be fully briefed about Gabriel's Horn. That has not happened and Senator Moorehouse is threatening a hold on any new funding for the project.

I implore you to use your pull with General Richards to set up a briefing for the full Committee before the vote on next year's budget in the fall. You're the only one on the Committee who has the power and influence to do this.

On another matter, I'm sure you heard about Dr. Joseph Farrell's car accident several weeks ago. The good news is that Dr. Farrell is well on the road to recovery. I visited him last and his injuries were not as bad as I expected. He'll need months of therapy before returning to work at the Institute. Luckily, several of the other scientists there have taken over his research and are making good progress. Walt Morton at NASA seems very pleased.

The bad news is that the CIA's embedded asset at the Institute in open revolt. The asset believes the CIA staged the accident because Dr. Farrell was being difficult in regard to the government's requests and direction. The asset is refusing to hand over any more documents from the Institute.

As Co-Chair of the Joint Committee, I checked with every covert agency and can assure you that they had nothing to do with Dr. Farrell's accident. However, the CIA feels the only way to prove this to the asset is to catch the driver of the truck that hit Farrell's car. In order to do this, the CIA needs access to the FBI's database. However, they are forbidden to do so unless it is authorized by an act of congress. My staff is all ready working on wording of the resolution and will submit it at the next meeting of the Joint Committee. I hope that I can count on your support to get it approved.

Sincerely Yours,
Jason Breck

ANSA V REACHES ALPHA CENTAURI

STAR WARS may be the box office hit of the year but the big space story of 1977 is the successful mission of the ANSA V in reaching the Alpha Centauri system. This is a triumph for NASA's Advanced Nuclear Stellar Acceleration project after two failed missions that resulted in a four year long suspension of the program.

It was just after 2AM in Houston when mission control received the signal from the Astronauts aboard the ANSA V confirming that they had reached the edge of the Alpha Centauri system. Due to the great distance, there is no direct contact between mission control and the spacecraft nor are voice or video transmissions possible. Signals from the ANSA V take over three days to reach Earth and consist of only text & still photographs. Also, it was not possible for the craft to send messages of any kind during the 5 day deceleration phase of the mission.

So after a week of silence, there was jubilation in mission control when the message came in stating, "ANSA V reporting from Alpha Centauri, deceleration phase complete". But that jubilation was nothing compared the reaction of the NASA controllers when the first photos of the Alpha Centauri solar system were received 83 minutes later. Many in mission control wept when the first pictures appeared on their computer screens.

After several hours of signals from the ANSA V astronauts, Director of the ANSA project Walter H. Morton held a press conference and announced that the initial survey of the system showed a total of 12 planets. Several are gas giants at the edge of the system. However, there appears to be five planets in what is called the 'habitable zone' of the system. Morton said the plan is now to launch five missions, one to each of the planet in the 'habitable zone'. These missions will survey each planet from orbit to determine if it can support life. If any of them can, additional missions, capable of landing, with be sent to explore further. Of course, Congress will have to approve funding for these new ANSA missions. The ANSA V will remain in the Alpha Centauri system for another week to complete its survey of the system before beginning the six month journey back to Earth.

Photo of the Alpha Centauri solar system sent back by the Astronauts aboard the ANSA V spacecraft.

Launched last March, the ANSA V is commanded by Ken Mattingly, a veteran Astronaut who was command module pilot on Apollo 16. Along with Young are rookie Astronauts Malcolm Jones and Joe Engle. All three Astronauts are destined to be remembered alongside the crews of other historic missions such as Apollo 8 and Apollo 11.

The true heroes of this mission may be the designers of the ANSA ship's engines. Professor Jean-Luc Antelle is credited as the main force behind the top secret drive system. After the loss of the ANSA I and II spacecrafts, he went back to the drawing board and completely revamped the engines, overcoming the light speed barrier and the time dilation effect in the process. Professor Antelle is very modest and praises the hard work of his team and the support from NASA. He also commends the work done by the Hasslein Institute of Temporal Physics in their analysis of the ANSA I's flight data.

Dr. James Moore of the Institute was in mission control when the first signal from ANSA V was received. He is grateful for the recognition of the Institute's small role in this mission and hopes that it will contribute more significantly in future missions. Dr. Moore is currently filling in for Dr. Joseph Farrell, who was severely injured in a car accident last May. The truck driver who hit Farrell's car was arrested last week after a five state manhunt coordinated by the FBI.

HASSLEIN INSTITUTE OF TEMPORAL PHYSICS

SUMMARY REPORT

DATE: 11/17/77	**REPORT ID:** 5456UIT-467AHJ	**PROJECT:** Temporal Radiation Experiments
PROJ. LEADER: Dr. McQueen/Dr. Moore	**PROJ. TEAM:** Prof. Rockford, Dr. McKay, Dr. Cox	
CLASSIFICATION: Top Secret	**PROJ. LOCATION:** HITP Lab. #129	**DISTRIBUTION:** NASA DOO

FINDINGS

Over 273 tests have been conducted to recreate the Temporal Radiation discovered in the analysis of the ANSA 1 spacecraft (see attached report for the details of each of these tests). The first 258 of these tests were totally unsuccessful.

Test #259 generated a small field of radiation that was within 1.7% variance of the readings from the ANSA 1 for a total of 0.034 seconds. Continuing down the path of #259, the field was recreated in six of the next ten tests.

In tests #261, 263 and 267, the field was brought within 0.6% variance of the ANSA 1. Test #264 was successful at increasing the overall size of the field. Tests #266 and 269 extended the time of the field to a total of 52.621 seconds.

Starting with test #270, the field was able to be both increased in size and duration while maintaining a 0.6% variance. By test #272, the field generated was over five square feet in size and was maintained for over 3 hours.

In test #273, the field was generated around a small atomic clock. The smaller clock was synchronized with Institute's main atomic clock. After the clock spent over 30 minutes in the generated radiation field, it was compared to the main clock again. There was a difference of 15.64 seconds between the two atomic clocks. The smaller clock ran slightly slower inside the radiation field.

Full analysis of the data from this test is still ongoing. However, it can be concluded that time passes differently inside the radiation field. Just how the field can be manipulated remains to be seen. Can time be greatly accelerated or just slowed? Is it possible for the flow of time to be reversed to run backwards? These are all unknowns issues. Many additional tests will be needed to determine what is (and what is not) scientifically possible.

For the moment all testing has been suspended until after the Thanksgiving break. However, testing will be limited in the current laboratories available. It might be wise to suspend additional tests until the Institute's second building is open in January. Several of the labs there are two to three times larger than are currently available. It would also give the team more time to analyze the data from the last few tests before trying to recreate the radiation field again.

Also, it would be helpful if ANSA 1 capsule is moved to the Institute. The labs in the new building are big enough to accommodate it. With direct access to the ANSA 1, data from all future tests can be directly compared with the capsule.

The full detailed report is attached.

RE: Temporal Radiation Tests

Dr. Buckley,

We have reviewed the Institute's report on the tests that successfully recreated the Temporal Radiation from the ANSA I capsule. Everyone here at NASA is very excited about your breakthrough. Our team is still analyzing the data supplied by the Institute, but have identified several areas of interest and concern.

- It was noted that in the second round of tests there was little or no success in manipulating the radiation field beyond the parameters in the first round of tests. Any theories on the failures?
- In test #315, there was a slight gravitational variance which might explain the failure to manipulate the field.
- Test #342 showed an anomalous power fluctuation after 38 minutes that collapsed the field. Does the Institute have an explanation for the variance?
- Test #357 had the greatest success in manipulating the radiation field. However there were so many variables it is hard to determine which had the greatest effect.

In terms of moving forward, we plan to recommend to Congress that the Institute's funding be increased to complete the tests. We hope that it will be approved within the next few weeks.

Additionally, a key component of a military satellite scheduled to be launched in October will not be ready in time. Would it be possible to retrofit the Institute's TR field generator to fit into the satellite (specs attached)? A test in space might help to see if there is any possibility of creating a temporal drive for future ANSA ships. We feel this is very important for the future of the program. If any future mission encounter a Hasslein Curve, as the ANSA I did, such a drive might give them a way to get home.

Finally, please give my person respects to Dr. Farrell. I hear that he has done very well with his therapy and will be returning soon. I can't tell you how happy we all are to hear of his recovery. He has been sorely missed.

Sincerely,

Walter H. Morton

THE JOINT COMMITTEE ON INTELLIGENCE

INTERNAL MEMORANDUM

March 9th, 1978

To: Members of the Joint Subcommittee on Intelligence, Science

From: Majority Committee Staff

Re: NASA request for additional funding for the Hasslein Institute

I. Summary

On Tuesday, March 7th, 1978, at 1:00 p.m., the House and Senate Joint Subcommittee on Intelligence, Science held a closed hearing.

The meeting was chaired by Senator Hazeltine and Representative Breck. In attendance were Senators Wilkens, Smith and Lee; and Representatives Sanford, Albertson and McConnell. Senator Moorehouse and Rep. Cheney were unable to attend. Also in attendance were Walter Morton of NASA, Lieutenant Malcolm Jones of the Navy and George Kaplan of the CIA.

The purpose of the meeting was to discuss and vote on NASA's request for increased funding for the Hasslein Institute of Temporal Physics. Mr. Morton testified that HITP had made great strides in their research of Temporal Radiation. However, their current efforts were hitting a wall. Thus, additional funding is needed to continue the research. The extra funds would be used to prepare a payload for a military satellite scheduled to launch in October and for the installation of a small nuclear reactor on-site at the Institute. The reactor is critical for future research due to the vast amount of energy needed to generate a stable radiation field. Both efforts will help a great deal in the creation of a Temporal drive for future ANSA ships.

Lt. Jones supported Mr. Morton's recommendation. He stated that in the absence of Dr. Farrell, the scientists at the Institute had become far more cooperative with NASA. He also said that the additional funds would help finish the underground sections of the Institute complex ahead of schedule.

Mr. Kaplan also supported the recommendation of additional funds. He stated that the CIA's asset, code named Caligari, has been fully cooperative since the arrest of the truck drive who hit Dr. Farrell's car. Caligari is now willing to direct the Institute's work in whatever direction that NASA wishes.

II. Determination

The Subcommittee voted 6 to 2 to approve the additional funding for the Hasslein Institute.

HASSLEIN INSTITUTE OF TEMPORAL PHYSICS

WINDSOR, NEW JERSEY

INTERNAL MEMO

Date: March 20th, 1978

To: ALL STAFF

From: Daniel Buckley, Sc.D.

Re: Dr. Farrell's Return and Other News

I am pleased to announce that Dr. Joseph Farrell will be returning to the Institute full time in two weeks. His recovery has been remarkable although he will be confined to a wheelchair for the rest of his life.

When Dr. Farrell returns he will be accompanied by Stacey Decker, who will act as his Assistant. Miss Decker is a remarkable young woman. She has been Dr. Farrell's full time nurse and physical therapist for the last several months. I credit her for Dr. Farrell's rapid recovery. Aside from being a nurse, Miss Decker studied Physics at Columbia. She is the perfect person to be Dr. Farrell's new Assistant.

Apart from resuming his administrative duties, Dr. Farrell will head up the Temporal Radiation satellite project. We have only four months to prepare a package for the satellite being launched in October. This is a very small window but I'm sure we can make the deadline. In addition to Dr. Farrell the team assigned to this project are Dr. McQueen, Dr. Moore, Prof. Rockford and Dr. Cox. All of whom have done excellent work in our tests recreating and studying temporal radiation. This satellite test will be the next phase in that research.

Thanks to additional funding granted to us by Congress, the Institute's third building will begin construction ahead of schedule. We anticipate to break ground by September, a full year before the original plan. This new building will contain even larger labs than building 2 and a large manufacturing facility big enough to contain an ANSA space vehicle. We hope that once this facility is completed, NASA will release the ANSA 1 capsule to us for direct analysis.

Also, and this is really big news, the new building will contain a small nuclear reactor. This will allow us to greatly expand our research by generating the power needed for our experiments.

As a consequence of this expansion, we will be talking on more staff, another dozen or so recent Princeton graduates as lab techs, assistants, etc. Plus, Dr. Joanna Lee and Professor Robert Hagen will be joining the Institute in the next few weeks. We will be reviewing more applications going forward. If anyone knows someone who would be a good addition to our staff please inform me or Dr. Farrell right away.

Finally, our Congressman, Jason Breck will be paying a visit on April 12th. I've planned a full tour and a special luncheon for Rep. Breck and his staff. I want us to put our best foot forward for this tour. Department heads, please forward your suggestions/ recommendations by the end of the week.

The future of the Institute is looking brighter and brighter. Let's continue to move forward together. Thank you.

To All NASA Personnel

RE: ANSA Flight Schedule

With the successful return of the ANSA V ship and crew, the schedule for the next four ANSA missions has been determined.

ANSA V discovered a total of 12 planets in the Alpha Centauri system. However, only six planets were in the system's habitable zone. Analysis of the data from the ANSA V capsule shows that only four of those planets have any promise of supporting life. Thus, the next four missions will be dedicated to surveying these four planets in order of viability. Each of these missions will do an orbital survey only and not land on any of the planets. These modified spacecrafts will not have landing and re-launch capabilities.

Due to the one year round trip required for each flight it will be necessary to overlap missions, starting with the ANSA VII mission, with the next flight being launched while the previous flight is on it's return journey. This will be a very aggressive schedule with a launch every six to seven months over the next two years. It is as follows:

- ANSA VI - Launch Date: June 1978
  Crew: Vance Brand, William Hudson, Joseph Engle
  Destination: Alpha Centauri V
- ANSA VII - Launch Date: December 1978
  Crew: Richard Truly, Sally Ride, Jeffrey Allen
  Destination: Alpha Centauri III
- ANSA VIII - Launch Date: July 1979
  Crew: Jack Lousma, Henry Hartsfield Jr., Judith Franklin
  Destination: Alpha Centauri VI
- ANSA IX - Launch Date: February 1980
  Crew: Alan Virdon, Malcolm Jones, Peter Burke
  Destination: Alpha Centauri II

After the successful return of each survey mission, the data they collected will be analyzed to determine the order of the next series of missions which will land on one or more of these planets. We anticipate the first of those launches to begin sometime in 1981. Those ships will have full landing and re-launch capabilities similar to the ANSA I & II.

In the meantime, the launch of ANSA VI is in just over two months. The prime crew has been training for months and the craft is about roll out from the VAB at the Cape. I'm confident that everyone will do their jobs to make this another successful mission.

Sincerely,

Walter H. Morton

Re: Satellite Package Update

Daniel,

We are making good progress with the satellite package and it should be ready to be shipped to JPL by the end of next month. It's a tight deadline but we can make it. I can't take the credit for this. The team you put together has done a terrific job, especially Dr. Cox.

Not to belittle the efforts of any of the others on the team, who all have done great work; but if not for Dr. Cox we would never have been able to meet the deadline. It was Cox who theorized and engineered the miniaturization of the temporal radiation generator as well as the back-up power source.

Of course, the work done by this team during my convalescence is the reason why we are at this point now. I have reviewed their reports and they really did excellent work. Dr. Moore's analysis has really impressed me and I think we should consider him as a Co-Director should I need to take another leave of absence. I understand that his daughter, Alexandra, will be starting at Princeton in the fall. Maybe we can establish a small scholarship there for the children of Institute staff.

In regard to the research done on the Temporal Radiation, I can't believe that I was so skeptical in the past. I really think it might be possible to generate a sustained field that could allow us to travel in time. I might just be thinking wishfully at this point but if the satellite test is a success; we should start to refit an ANSA spaceship as has been requested by NASA. If all goes well this could be as an important breakthrough as the atomic bomb 30 years ago.

Of course, and please keep this between us, if all our tests and experiments go well I would like to try to construct a temporal portal here on earth. I also want to run tests to see if it is possible to reverse time in such a portal. We know this is possible since the ANSA I capsule was able to travel back in time after traveling into the future. This might just be a pipe dream on my part but it is something that we should consider if all goes well.

Finally, I wanted to thank you for your recommendation that the Institute's new building be named for my Cynthia. I still can't believe that it has only been a year since I lost her. But I guess time is relative. And thanks for the electric wheelchair. It makes life much easier for me and my assistant Miss Decker. I'd really like to give her a raise if possible. Let's discuss.

Your friend,

Joseph Farrell

RE: Project Gabriel

PERSONAL AND CONFIDENTIAL

Jason,

First, I want to wish you the best of luck in your Senate race this fall. It takes a lot of courage to walk away from a secure House seat to run statewide. Please let me know if there is anything I can do to help you. I do have many contacts in the private sector who can help with fundraising.

We have some problems with Senator Moorehouse and Reps. Sanford & Albertson regarding further funding of Project Gabriel. We've been successful in stonewalling them on a full briefing of the project for over a year now, but I don't think we will be able to do so for much longer. So far Senator Lee, Rep. Cheney, you and I are the only members of the Committee who know all the details of the project and I'm determined to keep it that way. My fear is that if Moorehouse learns the full details, he will do everything in his power to kill the project. It will become a personal crusade for him. Sanford and Albertson will join him as well.

The Air Force and the Joint Chiefs really want this project. They feel it will be the ultimate defense of the United States. I agree with them so we can't let Moorehouse and the others stand in the way.

The good news is that I believe that we can stall them until after the mid-terms in November. Unfortunately, Moorehouse is not up for re-election and Sanford & Albertson are in safe districts. However, that still gives us until the new Congress convenes in January to come up with a strategy to continue to stonewall them without jeopardizing funding for the project.

On another topic, I met with Walt Morton of NASA last week. He told me that all is well with the ANSA VI mission launched last June. They expect it to reach its destination sometime around Christmas. It reminds me of the Apollo 8 flight ten years ago. Walt is confident that the mission will be a success and they are on track to launch ANSA VII in early January.

Walt also informed me that the Hasslein Institute has delivered their satellite package on schedule. NASA will be launching it in October. If the tests are successful, Walt feels it might be possible to test a prototype of the Temporal drive they have theorized on either the ANSA VIII or IX missions.

Additionally, Walt says that there is now a new sense of cooperation coming from the Institute. Since returning from his accident, Dr. Farrell has had a complete change of attitude. He is no longer difficult or resistant to direction from NASA. He has become very enthusiastic about building the Temporal drive. This will make it easier to use the Institute to pursue our agenda in the future.

Again good luck with your Senate race. And if you win, or should I say when you win, I want you as my Vice Chair on the Committee.

HASSLEIN INSTITUTE OF TEMPORAL PHYSICS

SUMMARY REPORT

DATE: 11/21/78	**REPORT ID:** 4564DJTR-456HEE	**PROJECT:** Temporal Satellite Tests
PROJ. LEADER: Dr. Joseph Farrell	**PROJ. TEAM:** Dr. McQueen, Dr. Moore, Dr. Cox	
CLASSIFICATION: Top Secret	**LOCATION:** HITP Control Room	**DISTRIBUTION:** NASA: ANSA DCI

FINDINGS

Over fifty tests have been conducted by the satellite launched six weeks ago. Most tests were a success with only a 12 achieving a negative result.

After the launch, eight days were spent on diagnostics of the satellite to assure that no components were damaged during the launch. All components passed each test.

On day nine, the radiation generator was activated on the satellite for a total of 78 seconds. It successfully generated a temporal field at half power. The next 20 tests increased the both the duration and power level until the field was sustained for 30 hours at full power. This is over 50 times the duration of any field generated here on Earth.

The next group of tests attempted to manipulate the field by adjusting the temporal variance. It was in the 17th of these tests that a big breakthrough was made. At one quarter power, the variance was set at -3.07 megahertz. It was then that the satellite stopped responding. The uplink was completely lost. JPL was contacted and they reported that the satellite had also disappeared from their tracking. It was assumed the satellite either shut down or had disintegrated.

However, it reappeared 76 minutes & 28 seconds later in the exact same position. According to the telemetry received from the satellite when it reappeared the internal chronometer did not register the missing 76 minutes & 28 seconds. Even if the satellite went completely off line, the chronometer is powered separately and should measure the time correctly.

After a full analysis of the data, the variance was duplicated at a higher power level. This time the satellite disappeared for a total of 4.8 hours. Again the chronometer did not measure the missing time.

The next several tests increased the variance and power levels in each case the satellite disappeared from all tracking for spans of a few minutes to several hours. JPL trained a high powered telescope on the satellite during one of these tests and observed the satellite disappearing as if is just faded out of existence. It reappeared in the same manner a few minutes later.

After all the data was reviewed, the conclusion that the satellite successfully projected itself into the future cannot be denied. The variance and power level determined how far into the future was possible. Several tests were conducted to see if it was possible to project the satellite into the past. All of these attempts had a negative result.

The result of these test prove that the temporal drive that has been theorized is possible and can be incorporated into a future ANSA spaceship for testing.

The full detailed report is attached.

THE NEW YORK TIMES **NATION** TUESDAY, DECEMBER 19, 1978

Jason Breck Prepares For New Role in Senate

WASHINGTON - At this time of year most Congressmen's offices are at a lull with staffers preparing for the Christmas recess. Not so in the office of Jason Breck. His office is a fury of activity as the popular New Jersey Congressman prepares to move from the House to the Senate in a mere two weeks.

It was no surprise to political insiders when Breck easily won the election by a very comfortable margin last November. Even his critics will say that he is an astute and natural politician. His supporters will say that Breck has an air of destiny around him. Many believe that he will one day play a pivotal role in human history.

The rise of the three term Congressman has been impressive. Elected to his seat in Congress six years ago at the young age of 25, Breck quickly mastered the inner workings of capitol hill. While most freshman Congressmen were still trying to find their offices, Breck was forging alliances and friendships with powerbrokers in both houses and on both sides of the aisle.

By the end of his first term Breck had sponsored no less than five bills that ultimately were made law. A record for a freshman in the House. He was also appointed to some of the most influential committees in Congress, including Science and Intelligence.

In his second term he achieved his biggest accomplishment to date, the Hasslein Institute of Temporal Physics. It is a testament to Breck's political skills that he got Congress to fund the Institute, especially since it is located in his own district. So far the Institute has been an economic boom to the area and the entire state of New Jersey. A feat that Breck has used to his political advantage.

On election night, Senator-elect Breck (right), prepares to address supporters with his wife, Donna (center) & campaign manager.

While he did flirt with the idea of running for Senate two years ago, he was easily re-elected to his House seat. Unfortunately, his wife, Donna, was diagnosed with cervical cancer at that time, postponing his plans for a statewide run. But now with his wife in remission, there was nothing to stop Breck this time around.

Some say Breck's success is due to him having one of the best chief aides on the hill, Hari MacDonald. The two met in Law school and have been close ever since. Many say they make a perfect political team with Breck laying out the big picture and MacDonald taking care of all the small details.

Senator-elect Breck's personal life is something he also uses to his political advantage. Married to his high school sweetheart for over ten years, he has two small children, Matt and Karen. Donna Breck has been the perfect congressional wife, hosting many dinner parties for high-powered political insiders. The most recent in honor of rookie Astronaut and New Jersey native Peter Burke.

Of course, Breck has his detractors. Many of them say that he has a naked ambition and an authoritative streak. One even said that if given the chance Breck would rather be a dictator than have to worry about elections decided by the masses. However, such extreme views are not taken seriously.

His supporters and friends will sing his praises. One of his closest political allies is Senator Wendell Hazeltine of Georgia. The two serve on the Joint Intelligence committee together. Hazeltine states that Breck is one of the most dedicated public servants he has ever met and plans on retaining him on the Joint Committee in his new role of Senator. Hazeltine also predicts that, "One day Jason will be the President. Only the fall of civilization will prevent that".

InGen's Amazing Orangutan

He loves doing jigsaw puzzles and can finish them in record time. He knows over 100 words of sign language. He loves games and can beat most people at them. His name is Mandemus and he the star of a press conference held by InGen corporation this week.

InGen's President and founder John Hammond displayed the 31 year old orangutan to announce a new process of gene therapy pioneered by InGen. Hammond states that this therapy has great potential for humans to cure everything from the common cold to cancer and many other diseases.

Most tests of this new process have been conducted on the orangutan Mandemus. So far they have greatly increased his intelligence and lengthened his lifespan. As part of the demonstration of Hammond had Mandemus put together a 100 piece jigsaw puzzle in under five minutes. Hammond also challenged several of the reporters attending to beat the ape at checkers, but none could.

According to Hammond, the ape is as intelligent as a 6 year old child. And his abilities will only grow over time. They think he will soon be able to learn to read. Hammond claims that InGen's new process was able to introduce new superior DNA into the ape that greatly increased his intelligence. How this superior DNA was developed or where is came from was not specified.

Of course, there are already critics of InGen's claims. Dr. John Ballard of the University of Virginia states that the ape, Mandemus, was originally part of selective breeding study in which Dr. Ballard took part. According to Ballard, Mandemus was the third generation of that study in which the goal was to increase the intelligence of apes.

Ballard also claims that genetic experiments were conducted on Mandemus during that study and that most of the orangutan's abilities, including being able to use sign language since he was 10 years old, are due to those experiments. Dr. Ballard feels that InGen is trying to take credit for work done years ago by others.

When asked where and when this study took place, Ballard was evasive, only saying the government shut it down over five years ago and classified all the records.

InGen has gotten criticism from other sectors of the scientific community. Dr. Joseph Farrell of the Hasslein Institute of Temporal Physics in New Jersey issued an official statement denouncing InGen for playing god. His statement goes on to say, "we've seen the result of apes having superior intelligence; bloodthirsty, treacherous beings who ruthlessly murdered a great man, Otto Hasslein. John Hammond and InGen are endangering the future survival of the Human race for profit".

Dr. Farrell isn't the only one to have a concern on this front. Senators Robert Moorehouse and Jason Breck have called for Senate hearings to investigate InGen to see if it violated any laws with its experiments and if those experiments are in any way a danger to mankind.

Senator Wendell Hazeltine, Chairman of the Senate Science Committee, says that he doesn't believe InGen has broken any law and that hearings are unnecessary. However, it has been pointed out that InGen has been a major political contributor to Senator Hazeltine's last few campaigns.

Whatever action Congress takes, or doesn't take, won't end the debate in the scientific community. Whether they think what InGen has done is ultimately good or bad, most can't deny that the company is pioneering a new area of genetics and DNA research. The ape Mandemus is living proof that InGen's work will have a big influence in the years to come.

Dr. Daniel Buckley
Hasslein Institute of Temporal Physics
281 Matthew Williams Drive
Windsor, NJ 08520

RE: Temporal Drive Test Problem

Dr. Buckley,

As you know, it was determined several months ago that the ANSA IX mission scheduled to be launched in 11 months would be the earliest opportunity to test the prototype of the temporal drive that the Hasslein Institute has developed. The ANSA IX spacecraft will be shipped to the institute for installation of the drive within the next few weeks. However, we have encountered a problem that we hadn't anticipated; the co-operation of the flight crew.

Specifically, the mission commander, Alan Virdon, has refused to test the drive. He objects to the test on the grounds that is not one of the prime goals of the mission and that the test might endanger successful achievement of the prime goals. Fortunately, the mission's pilot, Malcolm Jones, is fully supportive of the test; but mission specialist Pete Burke agrees with Virdon.

Frankly, I believe that since the test is to see if the drive can propel the spacecraft six months forward in time that Virdon's objection is based on not wanting to be away from his family for an additional six months. While he can't cite personal considerations as part of his objection, he has made a good case based on mission goals.

Unfortunately, we will not be able to proceed without Virdon's co-operation. Jones has been trying to convince him but has had little success. I would like to propose that Virdon, Jones and Burke make a visit to the Hasslein Institute as soon as their flight training schedule allows. My hope is that a tour of your facility with some demonstrations of your experiments on the temporal radiation will persuade Virdon to agree to the test. If not the only alternative is to cancel it.

Let me know when is the best date in the next three months to schedule the tour. I would also suggest that no work be done on the ANSA IX spacecraft until Virdon agrees to the test. You should show him all the plans for modifying the ship. Hopefully, the work of the Hasslein Institute will impress him enough to convince him to co-operate.

Please give my best to your colleague Dr. Farrell.

Sincerely,

Walter H. Morton

RE: Committee Issues

PERSONAL AND CONFIDENTIAL

Jason,

There are several important issues that we need to address before the next meeting of the Joint Committee.

The most important is the funding of Project Gabriel. Senator Moorehouse is dedicated to blocking any further funding unless he is given a full briefing on the project. You've been successful in persuading Rep. Sanford to support the project despite his objections. If we can pull away Albertson, Moorehouse will be a man alone. Schedule a dinner or lunch with Albertson and feel him out. If anyone can swing his vote, it's you.

I spoke with Walt Morton at NASA yesterday. He says that astronauts Virdon and Burke still refuse to test the Hasslein Institute's temporal drive during their mission next year. They took a tour of the Institute a few weeks ago but it failed to change their minds.

The Committee has poured millions of taxpayer dollars into the Hasslein Institute for the sole purpose of developing this temporal drive. We can't afford to let these two test pilots derail our plans. Walt says that it is crucial for the drive to be tested during the ANSA IX mission. Pete Burke is a fellow New Jersey native. When you get a chance maybe you could fly down to Houston and talk some sense into him. If we can't persuade these two to cooperate, we'll have to look for alternate means.

I also want to urge you to postpone the hearing on InGen. I know this company for years. They have a facility in Georgia and have been major contributors to my campaigns. I really don't believe they would do anything illegal or dangerous. Senate hearings now would only upset their plans for expansion. In fact, when I last spoke with John Hammond, he said that they were planning to open a major new facility in New Jersey. Any hint of controversy around the company would most likely disrupt that plan. Think it over. I'm sure you'll come to a wise decision.

Finally, I want to take you into my confidence and hope that I can rely on your discretion. In four months time I plan to announce my intention to run for the Presidency next year. I'm letting you know now to give you time to prepare. As my co-chair, you'll have to run the Committee while I've out on the campaign trail.

I really feel that I have a good shot of winning the nomination. My only real competition is from Senator Dole. The other announced candidates are a joke. A former CIA director and an ex-actor. This country would never elect men like them to be their President.

Please give my best to your wife. I heard that she has been feeling ill of late.

Covert Operation and Incident Report

REPORT ID:	CLASSIFICATION:	OFFICER REPORTING:	DATE:
RM-56916-JM9	Ultra Top Secret	Lt. Malcolm Jones	July 11th, 1979

SUMMARY	Report on the results of my attempts to persuade Alan Virdon and Peter Burke to agree to test the Hasslein Institute's temporal drive during our ANSA IX mission next year. To date, both Virdon and Burke refuse to agree to the test.
DETAIL	As a member of the ANSA IX crew, I have developed a close relationship with both Alan Virdon and Peter Burke. We train together on an almost daily basis and have become very friendly on a personal level. Over the past two months I have repeatedly discussed the test of the temporal drive. I have spoken to both together and individually. After many attempts on my part both men remain adamant on refusing to conduct the test. While Burke is far more flexible, he is backing Virdon who is completely against the test. He maintains that it is too risky and not a primary objective of the mission. Even after our tour of the Hasslein Institute last April, Virdon is unconvinced. While he was very impressed with their facilities and research, as well as with Drs. Farrell and Buckley; he still feels the test of the drive to big a risk. At this point, I doubt there is anything I could say or do to change his mind on this matter. Due to Virdon’s refusal, the only alternative is to cancel the test. Personally, the creation of the temporal drive has been a professional goal for the last several years. Cancelling the test of it is a failure for me. Therefore, I would like to propose an alternative. During my duty with the Office of Navel Intelligence several years ago there was a research program conducted to deal with aviators, who after too many bombing missions over Viet Nam, were refusing to fly more missions. The program used a new form of deep hypnosis to block an aviator’s memory of their previous bombing missions; thus making them agreeable to flying additional missions. My proposal is to use this technique to block all knowledge of the temporal drive test from Virdon and Burke. It would also be necessary to implant a code word that I can use during the flight to put them in a deep sleep. At that time I could alone conduct the test on the drive. After the test, an additional code word would bring them out of the trance. I regret having to propose this. It is an extreme measure to use on my crewmates. However, I can’t see an alternative if the drive is to be tested during the ANSA IX mission.

THE JOINT COMMITTEE ON INTELLIGENCE

INTERNAL MEMORANDUM

July 19th, 1979

To: Members of the Joint Subcommittee on Intelligence, Science

From: Majority Committee Staff

Re: Project Gabriel funding and other issues

I. Summary

On Tuesday, July 17th, 1979, at 11:00 a.m., the House and Senate Joint Subcommittee on Intelligence, Science held a closed hearing.

The meeting was chaired by Senator Hazeltine and Representative Cheney. In attendance were Senators Breck, Moorehouse, Smith and Lee; and Representatives Sanford, Albertson, McConnell and Jackson. Also in attendance were Walter Morton of NASA and Astronaut Malcolm Jones.

The main item on the agenda was to discuss funding of Project Gabriel. Senator Moorehouse has placed a personal hold on any further funding until he and the whole committee receive a full briefing on the details of the project. Senator Smith and Reps. Albertson & Jackson supported Sen. Moorehouse's objection to continued funding of the project insisting on a full briefing from the Department of Defense before agreeing to any more funding for Project Gabriel.

The second item on the agenda was the upcoming hearings investigating InGen corporation. Senator Hazeltine said the hearings were unnecessary since there is no evidence illegality in InGen's genetic research. Sen. Moorehouse objected stating that the purpose of the hearing was to determine of InGen has violated the law.

The final item was the ANSA IX mission. Astronauts Burke and Virdon refuse to conduct a test of the Hasslein Institute's Temporal Drive during the mission. Mr. Morton and Lt. Jones proposed a hypnotic procedure, developed by the Office of Navel Intelligence, to be used on Burke and Virdon so the test could be conducted without their knowledge.

II. Determination

The Committee voted 6 to 4 to override Sen. Moorehouse's hold on further funding for Project Gabriel. A 2/3rds majority was needed so the override failed.

The Committee voted 8 to 2 to cancel the hearings on InGen.

The Committee voted 7 to 3 to approve Morton and Jones' proposal.

III. Attachments

A. Full transcript of the Subcommittee hearing.

TOP SECRET

Re: Procedure on Astronauts Alan Virdon and Peter Burke

Mr. Morton,

Last week under the authority of the Joint Committee on Intelligence and your office, we conducted a hypnotic procedure on astronauts Alan Virdon and Peter Burke. The propose of the procedure was to create mental blocks to erase all their memories of the special drive unit developed by the Hasslein Institute of Temporal Physics scheduled be tested during their mission next year.

I'm happy to report that the procedure was a complete success. A full report is attached for your review. To summarize, under the cover of conducting a routine physical examination, a Physician from ONI was able to put both men in a deep trance for several hours and was able to place all of the requested memory blocks in their minds.

However, both Virdon and Burke proved to be very strong willed and intelligent men. Neither would probably ever succumb to most brain washing techniques. Thus, it was required to block more than just their memories of the test and the drive. Additional mental blocks needed to be put in place to ensure success of the procedure. All knowledge of the Hasslein Institute and the late Dr. Otto Hasslein had to be blocked. Consequently, all memories of the ANSA I and II flights and the Ape-o-nauts had to be blocked as well.

Additionally, three codes words were embedded for post hypnotic suggestion. The first will put them in a trance. This can be used by Astronaut Jones in-flight when he wishes to test the drive unit. The second will bring them out of the trance after the test is completed. The third is to be used after the flight and will lift all of the memory blocks placed in their minds during this procedure. As an added safeguard, this final code word will only be effective after they have completed their mission and returned safely to the Earth. All three code words have been classified and will communicated to you by special courier.

Finally, the Doctor who preformed the procedure suggests that none of the subjects, people or events that were blocked (i.e. the Hasslein Institute, ANSA I, Cornelius & Zira, etc.) be mentioned in their presence. While the mention of George Taylor's name would not be enough to break through the memory blocks, it could cause the men mental anxiety. I understand that for the final phase of their training the astronauts are pretty isolated, even from their family and friends. Thus, it shouldn't be a problem to instruct anyone who will have contact with them to avoid those subjects. However, we recommend an additional hypnosis session a few days prior to the launch for reinforcement.

Please let me know if you have any questions or comments.

Sincerely,

Arthur Kolp

Lt. Commander Arthur Kolp

cc: Ranking members - Joint Committee on Intelligence

HASSLEIN INSTITUTE OF TEMPORAL PHYSICS

WINDSOR, NEW JERSEY

PERSONAL AND CONFIDENTIAL

Date: October 30th, 1979

To: Daniel Buckley, Sc.D.

From: Joseph Farrell, Ph. D.

Re: Temporal Drive and Other Matters

Daniel,

Greetings from Florida!

I'm happy to tell you that the temporal drive unit has been successfully installed on the ANSA IX spacecraft. Dr. Moore, Dr. McKay and myself, with the help of a small select team of NASA engineers, worked round the clock here for the last three weeks to get the unit incorporated with the other systems on the ship. It is now ready to be hoisted on top of the massive boosters in the vehicle assembly building in preparation for the February launch.

We were a small but dedicated team. It would have been nice to have more NASA personal available but due to the top secret nature of the project we had to keep it a small group.

I had several meetings with Walt Morton while down here. He told me that Lt. Jones will be conducting the test of the drive alone. Virdon and Burke will not be involved but no longer object. In fact, none of our team were allowed to see either man while down here. They seem to be sequestered at the moment.

Lt. Jones has requested some additional training sessions on the drive. Walt asked if we can set them up over the next two months. He wants them conducted at the Institute rather than here or in Houston. I don't see a problem with that. We can work out a schedule as soon as I return next week.

Additionally, while Jones is at the Institute it might be a good idea to work out some new safety protocols. Since he will be conducting the test without the assistance of the other two astronauts some new protocols will be necessary to ensure the success of the test.

I also want to let you know that my assistant, Stacey Decker, will be resigning upon our return to the Institute next week. I feel that it is best that she no longer work for me because it would be a major conflict of interest. The reason being Stacey and I are engaged. Neither of us expected this to happen but we fell in love over the last few months. I never thought I would get over the death of Cynthia but Stacey has helped me move on. We hope to be married next June. Of course, I would like you to be my best man.

That's it for now. See you next week.

Your friend,

Joseph Farrell

INTERNATIONAL GENETIC TECHNOLOGIES
INTERNAL MEMORANDUM

DATE: December 12, 1979

TO: John Hammond, President

FROM: David Bray, Vice President, Security Division

RE: Mandemus Project Update

BACKGROUND

After World War II your then company, Heredity Sciences, building on research done by Germany during the war, began a selective breeding experiment on apes under a contract with the United States Department of Defense. Due to public sensitivity to continuing research conducted by the Nazis, the project was kept Ultra Top Secret. As part of that project the orangutan named Mandemus born in 1948.

While Mandemus was the most advanced ape subject of that experiment, he never exhibited the level of intelligence hoped for by the scientists at that time. Consequently, the U.S. government suspended the experiment in 1950. Mandemus was retained by Heredity Sciences for study in its Denver facility.

In 1973, the corpse of the evolved chimpanzee Milo was sent to the Denver facility for autopsy and study. Hair, tissue and other genetic samples were taken for examination. After the death of the other two evolved chimpanzees, Cornelius and Zira, and their baby, all four bodies were ordered to be cremated by the United States government. The body of Milo was handed over by Hereditary Sciences for cremation. However, all the genetic samples were shipped to a subsidiary company in South America where they were housed in a high security vault. Shortly thereafter, the U.S. government canceled all funding for Hereditary Sciences resulting in the company ceasing operation. The orangutan Mandemus was sold to a zoo in San Diego.

In 1976, when you founded InGen, Mandemus was reacquired by the company and sent to our facility in Georgia. The Milo genetic samples were also sent to this facility. The scientists there experimented on the orangutan using the Milo samples and greatly increased the ape's intelligence. Since the presentation of Mandemus to the public last January, there has been an outcry of protest from both the government and the scientific community. It was then that this department took action to blunt those protests.

RESULTS

We have been successful in preventing any and all Congressional hearings on the Mandamus project. Senator Hazeltine has been a key ally on this front. The Senator has announced his candidacy for President and InGen has made several large donations, through several subsidiaries, to his campaign. InGen has also made donations to Senator Jason Breck. He was one of our loudest critics in the Senate; but these donations and a promise to locate our new facility in his home state of New Jersey has silenced him.

Our chief critic in the scientific community has been Dr. Joseph Farrell of the Hasslein Institute of Temporal Physics. To deal with Dr. Farrell, we've employed a two pronged approach. Senator Breck holds the purse strings for the Hasslein Institute. The Senator has agreed to quietly put pressure on the Institute's Director, Dr. Daniel Buckley, to keep Farrell quiet. We have also begun a whisper campaign noting that Dr. Farrell is not a genetic scientist and has no credibility in the field. So far these efforts have been successful. Also, we have also learned that Dr. Farrell has recently become engaged, so he'll be otherwise occupied.

InGen should now be free to move forward with the next stage to expand the experiments on Mandemus and other apes.

Please let me know if you have and questions or comments.

RE: ANSA IX Mission

Dr. Buckley,

I wanted to congratulate you and your team for the fine work done on the ANSA IX spacecraft prior to its launch last month. Walt Morton at NASA reports that all systems are go and it is expected to reach the Alpha Centauri system on August 19th.

Before the launch I spoke with Malcolm Jones. He had nothing but high praise for his training at the Hasslein Institute. He is 100% confident that all of the ANSA IX's mission goals will be achieved. On behalf of the Joint Committee thank you and your colleagues for their efforts.

Also, please be sure to congratulate Dr. Farrell for me. I understand that he has recently become engaged. After the tragedy he endured three years ago, he certainly deserves to find some measure of happiness.

As I'm sure you have read in the news, Senator Hazeltine has declared his candidacy for President and has taken leave from the Senate to focus on his campaign. I will be filling for him as the Senate Co-Chair of the Joint Committee. The Institute won't have a better advocate on the Joint Committee than me. I have already secured funding for the next two years including an flight test during the ANSA XII mission after the successful return of the ANSA IX.

However, there is an issue that we need to discuss. Dr. Farrell has been a very vocal critic of the genetic experiments being conducted by InGen Corporation. The Joint Committee has reviewed these experiments, consulting with several experts in the field of genetic science, and have concluded that there is no violation of current law and no danger to the public. Additionally, InGen is planning on constructing an new research facility just outside of Newark starting next year. This will be a huge economic boom for our state.

If it were possible, could you intervene and encourage Dr. Farrell to temper his criticisms. Doing so will ensure that the Institute maintains its good relations with the Joint Committee and won't hamper any additional funding requests. Perhaps the three of us can get together for lunch next month during the Senate recess to discuss further. I'll have my aide, Harry MacDonald, call your office to set it up.

Looking forward to seeing you then. I'm sure we can all come to a sensible arrangement on this affair.

My regards to your wife and family.

Sincerely Yours,

Jason Breck

JASON BRECK

Covert Operation and Incident Report

REPORT ID:	CLASSIFICATION:	OFFICER REPORTING:	DATE:
JL-88107-NQ5	Ultra Top Secret	George Kaplan	April 11th, 1980

SUMMARY	Debriefing session with Caligari, agency asset embedded in the Hasslein Institute of Temporal Physics. Session took place on April 7th, 1980 at an agency safe house in Washington, D.C.
DETAIL	Caligari reported that the underground facilities have been completed at of this meeting. All labs are full operational as is the communication center which will feed all data from the Institute to Langley on a covert basis. Additionally, all the living quarters are available for occupancy so we can start to move our operatives into the facility at any time. There is enough space for over 200 people available. However, only 35 operatives are deemed needed at this time. Also, the underground facility has been fortified to act as a fall-out shelter in case of nuclear attack. And can be used as a command center if need be. It will be placed on the short list of Presidential bunkers. According to Caligari, construction on the emergency underground rail link can begin as soon as funding can be secured. This link will be vital if the facility is ever used by the President in time of war. The asset assured me the underground facility has remained a secret from the regular Institute staff. Only fellow selected assets, whom have been hired by the Institute over the last few years, are aware of it's existence. Most of the Institute staff is focused on analysis of the ANSA IX test that will occur in August. (That data will be fed to Langley in real time via the underground communications center.) The rest of the staff are busy retro-fitting their temporal drive unit on the ANSA XII craft. Caligari reports that they are having some problems with this since the spacecraft is designed to land on a planet, unlike the ANSA IX which is only designed for spaceflight. The asset is confident that all problems will be solved and the ANSA XII will be ready on schedule. The next debrief with Caligari is scheduled for September 13th, after the first phase of the ANSA IX test is completed, here in Washington. Caligari's report and a full transcript of this session is attached.

WENDELL P. HAZELTINE
GEORGIA

CHAIRMAN
INTELLIGENCE COMMITTEE
SCIENCE COMMITTEE

United States Senate

WASHINGTON, D.C. 20510

DATE: June 19th, 1980

TO: Senator Jason Breck

RE: Thank You!

PERSONAL AND CONFIDENTIAL

Jason,

I wanted to thank you again for your support in the primaries. I am of course disappointed in not winning the party's nomination for the presidency, but we gave it a good try.

I know it was hard for you to continue to support me after I lost both Iowa and New Hampshire; so I really appreciate all the campaigning that you did for me in your home state. As the saying goes, 'there is no cause like a lost cause'.

Now that my campaign is over, I will be returning to the Senate full time after the convention. Just to let you know that while my name has been floated as a possible VP on the ticket; I really don't expect that to happen.

I also want to thank you for the terrific job you've been doing filling in for me as Senate Co-Chairman of the Joint Committee. Good work in getting those scientists to shut up about InGen. Also, Walt Morton over at NASA has said that the ANSA IX mission is going as planned and he expects the test of the temporal drive to be a complete success. He said that the Hasslein Institute has even started retro-fitting the next version of the drive on the ANSA XII vehicle. You should be proud of the work you've done in my absence and over the last few years.

Going forward, we should start to work on reactivating Project Gabriel. If we win the election in November, we'll have a President who will be open to the project. That should be all we'll need to override Senator Moorehouse's hold on funding the project.

I hope that you will be coming to the convention in Detroit next month. I and several of the leaders of the party want to discuss your future. We all feel that it is very bright. As I learned, it is very hard for a Senator to run for President these days. The country has not elected a sitting Senator since Kennedy 20 years ago. Most of the recent Presidents have been Governors. Thus, we would like you to consider leaving the Senate to run for Governor of New Jersey next year. It is felt that two or three terms as Governor will give you the right pedigree for a future Presidential run. And I can guarantee financial support for your campaign from top donors like InGen.

This is not a decision that I expect you to take lightly or quickly. But please consider it. We can discuss it further at the convention next month. And be sure to bring your wife. She will be part of this too. I understand that she has fully recovered from her cancer scare last year. Let's hope she never has a reoccurrence. She is a lovely lady and a great asset for your political career. Please give her my most heartfelt regards.

See you in Detroit next month.

The Washington Post

SATURDAY, SEPTEMBER 13, 1980

ALL CONTACT LOST WITH ANSA IX

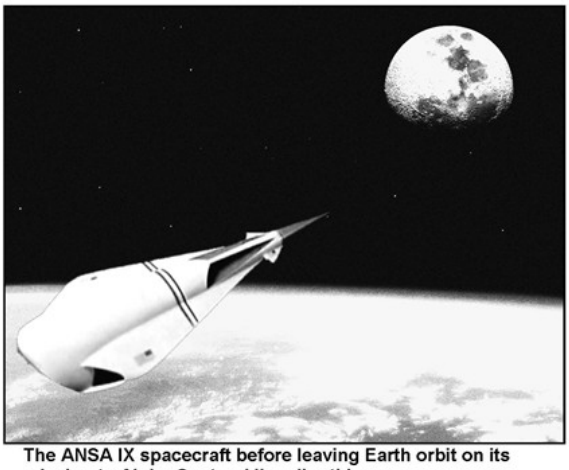
Several sources inside NASA have confirmed that there has been no communication with the ANSA IX spacecraft since August 19th, over three weeks ago. The Astronauts reported that they were encountering some form of radioactive turbulence as their craft was approaching Alpha Centauri.

ANSA program chief Walter Morton issued an official statement saying, "It is not unusual for temporary communication blackouts during ANSA flights considering the vast distances involved. Several of the previous missions have experienced similar blackouts". However, in those previous cases, communication was re-established within 24-48 hours. Thus, the length of this blackout is unusually long which has many NASA officials highly concerned.

The crew of the ANSA IX consists of Mission Commander Alan J. Virdon, Mission Pilot Malcolm "Jonesy" Jones and Mission Specialist Peter J. Burke. Virdon, a Texas native, is a Colonel in the Air Force. He lives in Houston with his wife and son. Jones was born in Hawaii on the naval base at Pearl Harbor, his father being one of the most decorated aviators during World War II. He is a Lieutenant in the Navy and lives in Virgina with his wife and daughter. Burke, born and raised in New Jersey, holds the rank of Major in the Air Force. He is unmarried and has two sisters living his home state.

ANSA IX was to be the last of the survey missions to the Alpha Centauri system. They were to orbit and study Alpha Centauri II to see if was able to support life. The three previous missions conducted similar studies of planets III, IV and V in the system. Data from those surveys are still being analyzed but so far it seems that only Alpha Centauri IV is marginally habitable.

The next mission, ANSA X, was to land on the planet with the best conditions for Human life. After the disappointing results of the previous missions, it was hoped Alpha Centauri II would be more conducive to supporting life. ANSA X was scheduled to launch in early 1982 but the future of that mission is unclear unless communication ANSA IX can be re-established.



The ANSA IX spacecraft before leaving Earth orbit on its mission to Alpha Centauri II earlier this year.

The scientific community has begun to weigh in on the situation. Jesco von Puttkamer of the Jet Propulsion Laboratory in Pasadena, California stated, "This could be the worst disaster for NASA since the loss of the first two ANSA missions. It will be a death blow for the ANSA program". Dr. Daniel Buckley of the Hasslein Institute of Temporal Physics had a more optimistic view. He said, "I have no doubt that the ANSA IX will return to Earth safe and sound in the future. This is just a temporary communication loss". He also speculated that the radioactive turbulence that the ship reported may have knocked out their long range communications system and that contact will be re-established when on its return journey when it is close enough to Earth.

With a presidential election only 7 weeks away the political ramifications can be enormous. In 1972 Matthew Williams was able to unseat an incumbent president due to his perceived inaction over the loss of the ANSA I and ANSA II spacecrafts. So far, neither major party candidate has commented on the issue. However, independent candidate Rep. John Anderson has called for an immediate investigation of NASA and the ANSA program and for the immediate launch of a rescue mission to search for the ANSA IX spacecraft.

NASA officials have refused to comment on the Congressman's demands.

Houston, Texas 77586

RE: ANSA IX Flight

Walt,

It is fairly clear by now that something went wrong with the ANSA IX. The craft has been out of communication far too long to reach any other conclusion. However, whether it had anything to do with the temporal drive and the planned test still remains to be seen.

According to the data the you've sent, satellites left in the Alpha-Centauri system by previous mission have recorded no trace of the ANSA IX craft. Thus, it is most likely not in the system. This leads to three possible scenarios:

1. The ship never reached the Alpha-Centauri system. The radioactive turbulence reported either destroyed or disabled the ship. The best case scenario is that the ship was just damaged and is returning to earth per mission protocols.

2. The ship was damaged by the radioactive turbulence, knocking out all communication, forcing it to crash on one of the planets in the Alpha-Centauri system.

3. Somehow the radioactive turbulence activated the temporal drive and the ship traveled into the future. However, due to the numerous safeguards we placed on the device, we consider that very unlikely.

After consulting with many of my colleagues here at the Institute, the consensus seems to be wait and see. If the temporal drive did somehow become activated, the ANSA IX should re-appear at some point in the future. How long is anyone's guess but it should be at most a few months, maybe a year but not longer than that.

I understand that there is significant political pressure building for NASA to launch a rescue mission. Governor Reagan has made it a centerpiece of his Presidential campaign. And while I understand that the loss of this ship deals a blow to the whole ANSA program; I urge you not to do anything out of panic or political expediency. Any rash actions may endanger all our goals in developing the temporal drive.

Let's have lunch to discuss further next time I'm in Florida or when were both in D.C.

Sincerely,

Daniel Buckley

United States Senate
WASHINGTON, D.C. 20510

November 6th, 1980

President-Elect Ronald Reagan
Rancho del Cielo
Santa Barbara, CA 93101

RE: Congratulations

Mr. President-Elect,

I want to offer my congratulations on your decisive election win on Tuesday. Despite our differences during the primaries earlier this year, I'm sure we can forge a great partnership during the next four, hopefully eight, years. There is a lot that needs fixing in this country and we now have a great leader to follow.

There are three issues that I wanted to bring to your attention in regard to by role as Co-Chairman of the Joint Committee on Intelligence. My hope is to get them on to your radar and gain your support. These are ultra top secret matters that I couldn't discuss with you before.

The first is the missing ANSA IX mission and the Hasslein Institute of Temporal Physics. A full briefing paper on the Temporal drive experiment is attached. My concern is the loss of the ANSA IX will kill funding to both the ANSA program and the Hasslein Institute. This cannot happen.

The Ape-o-nauts testified that they witnessed in the total destruction of the Earth from orbit in the year 3955. It has been the secret agenda of the Joint Committee, in cooperation with the CIA and certain NASA officials, to stop this from happening. We hope that the Temporal drive can be developed to send a mission to the year 3955 and prevent whatever events caused the destruction of Earth. I hope we can count on your support in continued funding of the ANSA program and the Institute.

The second is a Defense department program code named: Project Gabriel. This program is vital to the future defense of our country. Due to the ultra Top Secret nature of this program I can't go into details about it in this letter, but the files are available to you through the DOD to review. I'm sure that you'll agree that this program should be a top priority. Unfortunately, the funding on the project been stalled by Senator Moorehouse and his allies in the House and Senate. Hopefully, with your support the Project Gabriel can get back on track.

Finally, InGen Corporation is doing great work in the field of genetic research. However, there are several onerous federal regulations that are getting in the way of their research. We need your help in deregulating this industry. We can discuss further after your inauguration in January.

Sincerely,

Wendell P Hazeltine

Senator Wendell P. Hazeltine

THE JOINT COMMITTEE ON INTELLIGENCE

INTERNAL MEMORANDUM

January 29th, 1981

To: Members of the Joint Subcommittee on Intelligence, Science

From: Majority Committee Staff

Re: ANSA IX and other issues

I. Summary

On Wednesday, January 28th, at 9:30 a.m., the House and Senate Joint Subcommittee on Intelligence, Science held a closed hearing.

The meeting was chaired by Senator Hazeltine and Representative Sanford. In attendance were Senators Breck, Moorehouse, Baker and Lee; and Representatives Wilson, Albertson, McConnell and Williams. Also in attendance was Dr. Daniel Buckley of the Hasslein Institute.

The first item on the agenda was the missing ANSA IX spacecraft. Dr. Buckley testified that the Temporal Drive unit was most likely not the cause of the craft's disappearance. He also stated that while he initially opposed a rescue mission, he now supports such a mission to determine what happened to the ANSA IX. Senator Breck noted that the President supports a rescue mission.

The second item was the continued funding of the Hasslein Institute. Because ANSA missions are now on hold, Senator Moorehouse has objected to any further funding. Dr. Buckley testified that funding the Institute is more important than ever to determine what went wrong with ANSA IX. Senator Breck noted that there are other projects the Institute is developing, other projects that are important to the committee's ultimate goals.

The final item was funding for Project Gabriel. Since the hold from the last Congress has now expired, Senator Hazeltine asked to restore funding for the project. Senator Baker and Rep. Williams spoke out against further funding, noting that the President does not support the project and wishes those funds be directed to his Strategic Defense Initiative.

II. Determination

The Committee voted 8 to 2 to support an ANSA IX rescue mission.

The Committee voted 6 to 4 to continue funding for the Hasslein Institute.

The Committee voted 7 to 3 against restoring funding for Project Gabriel.

INGEN OPENS RESEARCH FACILITY IN HOBOKEN

Senator Breck and Senator Hazeltine talking before the dedication ceremony.

HOBOKEN, NJ–International Genetic Technologies opened their brand new research laboratory here today with an elaborate dedication ceremony hosted by hometown icon Frank Sinatra. More like a political rally, speakers included the Vice President, the Governor, Senator Wendell Hazeltine (R-GA) and New Jersey's own Senator Jason Breck in addition to InGen CEO John Hammond.

This facility is the largest InGen has opened in the U.S. to date. Located on the southwest edge of town, the lab will have easy access to both the highway, railroad, public transportation and the port. There even is room for growth if InGen decides to expand sometime in the future.

Unfortunately, there is still some controversy surrounding the new lab. Protestors from several animal rights groups picketed the dedication ceremony Bruce Springsteen was hired to perform, but canceled at the last minute citing the concerns of several scientists regarding genetic experiments on the orangutan Mandemus, who will be housed at this facility. However, Dr. Joseph Buckley of the Hasslein Institute spoke in defense of InGen's research. He said that research is the only way for scientists to gather knowledge and that most major breakthroughs were the result of research that was controversial at the time. It should be noted that the Hasslein Institute is funded by the Senate committee co-chaired by Senators Breck and Hazeltine.

As with the Hasslein Institute, Breck was instrumental in securing the funding to bring this facility to his home state. The Senator pointed out in his speech that InGen will generate hundreds of new jobs which will boost the local economy.

It had been rumored that Breck was planning a run for Governor. However, he quashed those rumors on Face the Nation last week, declaring he was not a candidate and pledging to serve out his current term in the Senate.

From: Daniel Buckley, Sc.D.

Re: ANSA IX Rescue Mission

I just got notification from NASA that they will be launching a rescue mission for the ANSA IX spacecraft in November. The President is going to announce it to the press tomorrow. He has been pushing NASA to do this since he took office in January and enough Senators and Congressmen support it to gain funding.

The rescue mission, designated at ANSA X, will use the Lander version of the craft similar to the ANSA I & II vehicles. While there are no plans for them to land on any of the planets in the Centauri system, it is only craft available for the November launch window. It will take the ANSA X six months to reach Alpha-Centauri and then will conduct search of the system for five weeks before heading back to Earth. If the ANSA IX is located, they will conduct the appropriate operation depending on the status of the craft.

Of course, we have been ordered to halt retro-fitting the ANSA XII with the temporal drive, although it is 95% complete at this point. All further tests on the drive are suspended until it can be determined what happened to the ANSA IX. Unfortunately, our whole program is now in danger as is the whole ANSA project. The politicians in Washington are scared to death that our drive caused whatever happened to ANSA IX and that that there will be a terrible backlash if the public or press ever finds out.

Unfortunately, without the drive project Congress is likely to cut off our funding. While the drive is only a part of our research, it is what pays for everything else. Therefore, I would like to propose something that Dr. Cox and I discussed a while back.

The temporal drive creates a radiation field around a spacecraft allowing it to travel forward in time without all the problems related to time dilatation. As you know, we had hoped that the tests with the ANSA IX and XII would provide enough data to develop two way travel, but that seems unlikely now. However, Dr. Cox feels that it might be possible to generate the field in our labs, creating a portal so to speak, without the need for a spacecraft. Let me know your thoughts.

On another note, Dr. Moore's daughter Alexandra is heading into her senior year at Princeton in the fall. She would like to intern here and possibly do her graduate studies here as well. I hear that she is a brilliant young woman and want to grant her request. I hope you agree.

Finally, some personal news. Donna is pregnant again. It's great that our little David will have a brother or sister. And a playmate for your child too. I understand that your wife Stacey is due in just a couple of weeks. We should all get together and celebrate before she gives birth, you won't have the time afterwards.

INTERNATIONAL GENETIC TECHNOLOGIES
INTERNAL MEMORANDUM

DATE: December 17, 1981

TO: John Hammond, President

FROM: John Kyle, SVP, Director Research & Development

RE: Facility Status and Proposal

YEAR END STATUS REPORT

As of last August, the Hoboken, New Jersey facility was 100% operational. It is completely staffed and all laboratories are functioning and in use. Over 50 apes (20 gorillas, 20 chimpanzees, 10 orangutans) have been shipped to and are housed in the facility. This includes the test subject named Mandemus.

Despite initial protests from various activist groups, the situation has settled down and the local community has accepted InGen's presence. However, several local officials in the state legislature have proposed new regulations that may hinder our research. Senator Breck has been contacted and is applying pressure to ensure none of these proposals will be enacted.

Tests and studies on the orangutan Mandemus are proceeding on schedule. Similar genetic procedures have been conducted on several other apes of all three species. The results have been mixed with the chimpanzees and orangutans showing the biggest increases in intelligence. While gorilla subjects have also shown increases, they are much smaller than those in the other two species.

One side effect of these procedures is that all three species have shown a decrease in physical strength in all test subjects. The average ape has anywhere from 3 to 6 times the physical strength of the average adult human males, depending on the species. However, test subjects of all three species have tested in the 1 1/2 to 3 times range, including all gorillas.

The increase in intelligence and decrease in physical strength in the test subjects lead to a unique opportunity for the company. Please consider the following proposal.

PROPOSAL

While not the original goal of our research, the results mentioned above offer the company the opportunity to enter the domesticated pet market. In the United States this market totals over $200 Million annually. Worldwide the market is worth 2 to 3 times as much.

If out present line of research continues in the direction that it has already taken, it may be possible develop domesticated apes of all three species that can be marketed as household pets. In the past, the great strength of simians has been a hindrance to entrance in to the pet market. In many cases, those who have kept an ape as a pet ended in a tragic circumstance where the owner injured and the apes killed. However, if InGen can offer a line of "safe" apes that are less strong and more intelligent; we should be able to successfully exploit that profitable market.

Currently, the domesticated pet market is dominated by dogs and cats. A successful marketing campaign would need to point out that the increased intelligence of apes, will make them more fulfilling pets. For example, while an owner can play fetch with a dog, they can play catch with an ape. Of course, any idea to make dogs and cats less desirable pets or even less available to the average household would be to the company's advantage.

Please let me know if you have and questions or comments.

July 29, 1982

Senator Wendell P. Hazeltine
Senate Office Building - Suite 364
Washington, D.C. 20510

RE: ANSA X Mission Report

Senator Hazeltine,

I wanted to give you a heads up before NASA releases the official report to the public. The President has already been briefed on this and has approved your being informed now. Unfortunately, the ANSA X found no trace of the ANSA IX spacecraft in or around the Alpha-Centauri system. There was no wreckage or even a distress signal. Our scientists and technicians have been pouring over the data for weeks and can find nothing apart from a faint radiation signature which may or may not be from the ship. The ANSA IX has completely disappeared and we have no explanation for it.

We also have another problem. Mission Commander Jacson broke with protocol and landed the ANSA X on Alpha Centauri II. He took this action on his personal authority based on readings that indicated there might be life signs on the planet. He believed it could be Virdon, Jones and/or Burke who might have survived a crash landing. No trace of them or the ship were found on the planet.

Since the ANSA IX disappeared before it conducted its survey, the planet is a complete unknown. The ANSA X craft is not equipped to conduct such a survey. Thus, it may be possible that the astronauts are carrying back some unknown viral infection to Earth. It is even possible that they may not even survive the trip back. This information is will not be in the official report when it is released. We don't want to start a general panic.

I have spoken to Dr. Stone of Project Wildfire and their lab in Nevada is undergoing an extensive renovation so it won't be available when the ANSA X returns in December. We have reviewed several other laboratories and the two best candidates to isolate the ANSA X crew for the required 3 months are the Hasslein Institute in New Jersey and InGen's facility in your home state of Georgia. We would need to the committee's approval to chose either or these facilities and hope we can count on your help in pushing through the funding for this quickly.

On another note, this period of isolation may work to our advantage. Jackson and his crew face court-martial for disobeying orders by landing on Alpha-Centauri II. We can use this time away from the press and public to convince them to avoid court-martial by supporting the following: altering the official report to state that the wreckage of the ANSA IX was found on the planet. This will avoid any distrust of the ANSA program by the public caused by the ship's unexplained disappearance. The mission's failure be assigned to a simple human error by one of the astronauts. I hope you support this scenario.

Sincerely,

Walter H. Morton

Walter H. Morton

cc: Director National Aeronautics and Space Administration

ANSA IX Found Crashed on Alpha-Centauri II

HOUSTON - The National Aeronautics and Space Administration released the official report on the fate of the missing ANSA IX spacecraft. Based on the exploration by the ANSA X rescue mission, the ANSA IX crashed on Alpha-Centauri II just shortly after it began its survey of the planet. All three ANSA IX astronauts, Alan Virdon, Malcolm Jones and Peter Burke, were killed in the crash.

NASA's report states that ANSA X Commander Jackson ordered a landing on Alpha-Centauri II when wreckage of ANSA IX was detected on the planet's surface. The report commends Hudson and his crew for "taking courageous action in hopes of rescuing their fellow astronauts". Senator Wendell P. Hazeltine of Georgia also hailed the crew of ANSA X, calling them "true American heroes". Walter Morton, Director of the ANSA program, echoed this sentiment and noted that they have become the first men to set foot on an alien planet, "destined to be remembered with some of the greatest explorers like Marco Polo, Columbus and Neil Armstrong".

The President has ordered all flags on Federal buildings at half staff for the next month in remembrance of Virdon, Jones and Burke. In his address to the nation on the tragedy, the President honored the lost astronauts and quoted from the poem "High Flight" by John Gillespie Magee, Jr.: "We will never forget them, nor the last time we saw them, as they prepared for their journey and waved goodbye and 'slipped the surly bonds of Earth' to 'touch the face of God'."

The President also ordered an official day of mourning on the 13th of next month, when the three dead astronauts will be given a state funeral and a monument erected in their honor at Arlington National Cemetery. The family members of the three late astronauts are expected to attend. Mission Commander Alan Virdon is survived by his wife, Sally, and son, Chris. Mission Pilot Malcolm Jones is survived by his wife, Kim, and a daughter, Natalie. Mission Specialist Peter Burke was unmarried and is survived by two sisters, Valerie and Kassidy. NASA has yet to make any of the astronauts family members available to the press for comment.

The ANSA X rescue mission on the surface of Alpha Centauri II.

The report issued by NASA did not include the cause of the ANSA IX's crash landing. According to officials at the press conference yesterday, there is still not enough information for them to make that determination at this time. However, the spacecraft's magnetic flight recorder disc was recovered which should answer all questions about what happened to the ANSA IX. Unfortunately, the disc and other components cannot be examined until the ANSA X returns at in December. All ANSA flights have been suspended until cause of the crash is determined.

Senator Theodore Moorehouse of Massachusetts has called for an end to the ANSA program and a reprioritization by NASA to the stalled Space Shuttle program. He says that, "the ANSA program has now lost three ships and nine American astronauts, the highest number in the history of the country's space program. We should now focus our efforts on more sensible and safer space projects like the Shuttle". Several Senators disagree, including New Jersey's Jason Breck who wants to wait for NASA's final report before making any decisions on the future of the ANSA program.

When the ANSA X astronauts do return, they will have to be put into quarantine for six months to guard against any alien viruses they might have carried back. Rumor has it the Hasslein Institute has been selected for this project.

THE JOINT COMMITTEE ON INTELLIGENCE

INTERNAL MEMORANDUM

September 15th, 1982

To: Members of the Joint Subcommittee on Intelligence, Science

From: Majority Committee Staff

Re: ANSA X proposals and funding issues

I. Summary

On Tuesday, September 14th, at 3:00 p.m., the House and Senate Joint Subcommittee on Intelligence, Science held a closed hearing.

The meeting was chaired by Senator Hazeltine and Representative Wilson. In attendance were Senators Breck, Moorehouse and Lee; and Representatives Albertson, McConnell and Williams. Senator Baker and Rep. Sanford were unable to attend. Also in attendance were Walter Morton of NASA, John Hammond of InGen Corporation and Dr. Daniel Buckley & Dr. Joseph Farrell of the Hasslein Institute.

The first item on the agenda was the proposals from InGen and the Hasslein Institute to provide a three month quarantine for the ANSA X astronauts when they return to Earth in December. Mr. Hammond presented InGen's proposal for use of their facility in Georgia. Drs. Buckley and Farrell presented the Hasslein Institute's proposal for their facility in New Jersey. Sen. Hazeltine and Rep. Williams noted that unlike the Hasslein Institute, the InGen facility is located in an isolated area away from any population centers. Conversely, Sen. Breck noted that the Hasslein Institute's secret underground labs were perfect for the type of quarantine needed. This prompted an outburst by Dr. Farrell, who apparently was unaware of these facilities. Mr. Morton stated that NASA found both facilities acceptable.

The second item was Sen. Moorehouse's resolution to recommend a suspension of all funding of the ANSA project by Congress and directing all future funding to the Space Shuttle program. Mr. Morton, Director of the ASNA project, defended the program stating that it would do a disservice to the memories of the late ANSA IX astronauts to cut funding only one day after their memorial service. Dr. Buckley spoke in support of continuing the ANSA program, noting it's contributions to science.

II. Determination

The Committee voted 6 to 2 to accept InGen's proposal for quarantine of the ANSA X crew.

The Committee voted 5 to 3 in favor of Sen. Moorehouse's resolution.

HASSLEIN INSTITUTE OF TEMPORAL PHYSICS

WINDSOR, NEW JERSEY

PERSONAL AND CONFIDENTIAL

Date: September 15th, 1982

To: Daniel Buckley

From: Joseph Farrell

Re: Betrayal

Daniel,

I cannot express how betrayed I feel learning of that government has built a secret underground bunker beneath our Institute. It was obvious by the look on your face that you knew about it all along and never told me. That is why you fled the Capitol building after the hearing was over yesterday. I know that you couldn't face me or explain why you've been lying to me all these years. How could you do this? I trusted you. You're the godfather of my son Christopher. You were like a brother to me yet you were lying to me all this time.

You have many questions to answer, including where you went after the hearing. Stacey and I followed you to that town house in D.C. What were you doing there? When you left two hours later, who was that man you with? Is he part of this conspiracy too?

How many of our staff know about the secret bunker and who are they? I can't believe that you were the only one in on the deception.

Last night when Stacey and I got back to the Institute, we searched for the entrance and couldn't find it. Only Dr. Moore and Prof. Rockford were here at the time and they looked at us as if we were crazy when we questioned them about it. However, they did say that Drs. McKay, McQueen and Cox and several other staff members left the building shortly after receiving a phone call from you. I have to assume that they are your fellow conspirators.

I don't know if you have returned from Washington yet or when you plan to do so. But when you do I want a full tour of this secret bunker and an explanation for its purpose. I want to know why you, McKay, McQueen and Cox have been lying to me and the rest of the staff for all these years.

I also want to know if this has anything to do with the disappearance of the ANSA IX. Virdon, Jones and Burke were good men. I hope they weren't sacrificed in pursuit of some secret agenda by you and your cohorts. They deserved better. As did their families. The more I think about it now, the more I'm suspicious of the story that NASA has put out about their crash landing. I personally oversaw the refit on that ship and there was nothing wrong with it. I don't believe that it malfunctioned.

As soon as you return I expect your response and explanation.

Sincerely,

Joseph Farrell

HASSLEIN INSTITUTE OF TEMPORAL PHYSICS

WINDSOR, NEW JERSEY

PERSONAL AND CONFIDENTIAL

Date: September 16th, 1982

To: Joseph Farrell

From: Daniel Buckley

Re: Confession and Apology

Joseph,

I really want to explain everything that happened and why I took the actions that I did. I hope you will read this to the end and try to understand.

In 1973 I was contacted by Dr. Hasslein. He was working with the CIA, interrogating the evolved apes Cornelius and Zira. He wanted me to help analyze the flight data from the ANSA I craft to determine if it supported their story. I did my analysis and was on my way to Los Angeles when Dr. Hasslein was murdered by the apes. When I arrived I met with one of the CIA agents that was working with Dr. Hasslein. He would only identify himself as E-2. (I still don't know his real name.) I turned over my report to him and returned home thinking my part was done and the affair over with since the apes and Dr. Hasslein were dead.

About two months later this E-2 contacted me for another analysis on an unrelated matter. I said yes and did as he requested. When that report was completed, E-2 asked me if I were willing to become a intelligence asset. Being a patriotic American, I agreed to do it. I was given a code name, Caligari, and assigned to the Office of Navel Intelligence.

That was the extent of my involvement until June of 1975. We had just secured federal funding for the Institute from Congress and E-2 contacted me again. He said the funding was contingent on me becoming their agent inside the Institute. He informed me of the plans for the secret underground complex that I would oversee. I refused at first but then he showed me Dr. Hasslein's journal and the tapes of the interrogation of Cornelius and Zira. They paint a stark picture of the future of mankind and of this planet ending its ultimate destruction by apes in the 40th century. The goal of the CIA and the Congressional Committee it to prevent that future from happening. Our Institute is their primary instrument in achieving their goal. I believe that it is a worthy goal and fully support it. I hope that you do too. I did not want to lie to you but I had no choice in the matter. My CIA handlers would not allow me to confide in you until now. I'm sorry for lying to you all this time.

As far as the ANSA IX, you are correct. It did not crash land as reported. The craft simply disappeared when it was approaching the Alpha-Centauri system. NASA has no idea what happened to it. I still believe that it has nothing to do with the test of the temporal drive since that wasn't to occur until the return trip.

Again, I'm sorry. I hope you can forgive me and that we can move forward.

Your Friend,

Daniel Buckley

Covert Operation and Incident Report

REPORT ID:	CLASSIFICATION:	OFFICER REPORTING:	DATE:
DB-45648-HE9	Ultra Top Secret	George Kaplan	October 28th, 1982

SUMMARY	Debriefing session with Caligari and Clockmaker, agency assets embedded in the Hasslein Institute of Temporal Physics. Session took place on October 27th, 1982 at an agency safe house in Washington, D.C.
DETAIL	Caligari reported that the crisis discussed in our last meeting on September 14th, 1982 has been averted. The discloser of the underground facility at the Institute and resulting outing of him as an asset has been contained. As part of that containment a new asset (Code Named: Clockmaker) has been recruited. The deal with Clockmaker requires that he must be present at all future debriefing sessions with Caligari. Caligari reported that he gave Clockmaker a full tour of the underground facility for his approval. Caligari also gave Clockmaker access to certain top secret material including the journal of the late Dr. Otto Hasslein and the tapes & transcripts of the integrations of the evolved apes, Cornelius and Zira. After reviewing these materials, Clockmaker agreed to become an asset and support our goals. In regard to the underground facility, it is fully operational and construction of the underground railway is set to commence in January 1983. Also, Clockmaker requested the installation of a small nuclear reactor in the underground facility. He stated that the power requirements of upcoming experiments of temporal radiation will exceed what is currently available to the Institute. A determination on this will be needed on this matter in order to proceed. Additional funding will also need to be secured from the Joint Congressional Committee. One concern that both Caligari and Clockmaker voiced with the selection of InGen for the isolation of the ANSA X crew when they return in December. Both have issues with InGen's genetic research and feel the company may use whatever they discover from the Astronauts for profit rather than the benefit of all Mankind. Unfortunately, the selection of InGen was made by the Joint Committee, and since we have no assets currently embedded at InGen, there is nothing we can do to allay their fears. However, they do have a good point. InGen's autonomy could be a problem in the future. Thus, we should consider recruiting an asset working inside InGen as soon as possible just to keep tabs on their research. A full transcript of this session is attached.

The Washington Post

FRIDAY, DECEMBER 3, 1982

ANSA X RETURNS SAFELY TO EARTH

The ANSA X safely splashed down in the Atlantic Ocean just after 2 PM yesterday after a mission lasting over a year. All three astronaut were reported in good health despite their long journey back from Alpha Centauri II.

The craft's re-entry went with out a hitch. All three parachutes deployed perfectly with the ship splashing down within three miles of the recovery carrier, the U.S.S. Hornet. Helicopters and specially trained frogmen were soon dispatched to recover the astronauts and their craft. As soon as the frogmen secured the capsule, the hatch was opened and the astronauts transferred to a specially outfitted helicopter that flew them back to the Hornet.

Admiral Tierney, commander of the recovery group, called it "a flawless, textbook operation". ANSA program Director Walter Morton was aboard the Hornet to welcome the astronauts home said, "the astronauts, mission controllers and the Navy did a wonderful job today".

When they arrived aboard the carrier, the ANSA X astronauts, William Jackson, David Andrews and John McMillan were immediately placed into quarantine. They were not even allowed to step aboard the Hornet without wearing biohazard suits which they donned in the helicopter. The frogmen and the pilot were also required to wear these suits and are being placed in quarantine with the astronauts.

The quarantine is necessary to ensure that Jackson, Andrews and McMillan did not bring back an alien virus from Alpha Centauri II. They are now housed in a specially designed trailer on the Hornet. As soon as the aircraft carrier reaches port next week, the astronauts, frogmen and helicopter pilot will be transferred to a top secret facility where they will be kept in isolation for three months. At this facility they will all undergo a series of medical tests to determine if they are carrying anything that might be harmful to Human life.

The ANSA X was launched last November as a rescue mission for the ANSA IX craft that disappeared in August 1980 as it was approaching the Alpha Centauri system. ANSA X landed on Alpha Centauri II and found that ANSA IX had crashed into the planet killing the crew: Alan Virdon, Malcolm Jones and Peter Burke. Several memorials were held earlier this year when the ANSA X crew reported on the fate of their comrades.

The ANSA X astronauts going into quarantine.

The President phoned the returning astronauts aboard the Hornet. He told them, "their courage will inspire Human space explorers for centuries to come" and that they now hold a special place in history with men like Columbus and Marco Polo. Senators Moorehouse and Breck were aboard the Hornet to greet the astronauts and welcome them back to Earth.

While the astronauts will be sent to a secret location, their ship will be sent to the Hasslein Institute in New Jersey for analysis. Pieces of the wreckage of the ANSA IX that were able to be recovered, including the magnetic flight recorder disc, will also be sent there. Dr. Daniel Buckley, Co-Director of the Institute, said, "Our job will be to determined the cause of the crash, if possible, and make sure that it never happens again".

However, despite what they may discover at the Hasslein Institute and despite the successful return of the ANSA X; sources in Washington say that the President is seriously considering ending the ANSA program in favor of increased funding for the Space Shuttle and his proposed Strategic Defense Initiative program.

INTERNATIONAL GENETIC TECHNOLOGIES
INTERNAL MEMORANDUM

DATE: January 7, 1983

TO: John Hammond, President

FROM: John Kyle, SVP, Director Research & Development

RE: ANSA X Crew Analysis

STATUS REPORT

The ANSA X astronauts (Jackson, Andrews and McMillan) have been examined and tested for all known viral and bacterial infections. All results have been negative. They have also been examined for radiation poisoning. Again, all results were negative. To date only two abnormalities have been detected. The first being a minor three to five point drop in IQ in all three astronauts. After discussing with NASA officials, this is most likely due to mental fatigue resulting from the long duration of their mission.

The second it more interesting, numerous blood samples have been taken from all three astronaut and an unknown pathogen has been discovered in the blood of Will Jackson. Tests and analyses of this pathogen have determined that it is not harmful to Human life. However, Humans and other primates act as carriers.

Additional test have been conducted on other forms of animal and plant life. Almost all have been negative with the exception of species in the Felidae and Canidae families. Most notably in domesticated dogs and cats. While animals such as tigers, lions, wolves and foxes have become very sick when exposed to this pathogen, the usually recover in a few weeks. But it is fatal for dogs and cats in all cases tested to date.

This presents the company with a unique opportunity. If you recall my memo of 12/17/81, our Hoboken facility was working on developing a species of domesticated apes using genetic material from the ape-o-naut Milo. The most recent report from Hoboken is that they have perfected the process of genetic manipulation to create three species of "domesticated" apes: orangutans, gorillas, and chimpanzees.

Thus, I have a proposal. I have directed our scientists to refine this virus so is spreads more quickly and to increase its potency against domesticated dogs and cats. They assure me they can do this while making it completely harmless to all other animal and plant life.

When Jackson, Andrews and McMillan are released from quarantine in March NASA is sending them on a world tour. Agents of the company can be sent to the cities and countries that they visit and release the virus in these locations. When the local dogs and cats begin to become sick and die, it can be blamed on the Jackson's visit. We estimate this could result in an over 50% drop in the worldwide dog and cat population within six months. Of course, there will be inquiries as to why we didn't detect the virus during quarantine. But that can be explained by noting that it is an unknown alien virus and that we only tested for agents which are harmful to Humans.

Also, we should set up a separate company for the development, marketing and management of our line of domesticated apes. We should form this Ape Management company through several of our shell corporations oversees so it can not be traced back to InGen in any way. Thus, we will not be seen as profiting from a situation that we may have helped to cause. In a few years, InGen can publically acquire this company with no one the wiser.

I hope that you will approve this proposal. I know that you are focused on the Costa Rica project at the moment, but we need to move forward on this very quickly.

Thank you, Please let me know if you have and questions or comments.

THE NEW YORK TIMES **INTERNATIONAL** *TUESDAY, JULY 12, 1983*

New York Welcomes ANSA X Astronauts Home With Ticker-Tape Parade on Broadway

NEW YORK CITY - After a three month tour around the country and the world, the crew of ANSA X were welcomed home with a traditional ticker tape parade up Broadway. Astronauts William Jackson, David Andrews and John McMillan rode up the 'Canyon of Heroes' on Monday with their wives while being showered with confetti by office workers. The parade ended at City Hall where Mayor Koch presented each of the Astronauts with a Golden Apple and a special proclamation naming them honorary New Yorkers. Other speakers at the ceremony included New York Governor Mario Cuomo, U.S. Senators Daniel Patrick Moynihan of New York and Jason Breck of New Jersey.

Jackson, Andrews and McMillan ride up the 'Canyon of Heroes'.

New York City is the last stop on the astronauts world tour that began three months ago in Chicago. Prior to that they spent three months in quarantine at an undisclosed location after returning from their long mission to Alpha Centauri. Sent to investigate the disappearance of the ANSA IX spacecraft, they became the first men to step foot on an alien planet, Alpha Centauri II.

In the last three months, Jackson, Andrews and McMillan have visited cities around the country and the world including Miami, Chicago, Los Angeles, Honolulu, Tokyo, Sydney, Baghdad, Jerusalem, Cairo, Johannesburg, Rome, Paris and London. They were even the first American Astronauts to be allowed behind the Iron Curtin making stops in both Peking and Moscow.

In London, Queen Elizabeth II bestowed all three with honorary Knighthoods. In LA, they became the first non-movie stars to have their foot and hand prints persevered in front of the famous Mann's Chinese Theater. In most cities, they were given parades and treated like conquering heroes.

The purpose of the world tour to was to garner support for NASA's Advanced Nuclear Stellar Acceleration program (ANSA) that has recently come under fire in Washington. The program began over 10 years ago with two failures, the disappearance of both ANSA I, commanded by veteran astronaut George Taylor, and ANSA II sent as a rescue mission for Taylor's ship. After the return of ANSA I in 1973 (crewed by the Ape-o-nauts Cornelius, Zira and Milo), the program was retooled and was on a successful path until the crash of ANSA IX on Alpha Centauri II killing astronauts Alan Virdon, Malcolm Jones and Peter Burke.

Critics of the program say that it is too expensive and far too dangerous to continue at this time. They favor in Shuttle program which is much cheaper to operate and has been a total success to date. According to White House insiders, the President is leaning towards ending the ANSA program and diverting the funds to the Shuttle and his SDI program. A vote on this is expected in Congress in the next few months.

Scientists Baffled by Mysterious Dog and Cat Plague

LONDON - Scientists and Veterinarians from all over the world are mystified by an unknown disease that is killing common household Dogs and Cats. So far cases have been sporadic but have occurred all over the world. The first reported cases were in the United States, in Chicago and Los Angeles simultaneously about two months ago. Since then cases have been reported in Japan, Australia, Israel, Italy and England. Though not confirmed, there are rumors of cases in the USSR.

While only a few hundred pets have died, there is a rush to find a cure before it spreads further.

Re: Dog and Cat Plague

Joseph,

I just got off the phone with Senator Breck. They are freaking out in Washington over the Dog and Cat plague. As you know, it was the first of Cornelius and Zira's prophecies and it is now coming true. Thank god the tapes of those interrogations were kept top secret or the public might be panicking too. They are really surprised at how quickly this thing has spread. It has become a worldwide epidemic in less than two months. In Asia, there are bonfires of infected animals to try to stop the spread of the disease. Another part of the prophecy fulfilled.

Anyway, Senator Breck wants us to go down to Georgia and review InGen's records on Jackson, Andrews and McMillan during their quarantine there. It is evident that one of the astronauts brought this disease back and InGen missed it. The Joint Committee has fully authorized us to do this and ordered InGen to comply. They want us down there in two days to start the review. I've assigned Prof. Rockford and Dr. Cox to the review team. I'm sure that Drs. Moore and McKay can takeover the new line of research on the temporal radiation in our absence. I understand that Moore's daughter Alexandra has become a real asset to the team.

Additionally, Breck told me that this plague has put the final nail in the coffin of the ANSA program. He expects the President to announce it's cancellation within the next two weeks. The plague has emboldened the critics of the program. They say this proves that it is far too dangerous to continue. This makes our new line of research a top priority. Breck wants us to present it to the Joint Committee when we make our report on InGen. He asked if we can have it all ready by the next meeting at the end of September. I hope that is possible.

I expect that you'll be bringing Stacey with you to Georgia to assist you. If you want to bring little Christopher and his nanny, I'm sure the Joint Committee with cover the expense. They'll understand that you need to have Stacey with you and that you don't want to leave your two year old home alone for so long. Since we'll be down there over Labor Day weekend; I'm thinking of having Donna bring David and Josie down for that weekend. Maybe we can all do something together. A friend of mine that lives in Atlanta told me that there is a circus currently touring Georgia which has a chimp that can ride a horse. That's something the kids should enjoy seeing. I can't remember the name of the circus but I'll call him when we're down there and get all the details.

We should all be ready to leave for Georgia by tomorrow night. Please let me know if you have any questions or comments.

Your Friend,

Daniel Buckley

THE JOINT COMMITTEE ON INTELLIGENCE

INTERNAL MEMORANDUM

September 28th, 1983

To: Members of the Joint Subcommittee on Intelligence, Science

From: Majority Committee Staff

Re: InGen Quarantine Review

I. Summary

On Tuesday, September 27th, at 11:00 a.m., the House and Senate Joint Subcommittee on Intelligence, Science held a closed hearing.

The meeting was chaired by Senator Hazeltine and Representative Wilson. In attendance were Senators Breck, Moorehouse, Baker and Lee; and Representatives Albertson, McConnell, Sanford and Williams. Also in attendance were Dr. Daniel Buckley & Dr. Joseph Farrell of the Hasslein Institute.

The first item on the agenda was the review of InGen's quarantine of the ANSA X astronauts earlier this year. Drs. Buckley and Farrell testified that they and their team had conducted an extensive review of InGen's records. While overall their procedures were sound and within the scientific parameters that InGen was tasked, there were some minor oversights by the staff at the quarantine facility:

1. InGen only tested for viruses and other diseases that were harmful to Human life and conducted no tests on other animal or plant life.
2. InGen's equipment while highly sophisticated was inadequate to detect alien contagions.

Buckley and Farrell did not recommend any sanctions or penalties against InGen but did recommend a suspension of all government contracts until these oversights can be corrected.

The second item was a proposal by Buckley and Farrell for a new line of temporal radiation research. Since the ANSA program has been canceled by the President, they have developed a new procedure to study and possibly harness the potential of this radiation. Additional funding from the committee will be needed to continue this line of research.

II. Determination

The Committee voted 9 to 1 to suspend all of InGen's current government contracts.

The Committee voted 7 to 3 in favor the Hasslein Institute's funding proposal.

TO: Senator Jason Breck

RE: Ape Management Inc.

PERSONAL AND CONFIDENTIAL

Jason,

I understand that you are opposing Ape Management Inc. opening a facility in your state. This is a very shortsighted position for you to take at this time. Now that all the dogs and cats in the world have died, people will want a new source of household pets. This will be a very profitable business for your state. They have already opened a facility in Georgia and the sales are through the roof. I hear the same is true in the states out west where they have opened. Since the facility in your state will supply the New York market it has the potential to be the biggest, most profitable in the country, possibly the world.

It is no secret that you are planning to run for Governor in two years. Do you really want your opponent to be able to attack you with costing your state hundreds of jobs and millions in tax revenue? Also, I'm sure if you helped spearhead support for Ape Management, they would be very helpful in fundraising for your campaign. So would InGen. They've already made a deal to sell part of their Hoboken plant to Ape Management. Because they lost their government contracts, InGen needs the infusion of funds right now for a project they have started in Costa Rica.

I do understand your concerns. I share them. But since Otto Hasslein killed the evolved apes and their baby, we don't need to be worried about an ape takeover of the planet. We know what problems to watch out for and can avoid them. We shouldn't stand in the way of the free market. Plus, these domesticated apes are the sweetest, most inoffensive of creatures. I just got one for my 9 year old grand-daughter and she loves it. It has never bitten or scratched her like dogs and cats were prone to do. They even sleep in the same bed together. There is really nothing to worry about with these pets. I really hope you will reconsider your position.

Additionally, I really want to end or curtail the investigations of InGen. They made a mistake and paid the price by losing their government contracts. Any further investigation is just a witch-hunt that could end up being embarrassing for the both of us because of our ties to the company. Unfortunately, Senator Moorehouse is on a vendetta because his beloved dog Splash died in the plague. You've always had a good relationship with him. Maybe if you spoke with him, you could persuade him that any further investigation of InGen would serve no purpose but to damage a good American company.

Finally, I heard that your wife is ill again. Please send Donna my best wishes for a speedy recovery. She beat cancer before. I hope and pray that she will again. Donna is a great gal and has always been a great political partner for you. She'll need to be healthy and strong for your gubernatorial campaign in '85.

Have your aide Mr. MacDonald call my assistant and arrange for us to have lunch soon.

Ape Management Posts Record 2nd Quarter Profit

Ape Management, Inc. has reported a $238 Million profit for the 2nd Quarter of 1984. A record for any company in its first year of operation. The worldwide company has shown incredibly fast growth since its founding less than a year ago in the wake of the Dog and Cat plague.

CEO John Reilly announced the record profit at the company's first annual stockholders meeting in London last week. He told stockholders, "The crisis caused by the death of all the dogs and cats on the planet created an opportunity that we successfully exploited. However, while we have profited from this crisis, we have also filled a need for the people of the world and that is just as satisfying as our success".

It is true that Ape Management has fulfilled a need that has been embraced by all levels of society. Pop star Michael Jackson is rarely seen without his pet chimp. The President has also adopted a chimpanzee that roams freely through the White House. But the most accepting of these new household pets are children. It is now common to see small children in parks and playgrounds playing with their pet apes. Reilly noted his wife has a pet chimp, Lisa, that has become a beloved part of their family.

This new breed of domesticated apes are far different than their counterparts in the wild. They are far less aggressive, some would say even gentle. They are not as strong which is key to making them suitable pets. And they are more intelligent making them easily trainable. One stockholder at the meeting said that her pet gorilla has learned how to help her maid wash dishes and make beds.

One thing is for sure, apes pets are here to stay and Ape Management plans to take full advantage of the situation. They already have 15 training and sales facilities around the world from Tokyo to London. Five of these facilities are in the U.S. in Georgia, Illinois, New Jersey and two in California. Ape Management, Inc. plans to triple that number by the end of the year with new plants in South America, Europe and Asia. They are even in talks with the U.S.S.R. and the People's Republic of China to open several facilities in those countries.

Ape Management's largest facility is outside Hoboken, New Jersey and supplies pet apes to all of New York City and vicinity. Senator Jason Breck opposed the opening of that plant when it was first proposed but the Gubernatorial candidate has now embraced the company because of the economic boom it has brought to his state.

However, everyone is not a fan. Dr. Joseph A. Farrell of the Hasslein Institute in Windsor New Jersey has denounced the practice of keeping apes as pets and Ape Management. He said, "This company is playing with fire. Apes are wild animals that should be locked up in zoos and not allowed to roam freely in our homes. This is a very dangerous business that will harm our children and may one day lead to the very downfall of the human race".

TIME, APRIL 9, 1984

INTERNATIONAL GENETIC TECHNOLOGIES
INTERNAL MEMORANDUM

DATE: February 5, 1985

TO: John Hammond, President CEO

FROM: John Kyle, SVP, Director Research & Development

RE: Ape Management Project

Mr. Hammond,

I am pleased to report that this project has been a complete success beyond our wildest dreams. Sales are more than double our original projections. That is partly due to our underestimating the effectiveness of the virus from the ANSA astronauts that we released throughout the world. We estimated that 50% of the dog and cat population would be infected and die. However, the virus was far more virulent than we expected leading to an almost 100% mortality rate of dogs and cats which in turn lead to the increased sales.

Our effort to hide all connections between InGen and Ape Management have also been totally successful. No one in the private or public sector suspects that InGen has anything to do with Ape Management apart from our sale of a section of InGen's Hoboken facility. In fact, that sale convinced many that they are two separate companies. In a few years, we can have InGen buy out Ape Management in a public sale making it a wholly-owned subsidiary. Until then it is best for everyone to believe they are two separate companies.

There are several next steps that we'll need to take over the next year or two to keep the company growing. The first is opening more plants and facilities around the world. Over the next six months we will open 20 new plants around the world, Eight of these in the U.S. We have successfully negotiated with Soviet officials to open a plant outside Moscow. We are still in the process of hammering out the same agreement with Red China for a plant near Peking. Within five years my hope is to have a major facility on every continent and a plant in or near every major city on the globe.

The second step has to do with our product. Current projections estimate that we'll start hitting a level of market saturation within three years. When this happens sales will level off and slow our growth. Therefore, we must produce an enhanced product to keep sales rising. Our sales team has followed up with customers and found that many have trained their pets apes to do menial tasks, such as helping to make beds and mop floors. What if we can introduce a line of apes that are pre-trained for these unskilled tasks? That would encourage consumers to buy another ape or trade in their current ape for an upgraded one for a small fee. We can also charge for customers to bring in their current ape to one of our facilities for training.

Also, this has the potential to open a completely new market beyond households to small and midsize businesses. Our geneticists have assured me that they can produce an enhanced line of apes within a year to 18 months. They would be a little larger and smarter but would still be safe with reduced muscle capacity.

On another matter, I've spoken with Senator Hazeltine and he assured me that some of our government contracts with be restored within the next six months. He assures me that Reps. Williams and McConnell and Senators Lee and Baker will vote with him to lift the ban.

Hazeltine reminded me that Senator Breck is running for Governor of his state this year. Several large cash contributions by the company and high level executives and their family members should ensure Breck's vote before he leaves the Joint Committee and guarantee his victory in November. We would then have a friend in a powerful statehouse who may be on the road to the White House one day. An investment of $3 Million should be enough and will need your approval to proceed.

Thank you, Please let me know if you have and questions or comments.

THURSDAY, JANUARY 2, 1986

JASON BRECK INAGURATED AS GOVERNOR

OUTLINES BOLD PLAN FOR NEW CAPITOL CITY

Assembly applauds Governor Breck during his inaugural address.

TRENTON, NJ - Jason Breck took the oath of office at noon to become the state's new Governor. Due to the weather the swearing in ceremony was held inside the capitol building in the state assembly chamber. Unfortunately, the new Governor's wife was and not able to attend.

In his inaugural address, Governor Breck proposed the creation of a new capitol city for the state. Calling it "A megalopolis to rival New York City", Breck's plan would consolidate Newark, Hoboken and Jersey City in to one large city. Breck made the case that such a capitol city would be necessary for the state to compete economically with New York and other large states around the country in the years ahead.

During the speech he outlined his plan for the new capitol. It will be a major transportation hub with a large shipping port and underground railway system. The centerpiece will be a civic, business and shopping center that will be a pedestrians only zone with no cars or trucks allowed. According to Breck's plan, this all can be completed in only three to five years.

The new Governor reveled that he has already secured agreements with several major in state companies such as InGen, Johnson & Johnson, Ape Management and AT&T to help fund the construction of this new city.

While Governor Breck's proposal is radical it was very popular with the assembled lawmakers in the chamber. Breck was elected Governor last November in a landslide victory, winning over 70% of the vote. His victory was so huge that it swept in big majorities for his party in both the General Assembly and State Senate. So there is little doubt that Breck's plan will be approved very quickly.

Breck's first order of business will be to appoint someone to his vacated seat in the U.S. Senate. It was thought that he would appoint his longtime aide Harry MacDonald but that speculation ended when the Governor appointed MacDonald to be his chief of staff.

HASSLEIN INSTITUTE OF TEMPORAL PHYSICS

WINDSOR, NEW JERSEY

INTERNAL MEMO

Date: May 12th, 1986

To: Daniel Buckley, Sc.D.

From: Joseph Farrell, Ph. D.

Re: Temporal Vortex Experiments and other issues

Daniel,

I think that we are ready to conduct the first experiments on the Temporal Vortex theory. The nuclear reactor in the underground facility is up and running and it has passed all safety tests; so we should have the power needed to start the experiments.

Dr. Cox will lead the team with Dr. Alexandra Moore acting as his assistant. She has really become a fine scientist and asset to the Institute in only a few short years.

Has NASA decided what we are to do with the ANSA XII spacecraft yet? We've had it in storage for years since the program was cancelled. I realize that they have no use for it now but leaving it here just takes up our storage space. One might think they would want it back as a museum piece to display at the Space Center. Since our main contact Walt Morton left last year, there is no one at NASA willing to take responsibility for this decision or at least willing to respond to our requests. Maybe we should think about contacting Senator Hazeltine to move this along.

Several staff members have been pressing me about using these servant apes for some of the Institutes' more menial tasks. I'm totally against this and think we should issue an official policy statement forbidding any servant apes on the grounds. I know this will be highly unpopular since servant apes are the new fad but I'm completely opposed to their use. They take away jobs from Human workers and the whole idea is playing with fire. I only wish the public had seen the tapes of Cornelius and Zira that we did. Then they might not be so eager to have a servant ape in their homes.

Finally, I think we should accept Governor Breck's invitation to the groundbreaking ceremony for the new capitol city. Breck has been a constant ally to us over the years. He supported us when he was in Congress and has continued to use his influence down in Washington to keep us funded. Attending the ceremony will be a good way to show our appreciation and support. Although I wish he would come up for a name for the new city. People are starting to call it Megalopolis which is a very terrible name. Breck really needs to name the city before that one starts to stick.

My love to Donna and the kids. And congratulations, I hear little David won his school's Science Fair. You must be very proud.

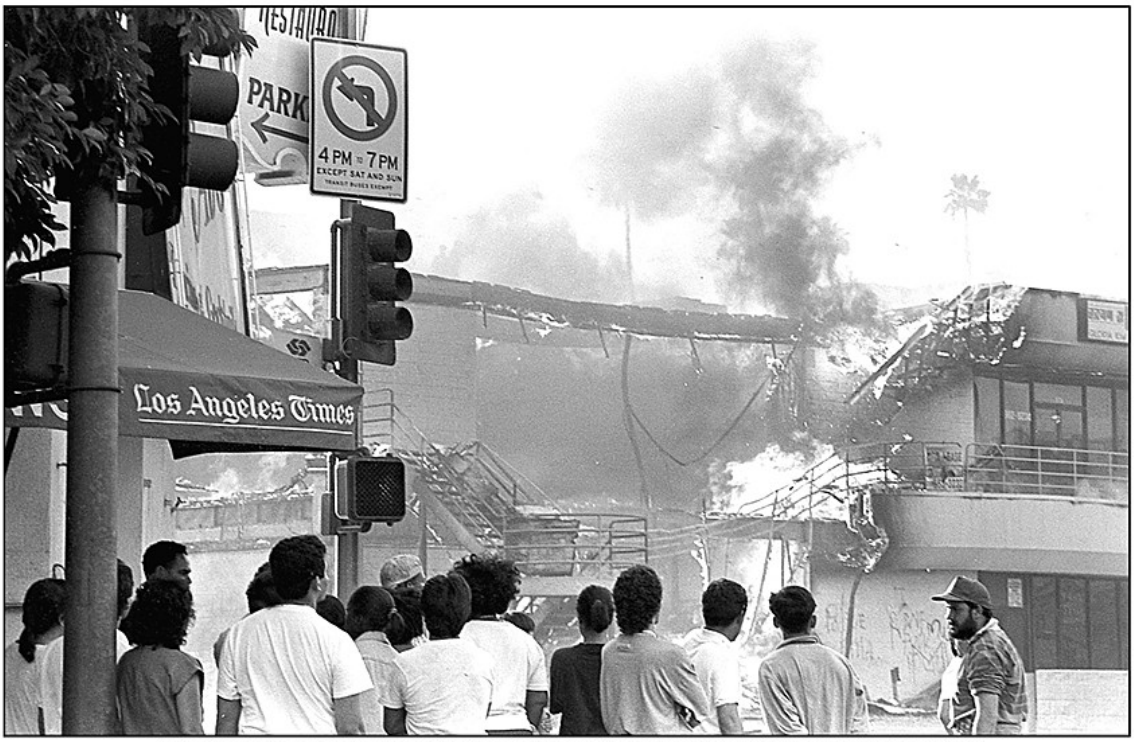
Your friend,

Joseph Farrell

The Washington Post

WEDNESDAY, APRIL 6, 1988

RIOTS PROTESTING SERVANT APES CONTINUE IN SEVERAL CITIES



One of several Ape Management offices burned by rioting workers in cities around the country.

Union workers continued to riot in several cities across the country protesting the use of servant apes by both the government and major corporations. What began as a peaceful protest in Los Angeles a month ago quickly turned violent when marchers headed toward the Ape Management offices in that city. Local police tried to block the marchers but tempers flared and soon rock were thrown and shots fired.

While this was first assumed to be an isolated incident, the next day workers in New York, San Francisco, Atlanta, Dallas, Chicago and a dozen other cities were out in force in support of their brethren in LA. The target of their ire was Ape Management. The main grievance being that servant apes are taking away jobs from average working people.

After several weeks of violence and anarchy, local Police were unable to control the protestors. In several cities, including LA, Ape Management offices were over run by angry mobs and either wrecked or in some cases set aflame.

While unions have been objecting to the use of servant apes since their introduction, tensions have been growing since Congress passed the Simian Service Act late last year which cleared away any barriers for the use of servant apes by manufacturers and by federal, state and local governments. Supporters of the law say that it only allowed for the use of apes in low skilled and high risk jobs that most Humans workers refuse.

Reaction to the riots was swift in Washington. Senator Wendell Hazeltine of Georgia denounced the rioting workers as terrorists. He has called on the President to declare martial law in the cities and plans to introduce new security legislation to limit protests, allow for unlimited detentions and increase police presence across the country.

HASSLEIN INSTITUTE OF TEMPORAL PHYSICS

SUMMARY REPORT

DATE: 03/09/89	**REPORT ID:** 4879HYD-982KUE	**PROJECT:** Temporal Vortex Experiment
PROJ. LEADER: Dr. David Cox	**PROJ. TEAM:** Dr. Moore, Dr. McQueen, Dr. Farrell	
CLASSIFICATION: Top Secret	**PROJ. LOCATION:** HITP Lab. #U22	**DISTRIBUTION:** DOD

FINDINGS

To date, 57 attempts have been made to recreate a temporal vortex in the laboratory similar to those that were able to be generated in space by unmanned probes and ANSA spacecraft. All attempts have failed.

Early experiments assumed that the vortex could be recreated under laboratory conditions by adjusting the intensity of the radiation field. All such attempts failed.

Further experiments changing the wavelength output of the generator also failed.

The next series of experiments tested the theory that the vortex could only be generated in the vacuum of space, similar conditions to which a spacecraft would experience. None of these experiments were successful either.

A further series tested if velocity was a possible factor. These experiments also failed.

The current series is pursuing the hypotheses that gravitational forces may be at play and that it may only be possible to recreate a vortex in a weightless environment. The first of these experiments has shown promise.

Using a small centrifuge to simulate a weightless environment in the lab, a small vortex was created for a total of 0.004 milliseconds. This was the first successful attempt to recreate the vortex.

Unfortunately, all attempts to create a vortex for a longer period of time or a larger vortex have failed.

Thus, the team has come to the conclusion that it is not possible to do so using equipment currently available to the Institute. A much larger centrifuge will be needed along with other equipment and greater power requirements.

It is the recommendation of the entire research team that this line of research and testing be continued and that the Institute secure the proper equipment needed to do so. It is also recommended that the size of the nuclear reactor be doubled in order to generate the power that will be needed for future experimentation.

Additionally, Dr. McQueen believes that it might be possible to generate a gravity-free environment without the use of a centrifuge. While theory will require years of testing before it can be of any practical use, it is recommended that this line of research also be pursued by a separate team within the Institute.

The full detailed analysis report is attached.

GOVERNOR BRECK DEDICATES NEW CITY

Government Plaza of the new Capitol city dedicated yesterday. Insert: Gov. Breck arrives at dedication.

MEGALOPOLIS - Governor Jason Breck dedicated the new capitol city of the state yesterday. The new city took over five years to build and incorporates what were the cities of Newark, Hoboken and Jersey City. Unfortunately, the Governor's wife was unable to attend the ceremony due to illness.

In his speech Gov. Breck said, "Our state now has a new city to rival New York just across the river". Many major businesses are relocating their headquarters to the new city including AT&T and InGen. Ape Management has already expanded its facility to service the entire northeast region of the country.

The new city features a major port and railway hub but the centerpiece is the pedestrian mall & shopping center and the government plaza. The dedication ceremony was held in the government plaza.

On hand for the ceremony were many prominent dignitaries including: Vice President Dan Quayle; John Hammond, CEO of InGen; Harold T. Shapiro, the President of Princeton University and Dr. Daniel Buckley, Director of the Hasslein Institute. Frank Sinatra, born in Hoboken, also attended and sang the national anthem at the ceremony. Bruce Springsteen was invited but declined stating his opposition to what he called Gov. Breck's "police state" policies and aggressive use of simian labor in the building of the new city.

In his speech Vice President Quayle praised Gov. Breck for "his vision showing the world what limited government can achieved when working with private business". Many were surprised that Quayle would compliment Breck as the two are seen as potential rivals for their party's nomination in 1992.

Outlined in his first State of the State address and completed in only five years, the new city is a great achievement for Gov. Breck.

THE JOINT COMMITTEE ON INTELLIGENCE

INTERNAL MEMORANDUM

January 18th, 1990

To: Members of the Joint Subcommittee on Intelligence, Science

From: Majority Committee Staff

Re: Hasslein Institute Funding/InGen Request

I. Summary

On Wednesday, January 17th, at 3:00 p.m., the House and Senate Joint Subcommittee on Intelligence, Science held a closed hearing.

The meeting was chaired by Senator Hazeltine and Representative Jacobs. In attendance were Senators Moorehouse, McConnell, Baker and Jones; and Representatives Albertson, Cagney, Sanford and Williams. Also in attendance were Dr. Daniel Buckley of the Hasslein Institute and John Hammond of InGen.

At the start of the meeting, Senator Hazeltine announced that he will not seek re-election and will retire from the Senate at the end of his current term.

The first item on the agenda was continued funding of the Hasslein Institute. Dr. Buckley testified to the success of the line of research the Institute has been perusing the last few years and asked for an increase for the next level of experiments. Senator Moorehouse voiced his concern that the Institute's research is very dangerous if it fell into the wrong hands. Senator Hazeltine recommended that the NSA station a security detail at the Institute to address these concerns.

The next item was an appeal by John Hammond for the committee to endorse InGen's acquisition of Ape Management Corporation. Rep. Sanford noted that the committee has no power over the approval process by the SEC. Hammond argued that InGen's genetic research will help Ape Management produce more docile and obedient servant apes, which is a security issue under the committee's purview. Senator Hazeltine agreed and proposed having the committee issue a secret memorandum to certain officials of the SEC to support the acquisition.

II. Determination

The Committee voted 8 to 2 to increase the funding of the Hasslein Institute's current research with additional NSA security.

The Committee voted 6 to 4 in favor of Senator Hazeltine's proposal to issue a secret memorandum to the SEC in support of InGen.

HASSLEIN INSTITUTE OF TEMPORAL PHYSICS

WINDSOR, NEW JERSEY

PERSONAL AND CONFIDENTIAL

Date: April 11th, 1990

To: Joseph Farrell

From: Daniel Buckley

Re: Congressional Appropriation

Joseph,

Good news, congress has finally approved the new appropriation recommended by the Subcommittee back in January. Unfortunately, we have to accept a permanent presence of NSA agents here at the Institute. Hopefully, they will not interfere with our research.

Thanks to the increased funding we should be able to pursue Dr. McQueen's theory to generate a gravity-free environment without the use of a centrifuge. We have already ordered new computers and other equipment needed to conduct the experiments. The capacity of our current nuclear reactor will be doubled which should give us the power needed to pursue this research.

I've spoken with Dr. McQueen and Dr. Cox and they are confident that the gravity-free environment is the key to recreating a temporal window on Earth. They estimate that that Phase I, creating a large gravity-free zone, can be achieved in 3 to 5 years. We can then proceed to Phase II which they estimate will take another 5 to 10 years of experimentation. At least this will give us all job security for the next 8 to 15 years. HAHA!

Additionally, with the new funding the underground facilities will be expanded. Part of this expansion will be a secret rail link with Washington and Megalopolis. I hope this will facilitate the movement of equipment in and out of the Institute. Maybe we can finally get rid of the ANSA XII spacecraft. It has been taking up storage space down there for years.

Finally, I wish you would reconsider attending the memorial service for Governor Breck's wife on Friday. While she had been ill for years, her death is still a tragedy for the Governor. I know that you have many disagreements with his security policies and the use of simian labor; but he has always been a good friend to the Institute and a valuable political ally. Now that Senator Hazeltine is retiring, we'll need his support more than ever. He still as many powerful friends in Washington. Donna and I plan to go, as are many others on the senior staff. I hope that you change your mind and that you and Stacey will come too.

Give my best to Stacey and to little Christopher. He's really getting big and I understand that he's shown an aptitude for science. Like father, like son I guess.

Please let me know if you have any questions or comments.

Your Friend,

Daniel Buckley

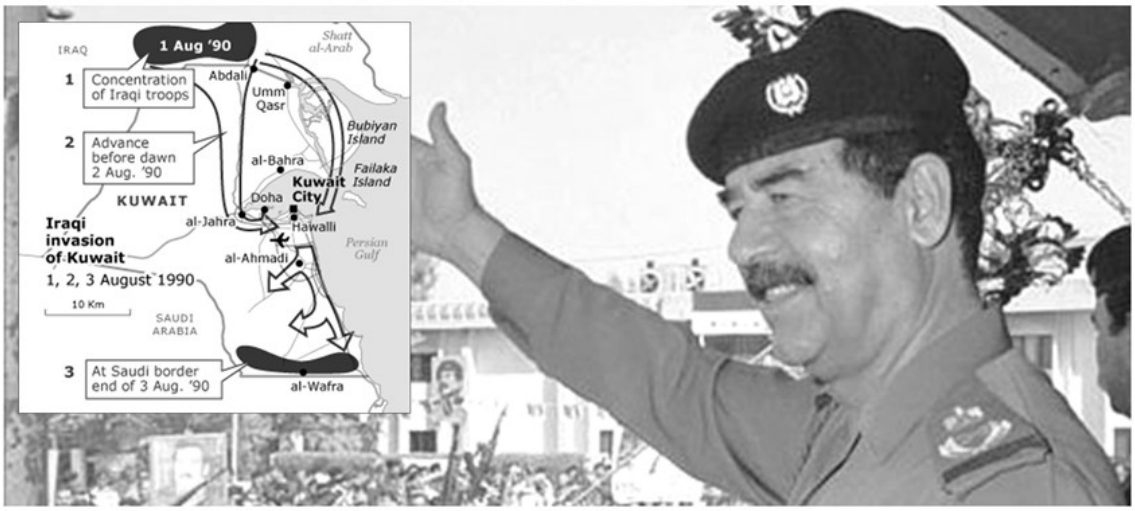
INVADING IRAQIS SEIZE KUWAIT AND ITS OIL



Iraqi leader address crowds in Bagdad. Inset: Map of invasion.

U.S. CONDEMNS ATTACK, URGES UNITED ACTION

By APPLE Jr., Special to The New York Times

WASHINGTON, Aug. 2 - Iraqi troops stormed into the desert sheikdom of Kuwait today, seizing control of its capital city and its rich oilfields, driving its ruler into exile, plunging the strategic Persian Gulf region into crisis and sending tremors of anxiety around the world.

The President condemned the invasion as "naked aggression" and sought to enlist world leaders in collective action against Iraq.

Faced with a dire threat from the truculent Iraqi leader, Saddam Hussein, to a region containing much of the world's oil reserves and with world financial markets in turmoil, the President banned nearly all imports from Iraq and froze the nation's assets in the United States. At a news conference in Woody Creek, Colo., the President and Prime Minister Margaret Thatcher of Britain raised the possibility of economic or even military action by the United Nations.

Iraq Suspends Payments

In response, Iraq, which had been accusing Kuwait for weeks of stealing its oil and violating production limits set by the Organization of Petroleum Exporting Countries, suspended debt payments to the United States. Western experts asserted that Iraq had been motivated by a financial squeeze that only more oil dollars could ease and by ambitions for regional dominance.

State of New Jersey
OFFICE OF THE GOVERNOR

JASON BRECK
GOVERNOR

October 3, 1990

President of the United States
The White House
1600 Pennsylvania Avenue
Washington, D.C. 20500

Mr. President,

We have been friends and political allies for many years. I have always trusted your judgment and leadership without question. I fully support your efforts to liberate Kuwait from the forces of the dictator Saddam Hussein. However, I am concerned that focus on these events in the Middle East has caused you to lose sight of certain problems that exist here at home. Specifically, the rising tide of disobedience by servant apes in our major cities.

Since the Iraqi invasion of Kuwait last August, you have ordered the transfer of hundreds of active and reserve military units to Saudi Arabia to take part in the eventual liberation of Kuwait. While I support this effort, few if any units have been left here to guard our homeland. I have discussed this issue at length with Secretary Cheney, he feels that there is no threat of a servant ape rebellion and that any incidents of widespread disobedience can be dealt with by local police forces. I respectfully disagree.

There are now over 20 million servant apes in this country, almost a half a million in my capitol city alone and over a million in New York City just across the river. While I have full confidence in my state's security services (and they are as good as any military unit I have ever seen), they are still only a police force. They do not have the equipment and resources available to the Army or Marines. In any widespread ape revolt they would ultimately be overwhelmed by shear numbers without the support from artillery, tanks, the air force, etc. that the military can provide.

Over the past year incidents of violent disobedience by servant apes has been growing at an alarming rate. There is now at least one per month across the country. You recall the incident in Denver last spring in which a dozen apes went wild in a shopping center. Ape Management claimed that was a aberration cause by faulty conditioning at their local training facility. However, if you study the patterns of recent incidents a disturbing trend can be seen. The level of violence against human owners has increased and while there has been no loss of human life, I believe that such an incident is ultimately inevitable. What is far more concerning is the co-ordination and organization of some of these incidents involving multiple apes. They are learning to work together.

Therefore, I recommend that some of the military units currently being deployed to the Middle East be held back to defend the homeland. Only 10% of the forces currently slated to be sent to Saudi Arabia would be needed. That would still provide an overwhelming force for the liberation of Kuwait while ensuring safety and stability here at home. I strongly urge you to seriously consider this recommendation.

Thank you Mr. President.

Sincerely Yours,

Jason Breck

KGB SEIZES CONTROL IN MOSCOW

Gorbachev and Yeltsin Arrested

Tank roll on the streets of Moscow in support of KGB coup.

MOSCOW, Dec. 12 - KGB Chairman Vladimir Kryuchkov, made a "call for order" over Central television in Moscow last night and declared a "state of emergency" in the Soviet Union effectively seizing control of the government. Kryuchkov said his actions were necessary to restore order in the country.

After the speech, Soviet Defense Minister Dmitriy Yazov, Internal Affairs Minister Boris Pugo, Premier Valentin Pavlov, Vice-President Gennady Yanayev, Soviet Defense Council deputy chief Oleg Baklanov, Gorbachev secretariat head Valeriy Boldin, and CPSU Central Committee Secretary Oleg Shenin all declared their support for Kryuchkov.

Soviet President Mikhail Gorbachev and Russian President Boris Yeltsin denounced Kryuchkov, calling the "state of emergency" a coup d'état. Both were placed in "protective custody" by order of Kryuchkov and his supporters.

By morning, army tanks were deployed throughout Moscow and several major cities to quell any civil disorder. Mass arrests of dissidents have already begun throughout the U.S.S.R. as Kryuchkov and his political supporters consolidate their hold on power.

The President and European leaders have condemned the Soviet coup and called for the immediate restoration of legal government.

Kryuchkov responded by voicing support of Saddam Hussein's invasion and occupation of Kuwait, pledging military support to Iraq. Several Soviet units have already been dispatched to Kuwait.

The President has ordered that all remaining reserve units, which had been held back for domestic security, be sent to Saudi Arabia to face the new Soviet threat there.

Continued on page 2

BRECK ORDERS INCREASE IN STATE SECURITY FORCES

MEGALOPOLIS, Dec. 12 - Governor Jason Breck has ordered an immediate increase in the size of the state's Security Forces. In a statement issued by the Governor's office, this increase is due to the President's order to deploy all remaining reserve military units to the Middle East. Thus, more civil security will be needed to deal with any disobedience by servant apes.

Breck also appointed a new Chief of State Security, Arthur Kolp, formally an officer in the Office of Navel Intelligence.

The Governor's actions have not received universal support. Several civil right groups have denounced ...

INTERNAL MEMO

Date: April 11th, 1991

To: Daniel Buckley, Sc.D.

From: Joseph Farrell, Ph. D.

Re: Institute Security and other issues

Daniel,

I just got off the phone with Defense Secretary Cheney, due to the on-going stand off with the Russians and Iraqis over Kuwait, the military can't spare any extra personnel for security here. He recommended that we appeal to Governor Breck for state security forces. I know we disagree on this but I don't think situation is that dire. The threat is thousands of miles away in the Middle East. We don't need to go to Breck for help. I know you'll think that I'm allowing my personal bias against Breck cloud my judgment on the matter, but I really believe that we are perfectly safe here and have enough security as is.

However, Secretary Cheney is assigning an Army officer, Captain Mendez, to oversee our current security force and act as a liaison between the Institute and the military in the future. Captain Mendez with also be in command of the underground rail link when it is completed.

This brings me to the good news. Secretary Cheney informed me that due to the on-going crisis the government has decided to accelerate the expansion of the underground facilities and completion of the rail link. As part of the expansion, they are adding a medical facility with state of the art equipment and a stasis chamber, similar to the ones on the early ANSA spacecraft. The goal is to have it all completed, including the new reactor by the end of the year.

Given that the research by Dr. McQueen and Dr. Cox has reached a plateau with our current reactor, this should greatly advance their work. Phase I should now be completed in the next two to three years. Work on Phase II can then begin ahead of schedule.

Also, Dr. McKay has informed me that he is working on a way to scan into the temporal vortex once it can be created. His initial research is very promising. If he is successful, we need not send Human subjects through the vortex. Doing that would be a great risk to their lives. It may not be possible for a human to survive a journey through the vortex; so I'm sure that you'll concur with me in giving McKay approval to continue his work.

Finally, Stacey and Donna are planning a shopping trip to Megalopolis for a few days next month, May 20th I think. I saw a flyer for that circus we saw in Georgia a few years ago with the horse riding chimpanzee. It is going to be at the Civic Dome Auditorium that weekend. Let's bring the kids up and join them for a family weekend. It should be fun!

Your friend,

Joseph Farrell

SIMIAN CONQUEST

Governor Seized In Revolt Of The Apes!

Governor Breck is dragged though the Civic Plaza after being captured by rebelling servant apes.

MEGALOPOLIS, May 21 - A mixed group of servant apes scheduled for intense re-conditioning escaped from their quarters at Ape Management and rioted throughout the city, taking Governor Breck and members of his staff prisoner.

The incident began shortly before midnight when the rebelling apes effected an escape and ran amok in the training facility, releasing all the apes quartered there and leaving Ape Management in the hands of the apes with most officials either killed or taken hostage. The main band of rioting apes then marched on the city finally reaching the Civic Plaza, storming the Governor's command center.

Talking Ape?

Earlier reports said the mob of revolting apes were led by a super-intelligent chimpanzee who had acquired the power of speech. Before his capture, the Governor's office issued a statement that the taking ape had been caught and executed. However, that statement is now being questioned by many.

Dr. Joseph Farrell of the Hasslein Institute of Temporal Physics speculated that it could be the child of the two talking Cornelius and Zira, who came to us from outer space 20 years ago. As such, he represents a threat to the future of the entire human race.

Rioting Spreads

Before the night was over the rioting among servant apes spread to both New York City and Philadelphia. There are also unconfirmed reports of similar ape revolts as far away as Chicago and Denver. However, these incidents were small and immediately put down by local police.

The city center of Megalopolis is still completely controlled by the apes. Security Chief Kolp, the highest ranking government official not killed or taken prisoner, has vowed to retake the city and free Governor Breck. Security forces are currently being gathered from all over the state, surrounding the city and preparing for their offensive.

Troops recalled

The President responded to the ape rebellion by recalling several military units from Western Europe, South Korea and Saudi Arabia, where allied troops are in a stand-off with Iraqi and Soviet forces. According to a spokesman the President is dedicated to restoring domestic stability and vows to put down this rebellion as quickly as possible.

OFFICE OF STATE SECURITY

ARTHUR KOLP
CHIEF OF STATE SECURITY

May 24th, 1991

Captain Steven Mendez
Hasslein Institute of Temporal Physics
281 Matthew Williams Drive
Windsor, NJ 08520

RE: Mrs. Buckley and Mrs. Farrell

Captain Mendez,

Sorry it took 2 days to reply to you but you can understand that my hands are very full at the moment with the current crises. I understand that the two Directors of the Hasslein Institute are frantic about the fate of their wives, who were unfortunately trapped in the city when the ape revolt broke out. However, there are hundreds of frantic husbands, wives, father, mothers and other family members who had relatives trapped here as well.

I appreciate the offer for you and your security detail from the Institute to join the forces preparing to liberate the city. With the outbreak of similar slave rebellions in other cities several divisions have been diverted to deal with those incidents so we need every man we can get. General Powell has assured me that more troops are being recalled from Saudi Arabia and West Germany to bolster domestic forces and should be here in a few days.

Right now the plan is to attack with the forces we have in 3 days time. We should have enough troops in place by then. You and your men will be a welcome addition. In the meantime, me and my Deputy, Neil Hoskins, are conducting small harassing attacks within the city with our remaining police forces. The goal of these hit and run raids is to gain intelligence and disrupt any ape defenses.

These attacks have been very effective so far. We have learned that Governor Breck is being held at the Warwick Hotel on the east side of the city. This is the same hotel you said both Mrs. Farrell and Mrs. Buckley were staying. We are planning an raid on the hotel for tomorrow night to free the Governor. If you and several of your men can make it here by then, you are welcome to join us. We try to keep these raids small and quick for obvious reasons. Plan on bringing at least 2 men with you but no more than 4 total.

Once we reach the hotel and breach its defenses, you and your men can search for the two women while my men free the Governor and the other members of his staff being held hostage. We are currently short on small arms so you and your men will have to bring your own.

After the raid, if we are successful or not, we'll be joining the main force preparing to liberate the city. We'll need your full detail for that attack. Any additional arms your detail can provide with be very helpful.

Looking forward to meeting you.

Sincerely,

Arthur Kolp

DATE: MAY 28, 1991 09:53 HOURS

TO: GENERAL COLIN POWELL, CHAIRMAN JOINT CHIEFS OF STAFF

FROM: BRIGADIER GENERAL GORDON STEWART

RE: OPERATION URBAN LIBERATION

ON MAY 27, 1991 US ARMY 23RD INFANTRY DIVISION AND 3RD ARMY TANK CORPS UNDER MY COMMAND WITH THE SUPPORT OF THE LOCAL MILITIA UNDER THE COMMAND OF STATE SECURITY CHIEF ARTHUR KOLP AND A SECURITY FORCE FROM THE HASSLEIN INSTITUTE UNDER THE COMMAND OF CAPTAIN STEVEN MENDEZ, USA, BEGAN OPERATIONS TO LIBERATE THE CITY OF MEGALOPOLIS FROM CONTROL OF REBELLING SIMIAN SERVANTS. THE OPERATION WAS A QUALIFIED SUCCESS.

THE 23RD INFANTRY AND 3RD ARMY TANK CORPS BEGAN THE OPERATIONS AT 23:17 HOURS ATTACKING DEFENSES ON THE EASTERN SECTOR OF THE CITY. THOSE DEFENSES WERE QUICKLY OVERWHELMED AND OUR TROOPS WERE ABLE TO ENTER THE CITY BY 01:00 HOURS ON MAY 28, 1991. WITHIN 3 HOURS LIBERATION FORCES WERE FLOODING INTO THE CITY. THE MAIN PLAZA OF THE CIVIC CENTER AND CITY COMMAND POST WERE SECURED BY THE LOCAL MILITIA FORCES AT 05:25 HOURS.

DURING THE MAIN ATTACK IN THE EASTERN SECTOR SIMIAN FORCES ATTACKED A HOLDING UNIT OF THE LOCAL MILITIA IN THE WESTERN SECTOR AT 00:35 HOURS. THE HOLDING UNIT WAS COMPLETELY OVERWHELMED WITHIN MINUTES BY THE SIMIANS. SEVERAL THOUSAND OF THE REBELLING SIMIANS WERE ABLE TO ESCAPE THE CITY THROUGH THIS BREECH IN THE WESTERN DEFENSES WHILE OUR MAIN FORCE WAS ATTACKING FROM THE EAST. IT WAS LATER DETERMINED THAT THE SIMIANS DEFENDING THE EASTERN SECTOR DID SO ALLOW THE OTHERS TO ESCAPE INTO THE WILDERNESS TO THE WEST OF THE CITY.

AT 06:50 HOURS THE ENTIRE CITY WAS SECURED AND MILITARY OPERATIONS CEASED, THE BREAKOUT WAS DISCOVERED AT THAT TIME. SEVERAL UNITS FROM THE 23RD INFANTRY WERE IMMEDIATELY ASSIGNED TO PURSUE THE FLEEING SIMIANS. SO FAR NO CONTACT HAS BEEN REPORTED BY THE PURSUING UNITS. MORE UNITS WILL BE ASSIGNED TO THE PURSUIT AS SOON AS IS POSSIBLE.

SECURITY CHIEF KOLP CONTENDS THAT THE BREAKOUT WAS PLANNED IN ADVANCE BY THE LEADER OF THE REBELLING SIMIANS, A CHIMPANZEE NAMED CAESAR. KOLP RESCUED GOVERNOR BRECK ON MAY 25, 1991. THE GOVERNOR IS CURRENTLY RECUPERATING AT A MILITARY HOSPITAL IN SOUTHERN NEW JERSEY. KOLP MAINTAINS THAT THE GOVERNOR TESTIFIED THAT THE CHIMPANZEE CAESAR SURVIVED THEIR ATTEMPT TO EXECUTE HIM AND IS THE CHILD OF THE EVOLVED APES CORNELIUS AND ZIRA. IF WHAT KOLP SAYS IS TRUE THE CURRENT SITUATION IS FAR MORE SERIOUS THAN OUR ORIGINAL ASSESSMENT. IT IS RECOMMENDED THAT THIS INFORMATION BY WITHHELD FROM ALL BUT THE PRESIDENT AS WELL AS THE ESCAPE OF SEVERAL THOUSAND REBELLIOUS APES INTO THE WILDERNESS UNTIL THEY CAN BE EITHER CAPTURED OR ELIMINATED.

HUMAN CASUALTIES DURING THE OPERATIONS WERE LIGHT: 427 KILLED, 1835 WOUNDED. SIMIAN CASUALTIES WERE MUCH HEAVIER: 2368 KILLED, 5869 WOUNDED.

A MORE DETAILED REPORT OF THE OPERATION WILL FOLLOW BY COURIER WITHIN 48 HOURS.

SOVIETS ATTACK ON MULTIPLE FRONTS

West Germany Invaded, Berlin Seized
Troops in Saudi Arabia Holding Line
North Korean Army Sweeps South

Map of Soviet Invasion; Tanks roll into West Germany

WASHINGTON, May 28 - Soviet troops and their allies have attacked U.S. and NATO forces on several fronts across the world. The first action began when the North Korean army began an artillery barrage on South Korean positions defending the 38th parallel. Soon North Korean troops were crossing the border in great numbers.

Four hours later, Iraqi and Soviet troops in Kuwait attacked NATO forces stationed in Saudi Arabia. The two armies had been in a stand-off for several months. So far, NATO forces are holding the line against the aggressors so it may be sometime before the deadlock there is broken.

The final action was the invasion of West Germany from East Germany and Czechoslovakia only two hours later. Twenty tank divisions, commanded by General Orlov, swept into West Germany with little resistance.

Experts believe the Soviet Union decided to take advantage of increasing chaos in the west caused by an increasing number of servant ape rebellions in U.S and western European cities. Several U.S. Army divisions had been pulled from both West Germany and Saudi Arabia to quell these revolts.

Two divisions that retook Megalopolis from ape rebels just yesterday are now being recalled from that city to deploy to either Europe or the Middle East. The President has ordered that all remaining military forces in the county be quickly sent to one of the fronts around the world. Local police will now have the job of putting down all ape rebellions at home.

HASSLEIN INSTITUTE OF TEMPORAL PHYSICS

WINDSOR, NEW JERSEY

INTERNAL MEMO

Date: May 29th, 1991

To: Dr. Daniel Buckley and Dr. Joseph Farrell

From: Steven Mendez, Captain, United States Army

RE: New Assignment

Dr. Buckley and Dr. Farrell,

First, allow me again to offer my condolences on the death of your wives. I deeply regret that the force I led into the Warwick Hotel did not reach them in time to save their lives. Unfortunately, when the main force stormed the building, one of the gas mains was ruptured flooding most of the floors with deadly gas. While Governor Breck was rescued, very few of the Human hostages held in the hotel survived. However, all the ape guards were killed in the raid.

I hope that this will give you some comfort but your wives died very quickly and peacefully. When my force reached their room, they were laying on their beds as if they had just drifted to sleep. State Security Chief Kolp has assured me that their bodies will be released to you in the next day or two for funeral and burial.

I can't imagine what you two men must be feeling right now having never been married, but I consider this the greatest failure of my military career.

While I have only been here at the Institute for little over a month, I have enjoyed my time here as your head of security. I consider you both great patriots doing important work for the future of our country. Unfortunately, due to the growing international and domestic crises, I have been informed that I'm being reassigned effective immediately. For security reasons I can't say where my new assignment will be, but it will be in one of the combat zones in either Europe or the Middle East.

One thing I can share is that the situation is far more dire than being disclosed in the press. Soviet troops have almost totally overrun West Germany. Our troops are falling back into France to make a stand there with the French and British armies. In Saudi Arabia our troops are holding the line but the pounding they are taking from the Soviets and Iraqis is taking a toll.

The main problem is that there are widespread ape revolts taking place behind the lines all over the globe. These revolts are undermining supply lines and other support functions for the troops. Right now these revolts are being downplayed as minor but they are far more violent and disruptive. You gentlemen made the right decision by not allowing servant apes here at the Institute.

Security here will need to be strengthened immediately. This is top secret but several thousand apes escaped from Megalopolis into the provinces. The army has no idea where they went and was recalled from the search due to the Soviet invasion. I have left plans for addition security measures for my successor.

Good luck gentlemen. I look forward to working with you again one day.

SENATE COMMITTEE FOR THE INVESTIGATION OF SIMIAN REBELLION

THE FOLLOWING IS A CLASSIFIED REPORT

PRESIDENT'S EYES ONLY

DATE: JUNE 2 1991

SUBJECT: STATEMENT BY CAPTAIN STEVEN MENDEZ, UNITED STATES ARMY

The following is a transcript of the closing statement made by Captain Mendez, US Army:

With all of the erroneous information regarding the liberation of Megalopolis, I feel it is my duty to report what actually happened when our forces entered Megalopolis on May 27th, 1991.

While it is true that we were able to secure the release of Governor Breck, he and several of his aides provided sworn statements as to their treatment by the apes, specifically the chimpanzee known as Caesar, providing me with a detailed report on his treatment-including torture by electrocution of his neural cells, which is banned under the law regarding the treatment of ape servants, and the deliberate effort by State Security Chief Kolp and his security forces to suppress the knowledge that Caesar and the other apes had gained sentience, which, aside from rebelling, might have qualified them for extra rights and even their freedom.

According to Breck, it was Caesar who stayed the hand of his own forces from killing Governor Breck and his former senior aide, now identified as MacDonald, who is believed to be still at large and with the apes. In Caesar's own words, it was his view that humanity should be led by compassion, should the apes ever take over as his own parents stated they did in their secret testimony before a Senate committee in 1973.

It is therefore my view that Kolp and Breck are themselves responsible for the breakdown of security through their mistreatment of the apes, and they should be held accountable. Whether they will be, of course, is up to the Administration.

If we as a country and as a people fail to free the apes as we would humans who had been held as slaves, it is my opinion that we, not they, will be responsible for our own fate, whether it happens tomorrow, or hundreds or even thousands of years from now.

Thank you, and God bless America.

END TRANSCRIPT

State of New Jersey
OFFICE OF THE GOVERNOR

JASON BRECK
GOVERNOR

July 13, 1992

President of the United States
The White House
1600 Pennsylvania Avenue
Washington, D.C. 20500

Mr. President,

Thank you for your kind note inquiring about my health. It has been a slow and painful course to recovery from my ordeal last year. I'm still not 100% but have been able to resume most of my former duties.

One of those duties, Chairman of the Governor's Association, is why I am writing you. The Association held its annual meeting this past weekend. I am happy to report that we have officially endorsed your decision to declare martial law and suspend this year's election. The country is in the middle of a foreign and domestic crisis, unlike any ever seen before in history. This is not the time to interject politics into the mix. While some Governors of the other party have objected to your decision, especially that windbag from Arkansas, most of the Governors believe you have done the right thing. Not even Lincoln and FDR had to face events like those we have endured in the past year.

The Association has also voted for more funding for local police and militia forces as well as a ban on servant apes. Ape rebellions are increasing around the country. Just large cities are no longer being affected as these revolts have spread to smaller towns in the provinces. More police are needed to put them down and our country purged of this enemy within. I have already eliminated all ape slaves from my state, several other Governors are doing so as well. While this requires the mass killings of thousands of apes, it is vital for our national security to do so. I hope you will support a national ban.

I also hope you will support the additional funding as well. In my state we need additional police to hunt down the apes that took over my capitol over a year ago. They and their leader, the talking ape Caesar, disappeared into the provinces when the army took back the city. Because of the war with the Soviets, those troops were sent to Europe and had to abandon the search for these apes. My local forces are currently spread thin maintaining order in our cities. It is imperative that we find the talking ape and kill him and all his followers. The future of mankind is at stake.

Finally, the news from the various war fronts has not been good of late. When I was in Congress there was a program named Project Gabriel's Horn that would develop the ultimate deterrent weapon. Funding for this program was stopped by Senator Moorehouse. The late Senator Hazeltine and myself urged President Reagan to reactivate the program using discretionary Defense funds but that money was used for the SDI program instead. I urge you to restart Gabriel's Horn now. Development of this weapon will ensure the survival of our country and ultimate victory over our enemies.

Thank you Mr. President.

Sincerely Yours,

Jason Breck

ASTRONAUTS REMEMBERED ON 25th ANNIVERSARY OF LAUNCH

President Dedicates New Memorial at NASA Headquarters in Houston

Left: The President dedicating the new memorial; Right: Astronauts Dodge, Taylor, Stewart and Landon.

HOUSTON January 15 - Speaking at a special ceremony honoring the memory of ANSA I astronauts Taylor, Landon, Dodge, and Stewart, the President unveiled a new memorial in their honor as twentieth–fifth anniversary of their historic launch was observed at NASA headquarters.

The President was eloquent in his praise of the lost astronauts: "While these brave pioneers failed in their original objective of creating a new pathway to the stars, their mission did help lead to new discoveries while expanding the frontiers of human knowledge."

The President has faced criticism over his declaration of martial law and suspension of elections five years ago while attempting to deal with both the ongoing war with the Soviets and the ape rebellion at home . His main critic the Governor of Arkansas has repeatedly condemned the administration's handling of the ape rebellion, even going so far as calling for negotiations with the intelligent apes believed to be still in hiding in the provinces outside of Megalopolis. However, Governor Jason Breck has been a keen defender of the President's actions stating, "this President has faced a both domestic and foreign crises greater ...

APE REBELLIONS REPORTED ACROSS EUROPE

LONDON January 15 - NATO officials reported today that Servant Ape revolts have been increasing throughout the major cities of Europe during the past few months further hampering the war effort against the Soviets. NATO spokesman, Colonel Jack O'Neill, did note that similar rebellions are also taking place in cities held by the enemy in Eastern Europe. The affect on the Soviets and their military of these revolts is current unknown. Additionally new steps were announced to put down any further ...

Continued on page 2

HASSLEIN INSTITUTE OF TEMPORAL PHYSICS

SUMMARY REPORT

DATE: 04/12/97	**REPORT ID:** 4156HRHR-5544FHRH	**PROJECT:** Temporal Vortex Project
PROJ. LEADER: Dr. David Cox	**PROJ. TEAM:** Dr. Moore, Dr. McQueen, Dr. Farrell	
CLASSIFICATION: Top Secret	**PROJ. LOCATION:** HITP Lab. #U3a	**DISTRIBUTION:** None

FINDINGS

Phase I of the project has been completed successfully. In 36 of 172 attempts a stable temporal vortex has been created.

The first successful attempt created a stable vortex of 0.045 centimeters for 0.0562 milliseconds. The 36th successful attempt created a vortex of 1.35 centimeters for a total of 0.68 seconds.

A total of 171 intermediate attempts were made adjusting the negative gravity field created by Dr. McQueen, of these, 136 attempts failed and 36 were successful. Of the final 25 attempts, 22 were successful. All of the last 8 attempts were completely successful.

Dr. McQueen has mastered the adjustments to the negative gravity field necessary to increase the size and time of the vortex. Dr. Moore and Dr. Farrell concur that this is possible based on their analysis of the data from the 36 successful attempts.

It is recommended that we proceed to Phase II of the project a soon as it is possible. However, based on our analysis of the date from Phase I; Phase II will require a much greater power source than is currently available to the Institute.

While the Institute's current reactor is only 4 years old, it is inadequate for the power requirements needed to successfully complete Phase II of the project. The attached analysis of the data from Phase I is irrefutable on this conclusion.

Professor Rockford has proposed a redesign of our current reactor that would increase its energy output tenfold. The proposed redesign will take only a few months to complete. With more and more government resources going to the war effort, it will be quicker to implement this redesign to our current reactor than to request funding for a new reactor from the government which would require an act of Congress.

Once the redesign is completed, Phase II of the project can begin. The goal will to extend the size and time of the vortex and to test if matter can pass through the vortex without being damaged. Once that Phase is completed we can proceed to Phase III, building of the Temporal Chamber.

During the final 6 successful attempts of Phase I, Dr. McKay tested his system to scan through the vortex. He did pick up several small fragments of radio signals in his attempts. The data suggests that these fragments come from the future. How far in the future is undetermined. Most of the fragments are unintelligible. Only one could be deciphered, 'Alpha-Omega'. Of course the meaning of that is unknown. Dr. McKay will be submitting a summary report of his finding separately.

The full detailed analysis report is attached.

THE JOINT COMMITTEE ON INTELLIGENCE

INTERNAL MEMORANDUM

June 12th, 1997

To: Members of the Joint Subcommittee on Intelligence, Science

From: Majority Committee Staff

Re: Project Gabriel's Horn & Hasslein Institute funding

I. Summary

On Wednesday, June 11th, at 2:00 p.m., the House and Senate Joint Subcommittee on Intelligence, Science held a closed hearing.

The meeting was chaired by Senator Jackson and Representative Marshal. In attendance were Senators Moorehouse, McCoy, Tennant and Lee; and Representatives Hartnell, Davison, Baker and Smith. Also in attendance was Major General Paul Oliver Duggan and Dr. Daniel Buckley of the Hasslein Institute.

The first item on the agenda was continued funding for Project Gabriel's Horn. The project was reactivated by a Presidential executive order seven years ago at the beginning of the war and funded directly from the President's discretionary fund. Major General Duggan testified that while the project is almost 90% complete, it needs greater funding to produce a prototype in the next three years. The Major General further testified with the war at a virtual deadlock on a five global fronts with thousands of casualties on both sides every month and increased ape revolts throughout the world; the need for Gabriel's Horn is greater than ever to break the deadlock. Senator Moorehouse voiced his objection to the project and to the President funding it in secret for the last seven years.

The second item was fund for the Hasslein Institute of Temporal Physics. Dr. Daniel Buckley testified to request increased funding for the Institute. He submitted reports showing the breakthroughs the Institute has made on their Temporal Vortex project. While the Institute has increased the yield to their existing reactor, Dr. Buckley requested funding for a new generation of reactor that would give the Institute an almost limitless power supply that will last several centuries and for an expansion of the Institute's underground facility.

II. Determination

The Committee voted 8 to 2 to approve the funding request for Project Gabriel's Horn.

The Committee voted 9 to 1 in favor the Hasslein Institute's funding proposal.

III. Attachments

A. Full transcript of the Subcommittee hearing.

Joseph Farrell

From: josephfarrell@hassleininstitute.edu
Sent: Wednesday, July 25, 2001 2:35 PM
To: Daniel Buckley [danielbuckley@hassleininstitute.edu]
Subject: New Reactor

Dan,

I'm happy to report that the new reactor will be fully functional by the end of next month. This will now give the Institute an almost unlimited power supply that will last centuries.

With the new reactor we can now start on Phase II of the Temporal Vortex experiment. The last test with our old reactor was able to create a stable vortex of 14.845 centimeters for 3 minutes 21.08 seconds. According to Dr. Cox, the increase in power that the new reactor will provide should help create a much larger vortex for a much longer time period. Dr. Cox is confident that we can complete Phase II within 3 to 5 years. We can then begin Phase III, the construction of the Temporal Chamber in the underground complex.

To that end, I think we need to step up funding of Dr. McKay's research. He has had success picking up radio fragments though the vortexes and he thinks he could pick up more. He is has started to design a small probe, no larger than a ping pong ball that can be sent through the vortex and do more than just scan for radio signals. It will take him a few years to complete the design and test prototypes which would coincide with the start of Phase IV, so we need to give him the funding now. I hope you agree.

As you requested I read the proposal from Dr. Theodore Haskins of the Oakland Science Institute and agree with you that we should fully support it. The way that the war has been going these past 10 years, not to mention ape rebellions across the world, our civilization could fall at any moment. Thankfully the leaders on both sides have restrained themselves from pushing the button. Dr. Haskins's proposal to create a series of vaults containing all our scientific knowledge in several cities throughout the world make a lot of sense. I fully support our contributing to these vaults and the proposal that one be located here in our underground facility. It must be one of the safest places in the entire world right now.

By the way speaking of the underground facility, now that the railway link is completed I think it is time that we finally ship the ANSA XII capsule back to NASA. It has been taking up storage space down there for almost 20 years now. I know that NASA has no use for the thing but neither do we.

Also, I think we should pass on going to the inauguration of the new Vice President. Although I didn't ever agree with the Vice President, his death while visiting the troops was a real tragedy. I still can't believe the President nominated his own son for the post or that Congress approved it. With the suspension of elections since the war began 10 years ago, the President is now setting up a generational dynasty for his family. Attending the ceremony would be taken as supporting this; thus we should not go.

Let's do something fun instead, let's take the kids to the movies this weekend. (Though it is hard to think of David and Christopher as kids anymore. They have grown into fine young men ready to start their last year at Princeton.) I'm a big fan of Tim Burton and his new film is coming out on Friday. I know it's a remake of a classic which is always a risk, but I'm sure Burton will do it justice. Let's all go on Saturday and then go someplace fun for dinner.

Sincerely,

Dr. Joseph Farrell
Director
Hasslein Institute of Temporal Physics

HASSLEIN INSTITUTE OF TEMPORAL PHYSICS

SUMMARY REPORT

DATE: 01/16/03	**REPORT ID:** 4564HTHT-4686KYST	**PROJECT:** Temporal Vortex
PROJ. LEADER: Dr. David Cox	**PROJ. TEAM:** Dr. Moore, Dr. McQueen, Dr. Farrell	
CLASSIFICATION: Top Secret	**PROJ. LOCATION:** HITP Lab. #U5	**DISTRIBUTION:** None

FINDINGS

Phase II has been completed successfully. The size and duration of the temporal vortex has been greatly increased in 109 out of 150 attempts.

The last 37 attempts were all 100% successful. In these 37 attempts a vortex measuring 3.735 CM was created and sustained for over 78 minutes.

In addition, in the final 13 attempts matter was safely passed through the vortex without any harm. For these experiments, small robots created by Dr. McKay were used. These tem-bots, as we've come to call them, were able to pass through the vortex and transmit back a signal. After this task was completed, the tem-bots successfully returned to the lab. Where and when the tem-bots traveled is still unknown. Dr. McKay is working on an upgrade with new sensors and the ability to transmit back audio and video signals through the vortex.

However, we still have no idea if living biological matter can survive a trip through the vortex. It is recommended that the Institute's moratorium on animal testing be suspended to conduct these experiments. They will be necessary if we hope to one day send Humans through the vortex.

If the moratorium is not lifted, it will be necessary to construct a special suit, similar to a space suit, that will allow a human being to safely pass through the vortex. Professor Montgomery has already begun to design a suit based on suits he helped design for NASA. The specifications for such a suit are attached.

Also, in all our experiments we have been unable to control or direct to where or when the vortex leads. In order to achieve two way travel to a specific date, a similar vortex would need to be created on the other side. There is no way to accomplish this with our current line of research and experiments.

It is therefore recommended that a cryogenic chamber be built in the Institute. There are several labs on the lower level of the underground complex that would be ideal for such a chamber. Once constructed several volunteers could be placed in cryogenic freeze up to several centuries. When they awaken they would then activate the temporal vortex linking it to our time. Then two way travel could result from now to then. Dr. McQueen estimates that such a chamber could be completed within five years. Designs and schematics are attached.

Now that Phase II is completed, work can begin on Phase III, the construction of the Temporal Chamber. Early estimates are that the chamber will take 7 to 10 years to construct barring any unforeseen delays. For Phase III, it is requested that Dr. Bechmann and Prof. Markovitz be added to the main project team.

The full detailed analysis report is attached.

HASSLEIN INSTITUTE OF TEMPORAL PHYSICS

WINDSOR, NEW JERSEY

March 4th, 2003

President of the United States
The White House
1600 Pennsylvania Avenue
Washington, D.C. 20500

Mr. President,

We are writing you at the recommendation of Governor Breck. Over 20 years ago the ANSA program was canceled due to the loss of the ANSA IX mission. At that time the ANSA XII spacecraft was being retro-fitted with the same temporal space drive as the ANSA IX. Because of the cancelation of the program, the ANSA XII craft has languished in the storage area of our underground facility. We have made repeated requests to NASA to arrange for the spacecraft be moved to either the Houston or Florida space centers, but always hit a wall of bureaucracy or indifference. However, we are not writing now to complain about this, but rather to propose a new mission for this spacecraft that might save our civilization.

For the past 12 years this country and its allies has been locked in a global war of attrition. In many of the major cities of the world slave ape rebellions have been growing for almost as long. We like many other scientists have become concerned that our entire civilization may soon fall. To that end we have built vaults in cities throughout the world that house all our scientific knowledge. One has been recently completed here in our underground facility. But that is not the reason we are writing you.

Because the current global situation is so dire, we propose using the ANSA XII for a mission that has been the ultimate objective of this Institute since it was founded. The ape-o-nauts Cornelius and Zira testified that they witnessed the destruction of the Earth from space. As we and many other Temporal Physicists will attest, it was the shock wave of that event that created a time warp that propelled the evolved apes into the past. Their arrival in 1973 set in motion a series of events that created the current global situation and will ultimately lead to the destruction of the Earth in approximately 2,000 years time.

Since the cancelation of the ANSA program, we here at the Institute have been trying to create a temporal vortex in order to travel to the future and prevent the destruction of the Earth. While our studies and experiments have been successful, it will take several more years to complete them, years the world may not have.

Therefore, we propose sending the ANSA XII into the future for this mission. We believe that the temporal drive installed on the craft will make it possible for it to travel into the future. Several of our personal, including Dr. Buckley's daughter, have already volunteered to go on the mission. We have consulted officials at NASA and they have the capability of launching the craft within the next 6 months. All we need is your approval and funding to set the process in motion. With the fate of the world in the balance, we urge you to approve this mission.

Respectfully,

Joseph Farrell Daniel Buckley

Directors, Hasslein Institute of Temporal Physics

EXECUTIVE ORDER 301826B

MAY 19, 2003

By the authority vested in me as President by the Constitution and the laws of the United States of America, and in order to ensure the future survival of the Earth, I hereby order as follows:

Section 1. Policy. Considering the current global conflict it has become evident that human civilization is in danger of destroying itself. If that happens it is feared that the prediction of the evolved apes from the future regarding the ultimate destruction of the planet earth in 2,000 years time will come to pass. It has been the policy of this and previous administrations to prevent that future event from happening.

Section 2. Implementation. Until now it was only possible to shape current events and hope that they will influence the future. However, the Hasslein Institute of Temporal Physics has found a way to directly influence and change future events, the Temporal drive system.

Within the next six months NASA will launch the last ANSA spacecraft into Earth orbit. (The Hasslein Institute has already installed the Temporal drive in this ship.) When in orbit the ship will engage the Temporal drive and travel to the year 3955. Once the ship has reached that year it will land back on Earth. The coordinates for the landing will be taken from the flight data recorder of the ANSA I spacecraft. The objective will be to land with a few miles of where the ANSA I landed (or will land) and will be re-launched by the Ape-O-nauts.

After the landing the crew of the ship will disembark to take any and all action necessary to prevent the destruction of Earth. To this end the crew will be outfitted special equipment and weapons to help accomplish their mission objective. The crew of this mission will be made up of three astronauts to be designated by NASA and a team of three specialists from the Hasslein Institute.

This mission is classified as Ultra Top Secret. All access is to be restricted to key members of the Executive branch and only those personnel at NASA and the Hasslein Institute directly involved.

Section 3. Funding. According to NASA estimates, the cost of this mission will be $48 Million. There is currently $50 Million remaining in NASA's budget for this fiscal year. However, at least $30 Million of that is required for existing NASA programs. Due to the covert nature of this mission, Congressional funding cannot be sought.

NASA can discretely use $15 Million of it's budget for this mission. The remaining $33 Million will be funded from the President's discretionary budget, specifically from the $200 Million earmarked for Project Gabriel.

RE: Mission Objectives and Crew Assignments

Dr. Buckley,

Pursuant to the President's Executive Order, the launch of the modified ANSA spacecraft has been scheduled for October 30th. The timing is a tight but we are confident that we can make the launch date.

To that end, the Hasslein Institute needs to deliver the modified ANSA ship to the Kennedy Space Center no later than the 15th of August. The booster stages of the launch vehicle are already being stacked in the vehicle assembly building. We need at least two months to properly test and stack the ship on top of the boosters before launch.

As stated in the Executive Order, the goal of the mission is to send the ship and its crew almost 2,000 years into the future to prevent the destruction of Earth as foretold by Cornelius and Zira, the evolved apes from the future. This is a very broad objective. Thus, it is requested that the Hasslein Institute develop detailed mission brief for our Astronauts to follow. I realize that most of the ground work will be done by your team, but the Astronauts need to know this information in order to give the best assistance possible.

In terms of crew assignments, we will need your recommendations for the Hasslein team by end of this month as they will need to be evaluated and trained starting next month. For this please designate both a primary and back-up crew for the mission.

The primary NASA crew has been selected. These are three of our most skilled Astronauts.

- Bill Hudson — Flew over 20 Space Shuttle missions, Commander of 6 of those flights
- Judy Franklin — Air Force pilot, has flown on 7 Shuttle missions
- Jeff Allen — Veteran of 8 Space Shuttle missions

I can send detailed dossiers on each of these Astronauts if you so request. However, I think you'll find their records outstanding and a great support for your teams.

Please let me know if there is anything else that the Hasslein Institute will need from NASA to make this mission a success. Give my regards to your college Dr. Farrell. I hope he is in good health.

Sincerely,

Hank Thomas

Hank Thomas
Director National Aeronautics and Space Administration

Subject: Mission Objectives and Crew Assignments

Joseph,

I've been thinking about NASA's request to us last week. As we discussed, the mission objectives should remain simple and straight forward for the team.

1. Launch vehicle and achieve a high Earth orbit of 20,000 miles.
2. Activate the ship's temporal drive once high Earth orbit has been achieved and travel to November 18th, 3955. (This is five days prior to the ANSA I being re-launched according to the ship's flight recorder.)
3. Locate homing beacon from the ANSA I (and if possible the ANSA II) vehicles which should be on the surface of the planet.
4. Land on the surface within 5 miles of the beacon. Note: If unable to locate beacon land in target area 1 which is believed to be the New York tri-state area.
5. Upon landing the team from the Institute will disembark, avoiding all populated areas, and survey a 30 mile area around the ship.
6. After the initial survey is completed, the team leader will designate a course of action to investigate the source of Earth's destruction and prevent this event from talking place.
7. Once objective number 6 has been achieved, the Hasslein Institute team and the NASA flight crew will proceed to the current location of the Institute and attempt to gain access to the underground facility, specifically to enter the Temporal Vortex chamber and activate it for the return trip to our century.

The objectives 5 & 6 are rather vague but the conditions our team will encounter on the ground are a very big unknown. Our team leader will need maximum flexibility when they arrive to complete their mission. Objective 7 is also a huge question mark. It relies totally on our efforts to make the Temporal Vortex work. Dr. Cox has assured me that it can be done in the next five to ten years. He claims that it will be necessary to have a working chamber at each end of the vortex. Thus, they will only be able to travel back once the chamber at our end is finished. I've informed our team of this and they are still willing to go knowing that when they return it may be five, ten or even twenty years later. As one said, they has all assumed it was a one way trip, so they were happy that there is some hope of returning. Dr. Cox also informed me that once the vortex is opened in the 40th century we will be able to travel back and forth at will for research purposes. I don't know if that is something we want to pursue right now but we should discuss it further.

I hope you read the dossiers of the flight crew proposed by NASA. I've reviewed them and Hudson, Franklin and Allen seem like an exceptional fight crew. Let me know if you agree.

As far as our team, over a dozen of our personnel have volunteered. Since we can send only three, I've narrowed the team down to:

- Team Leader: Frank Dominic - He's a gifted scientist and a former Navy Seal, perfect for the needs of the mission.
- Team Specialist: Dave Roche - Also former military and has been working closely with Dr. Cox. He will be needed to reactivate the chamber in the 40th century.
- Team Specialist: Josie Buckley - She knows Cornelius and Zira's testimony better than anyone. That will be key in finding and preventing whatever caused the destruction of Earth.

Let me know your thoughts.

Dr. Daniel Buckley

Subject: Happy Halloween

Joseph,

Greetings from Florida! I'm happy to report that last night's launch of the modified ANSA spacecraft was a complete success. I know you wanted to be here for it and since it was top secret there was no TV coverage but I did shoot video of it and will show it to you when I get back next week. I have attached a photo of the rocket taken shortly before yesterday's launch.

So far the craft has achieved stage 1 of their mission objectives and achieved a high Earth orbit of 20,000 miles. They are now on the countdown to activate the temporal drive and travel to the year 3955. Then the rest is in God's hands.

I must say that I have mixed feelings sending my own daughter to this dangerous mission. We were able to see each other briefly last night and was able to wish her good luck. I refused to say goodbye because I know that I will see her again.

Unfortunately we will not know of their success until we complete the Temporal Vortex chamber. The Vice President was here and I pressed him for more funding to finish the chamber in the next five years. He said he would speak to his father, the President, about it.

While we spoke he brought up a project I had never heard about before, something called Gabriel's Horn. He wouldn't discuss what the project is, but said it was of vital importance to winning the war. He did say that they were half way to completing a prototype to be followed by the main unit. He said once it is done, it will need to be transported via the secret railway under the Institute. And it may need to be stored there in secret for a time. He wants our cooperation in this. I assured him that we would give our full support.

Accompanying the Vice President was an old friend, Captain Mendez. He is a Colonel now and the Veep's liaison on the this secret project. He told me that it would take another several years for the main unit to be completed and by then the war could be over so it may never have to stored at the Institute. Even if it does, he will personally oversee the operation to protect the Institute.

I am a bit confused and concerned by what Col. Mendez had to say. I wonder what is this Gabriel's Horn project. It sounds very dangerous.

Update: We have just gotten word that the temporal drive has activated and the ship has successfully entered the vortex. Now all we can do it wait.

See you on Monday.

Dr. Daniel Buckley
Director, Hasslein Institute of Temporal Physics

WASHINGTON PEACE CONFERENCE BEGINS

Delegates convene first session of peace conference. Inset: President welcomes world leaders to Washington.

WASHINGTON, August 15 - The President's long awaited peace conference began today in Washington D.C. The opening session convened at 11AM EST and included over a dozen world leaders from every side of the conflict. One notable absence was Iraqi leader Saddam Hussein, although the dictator did send a delegation headed by his deputy prime minister Tariq Aziz.

The first session of the conference was taken up mostly by speeches from the attending world leaders. In his speech the President said, "We must find a peaceful resolution to end the conflict that has engulfed our world for the past 14 years". British Prime Minister Tony Blair echoed this saying, "If our civilization is to survive this century, we must find a peaceful way to resolve conflicts rather than resorting to military action".

The peace conference has been a dream of the President's for many years although many in his administration, including the Vice President, have voiced opposition to it. These hawks led by Secretary Dick...

SERVANT APE REVOLTS ON THE RISE AROUND THE WORLD

LONDON, August 15 - Rebellions by servant ape populations around the world have been increasing in recent months. Cites such as London, Beijing, Los Angeles, Sydney, Tokyo and even Moscow have suffered a significant loss of Human life and destruction of property. Why these revolts seem to be growing has many officials dumbfounded.

The very first ape rebellion took place here in Megalopolis 14 years ago. The group of apes, rumored to be led by a talking chimpanzee disappeared into the wilderness shortly thereafter and were never heard from again. Since that incident, attacks by servant apes have been sporadic and confined to only a few cities in North America. But in the last year...

RE: Project Gabriel's Horn

Mr. President,

I am happy to report that the prototype device is now complete. As our scientific team will testify, constriction of the prototype has resolved all technical and engineering issues and that work can now begin on building the full device. That process will begin as soon as we receive your personal authorization. The team is confidant that the full device can be completed in six months.

While the prototype will be used as a guide or map in the construction of the full device, a question has arisen on what to do with it after the full device is completed. So far, there seems to be three camps of opinion among our team.

The first camp wants the prototype deconstructed. They feel it is too dangerous to keep around and will be redundant once to full device is built.

The second camp thinks the prototype should be stored away for future study. They make the case that it is a historic scientific and technical achievement that should be available to future generations.

The third camp (which I and most of the military agree with) is that the prototype should be used to demonstrate the power of the full device to our enemies. Otherwise, they may think that our claims of the power of the full device are a bluff. Exactly how or where such a demonstration could be done is still an issue. However, I'm sure the scientists and engineers can come up with an adequate scenario to accomplish this goal.

Of course it is your decision on which option to proceed with once the full device is completed.

Finally, while the project has gone under the code name 'Gabriel's Horn' since its inception back in the 1970s, the full device will need a military designation when it is completed. In the past, such devices have been assigned a series number. In this case the number would be MXX-101. However, many on the team feel that such a pedestrian designation does will not do justice to the power of the full device. After speaking with members of the military, engineering and scientific teams we would like to, with your permission, designate the completed device using the Greek letters 'Alpha and Omega'.

Respectfully,

George S. Hammond

General George S. Hammond, USAF

Subject: Status

Daniel,

I just wanted to review the current status of the Institute's ongoing projects with you.

- **Temporal Vortex Experiments**: Dr. Cox reports that all recent experiments have been a complete success. He and his team have been able to increase the size and duration of the vortex considerably. However, Dr. Cox feels that any further experiments should be suspended until the Temporal Chamber is completed. I don't agree on this since that would mean a suspension of several years.

- **Temporal Chamber Construction**: So far we are over a year ahead of schedule. All materials needed for construction have been delivered to the underground storage facility. So even if there are any shortages if the war drags on, there will be no problem completing it.

- **Tem-bots Project**: Dr. McKay is reporting progress but is behind schedule. He has been having some problems with the software as well as some hardware stability issues. I recommend that Dr. Alexandra Moore be assigned to assist McKay. She should be able to come at the project with a fresh perspective. Let me know if you concur.

- **Vortex Suit Project**: Unfortunately nothing good to report here. Professor Montgomery (who designed several space suits for NASA) has been unable to obtain the necessary materials, due to war storages and priorities, to design and complete a satisfactory suit. He recommends suspending the project for the time being until these materials can become available again. I agree. What do you think?

- **Hibernation Chamber Construction**: As with the Temporal Chamber, construction is way ahead of schedule and all materials needed for completion are in the storage facility. While the Hibernation Chamber is only a back-up plan, we should prioritize it's completion. Professor Martel assures me it can be done in the next 2 years.

- **Infirmary Upgrade**: Also ahead of schedule. It will include all the state of the art equipment, including a full body dermal regenerator. When completed, our infirmary will be on par with the best hospitals in the country.

- **Data Vault**: Construction completed. Dr. Haskins from the Oakland Science Institute has inspected the vault and approved it. I've assigned David and Christopher (or maybe I should say Drs. Buckley and Farrell) to supervise the uploading of all the data. They just returned from Oakland (where the Vault has been placed under a railway station) and observed the procedures used there, so they are the best to ensure that all goes to plan. They said that it can be done by the end of the month.

Finally, I've gotten a request from the Office of the Vice President. They've requested that all Institute personnel be withdrawn from the underground railway station for a period of 3 days as of the 2nd of next month. They would not say why other than that it was ultra-top secret. I wonder of this has to do with Project Gabriel's Horn that the VP and Col. Mendez mention to me a few years back. Whatever it is we have to comply.

Take care,

Dr. Joseph Farrell
Director, Hasslein Institute of Temporal Physics

REBEL APES ATTACK PEACE CONFERENCE

President, Many Delegates Killed

VICE PRESIDENT TAKES OATH OF OFFICE

Security Forces responding to simian attack. Inset: Some of the rebel apes that attacked Conference

WASHINGTON, May 24 - A group of rebelling servant apes attacked the worldwide Peace Conference in Washington, D.C. killing the President of the United States and many others. Delegates from China, Soviet Union, Israel, Jordan, France, Japan and several other countries were also killed.

The Peace Conference was making great strides since being convened last August. Many believed a comprehensive Peace Treaty ending the 15 year world war was only a few weeks away. Because of the progress being made, the President has been attending sessions during the last several weeks and why he was there yesterday when the apes attacked.

It was about 2PM, just as the afternoon session was gaveled to order, that the rebel apes attacked the conference. Despite heavy security at the conference site, the apes overwhelmed the force by shear numbers. It is estimated that over 300 apes participated in the attack. Once past the security guards, the apes streamed into the conference hall at will. Armed with automatic rifles and explosives, the apes began murdering the delegates. The Secret Service tried to get the President out of the hall but all exits had been blocked by the apes. They then formed a circle to defend the President, but all were killed. The apes then executed the President along with several other delegates, lining them up against one wall and shooting them firing squad style.

Additional Security Forces were soon mobilized and counter-attacked. Many of the apes were killed in this attack but most fled the site and escaped into the provinces, where they presumably came from. The army is still pursuing them into the wilderness.

When the President was confirmed dead at Walter Reed Army Medical Center, the Chief Justice of the Supreme Court was summoned to the White House. In a private ceremony the Vice President, the late President's son, took Presidential Oath of Office in the Oval Office surrounded by his family and a few...

To: All Staff
Subject: President's Speech Tonight

As all of you know, the new President is going to deliver a major speech tonight regarding the war. Unfortunately, the hopes of those of us who desired a peaceful end to this war which has dragged on for 15 years were dashed two weeks ago when revolting servant apes attacked the peace conference in Washington, murdering the old President. Many of us protested when the new President shut down the conference after that incident. We still believe that there is hope for a peaceful resolution. Dr. Farrell and I sent an official letter to both the new President and to Governor Breck urging that the peace conference be reconvened. Dr. Farrell and his wife Stacey right now are on their way to the state capitol to plead with the Governor to use his influence with the President on this issue.

However, we must face the new reality that the war may drag on for many years to come. To that end, I am happy to report that all of the Institute's projects are on or ahead of schedule. While the Temporal Chamber may take up to 10 years to complete, all the necessary materials are in our storage facility. Thus, even if there are shortages due to the continuation of the war; there will be no problem completing this project.

There have many rumors and speculation in the media about what the President is going to say in his speech tonight. Many hope that he will offer to end the war and focus on the human race uniting to put down slave-ape revolts which have become a global problem in recent months; however, this is most likely not the case. While simian rebellions have increased worldwide, they are on the decline in this country and most have never risen above the level of a large riot. Despite the recent attack in Washington, most of our leaders seem to think this problem is a nuisance at best. Even Governor Breck who was taken prisoner and almost killed in the very first ape revolt 15 years ago no longer thinks it is a serious problem. While that group of apes disappeared into the wilderness shortly after their riot, the Governor thinks that they must have died out there and are not still in hiding.

What is more likely is that the President will be announcing a new offensive against Russia and Iraq with the hope of a decisive victory to end the war. Most of my and Dr. Farrell's contacts in the government seem to confirm this scenario. A few have suggested that the President plans to unveil the existence of a new super weapon that will force the other side to surrender. We believe this may be true.

Last week our underground railroad was made off-limits to all Institute personnel, including Dr. Farrell and myself. The operation was supervised by Colonel Mendez, who served here as Head of Security many years ago. We think that this super weapon was being transported to the state capitol at that time. While we have no confirmation of that, it is the only logical conclusion Dr. Farrell and I can come to in light of all the available facts and a conversation I had with Col. Mendez a few years ago. Unfortunately, we have no idea what this super weapon is or if it will be effective in ending the war. We will all just have to wait until the President's speech tonight.

To that end, I am ordering that all staff report to the underground facility as of 7PM tonight. Those of you who wish to bring along family members are welcome to do so. There are living quarters down there for a few hundred people so there should be no problem in accommodating everyone. Additionally, all current projects should be moved to the underground labs immediately. Most are housed there already so again there should be no problem. After 7PM all the doors to the surface will be sealed. This is just a precaution so there is no need to panic. All senior staff are invited to watch the speech in the main conference room with me. Unfortunately, Dr. Farrell and his wife will still be in the state capitol and unable to join us.

Thank you,

Dr. Daniel Buckley
Director, Hasslein Institute of Temporal Physics

PRESIDENT ISSUES NUCLEAR ULTIMATUM

Demands USSR & Iraq Surrender

DEMONSTRATES NEW WEAPON ON THE MOON

Left: Result of Alpha-Omega prototype on the Moon. Right: President in Oval Office during address

WASHINGTON, June 5 - The President of the United States addressed the nation and the world tonight issuing an ultimatum to our enemies in the 15 year long world war to surrender immediately. During the address the President announced the creation of a new ultimate weapon the Alpha-Omega bomb, a nuclear device with a cobalt casing capable of destroying the entire Soviet Union. To demonstrate the destructive power of this new weapon, the prototype was exploded on the surface of the Moon during the President's address.

The President set a deadline of 6PM GMT (1PM local time) today for the USSR, Iraq and their allies to unconditionally surrender to the United States. So far there has been no response from Iraqi leader Saddam Hussian or Soviet Chairman Vladimir Putin. However, several allied leaders, including Prime Minister Tony Blair of the UK and Angela Merkel of Germany, have issued statements praising the President for taking decisive action to end the war now.

Many peace activists and scientists were quick to denounce the President's actions. Senator Sanders said, "the President should have followed his father's example and reached out to our enemies with the hand of peace". Dr. Joseph Farrell of the Hasslein Institute called the President irresponsible, noting that the detonation of prototype on the Moon could have lasting ecological impact on the Earth. Dr. Farrell plans on meeting with Governor Breck here today to discuss this and other issues.

There are still very few details about the Alpha-Omega bomb. Administration and Defense Department officials have refused to comment on the basis of national security. The Pentagon will hold a special briefing today to outline the history and development of the new weapon but no technical details will be shared. Additionally, current location of the full weapon remains top secret.

The President's hard-line stance is no surprise to anyone. He was member of a hawkish faction in his father's administration led by Defense Secretary Dick...

Subject: What we know so far

Yesterday was not a good day. We all know that. Thankfully, we were still on lockdown here in the underground facility when the alert came through; so we have survived the worst event in human history.

As to what exactly happened, we can only speculate since all communications have been knocked out. From the reports gathered before the attack, it seems that Russia and its allies decided to launch a full nuclear attack on the U.S. and our allies as a response to the President's ultimatum. Their aim was to destroy the Alpha-Omega bomb before it could be used on them. So far it seems that they have succeeded. While the U.S. launched a full retaliatory strike against them; there is no indication that the Alpha-Omega device was used. It's present whereabouts are still unknown.

We have access to several surveillance satellites in orbit that are still functioning. What we have seen is not good. It appears that every major city in the world has been destroyed, including New York, Philadelphia and our state capitol. While the Institute and the surrounding area was not attacked, ambient radiation levels are far too high for anyone to venture out of our bunker for at least two years.

There are other areas across the globe that appear to have been unaffected. Most closely to us there is a region to the north (west of New York City) that looks totally unscathed. It seems to be mostly wildness and farmland. Also most of the southwest region of the country looks to have survived despite all of the major cities there being destroyed. The Soviet's nuclear attack was mainly concentrated on the eastern half of the United States.

Dr. Christopher Farrell and his team have done a preliminary survey of the tunnels of the underground railways system. The news is not good. All the tunnels to the south have collapsed and destroyed. There is no chance of restoring them so all access to Philadelphia and Washington D.C. is permanently cut off. The tunnels to the north that link with the state capitol and New York have survived and are intact. However, Dr. Farrell's team sent a probe up the tracks and the radiation levels are so high in the tunnels between here and both cities that it would be impossible for anyone to survive the journey even with our strongest shielding. Dr. Farrell estimates that will take at least 500 years for the radiation to dissipate and allow safe passage.

So we are at present cut off from the rest of the world at the moment. That's the bad news. The good news is that we have enough power from our reactor to last for centuries. There is enough food and fresh water stored for over a century. Plus we have all the materials we need to continue and complete our work. And now it is more important than ever that we complete the work we've started on all our projects. We are the only hope left for all mankind.

One final note, my co-director, colleague and friend; Dr. Joseph Farrell and his wife have not been heard from since the early yesterday morning. They were scheduled to meet with Governor Breck in the state capitol at the time the alert was sent. We can only hope that since they were with the Governor that they survived with him. I have no doubt that Breck has survived. He once bragged to me that underground sections of his city could survive a ten megaton over blast. So while I am sure that they are still alive; unfortunately, we will never be able to see them again. My sympathies to his son Christopher, who has grown into a fine scientist like his father.

All I will say about my friend Joe is that he was one of the most intelligent scientists I have ever worked with and a good friend. This Institute was his vision and now we must all honor that vision by finishing our work. Stay strong.

Dr. Daniel Buckley
Director, Hasslein Institute of Temporal Physics

HASSLEIN INSTITUTE OF TEMPORAL PHYSICS

STATUS REPORT

DATE: 07/01/06	**REPORT ID:** 4156GHYR-4925BRIO	**DEPARTMENT:** Communications Center
DEPT. HEAD: Walter Harriman	**CLASSIFICATION:** Top Secret	**DISTRIBUTION:** Dr. Buckley

SUMMARY

A full analysis of the Institute's Communications system has been conducted. The results are as follows:

1. The Institute's transmitter array is completely non-functional. Whether it is due to physical damage to the array or due to interference caused by radiation or other atmospheric phenomena is unknown. It is currently impossible to inspect the array which is located outside the underground bunker to determine the cause. Either way the result is the same, it is currently impossible for us to communicate with any survivors in the outside world.

   a. It is recommended that examination and possible repair of the array be the top priority of the first team to venture outside the bunker as soon as it is possible to do so.

2. The Institute's receiver is also damaged but to a lesser extent. The satellite link is still functional. However, the range of audio/video ground transmissions is severely limited. In short, we can only receive transmissions from approximately a 500 mile radius of the institute and only those using a highly powered transmitter.

   a. Recommend that power resources be rerouted to help boost our receiving capabilities.

   b. As with the transmitter array, it is recommended that repairs to the receiver be a top priority when it is possible to venture outside.

3. As ordered, we have been monitoring all channels on a round the clock basis to gather any and all information possible. So far we have received only 285 transmissions. Almost all have been from individuals using CB or short wave transmitters calling for help. These were most active during the first week after the attack but almost all have now gone silent. However, three of these transmissions all received in the first 48 hours of the attack are of high interest:

   a. News report from a Radio station outside of Philadelphia 18 hours after the attack stating that the retaliatory strike has been successful and all major cities in the USSR and its allies have been destroyed.

   b. Mayday transmission from Air Force One stating that it had been hit by a missile en route to the Presidential bunker in South Dakota and was crashing.

   c. A status report from the state capitol 45 hours after the attack stating that Governor Breck and his party had been killed and that Security Chief Kolp has assumed the position of Governor.

A full detailed report is attached.

From: Dr. Daniel Buckley

Re: New project

Dr. Moore,

Please forgive me for not using the Institute's email system but this is a delicate matter so I decided to go old school with this note to you. Because you have proven yourself to be the best and the brightest of our second generation of scientists, I felt it best to assign this task to you.

Shortly after the alert was issued on June 6th, the Pentagon sent a flash transmission to all facilities in the U.S. that were part of Oakland Science Institute archive project. According to the alert, this flash transmission contains thousands of digital documents to be stored in the data vault. I personally have this transmission on a special 10GB hard drive and have tried to access it several times. So far my efforts have been unsuccessful. The flash transmission was highly encrypted. I assume this was done to keep the documents secret. However, given the nature of our work here, it is key that we be able to access these documents, particularly anything to do with this Alpha-Omega bomb.

The hard drive is in the safe in my office. I will give to you if you accept this assignment. I want you to quietly put together a team to crack the encryption on the drive. I believe there are several on our staff who have shown an aptitude in this area including Dr. Farrell's son, Christopher. Once you and your team have access to the documents, review with a special focus on all documents relating to the Institute and the Alpha-Omega bomb as well as anything to do with Cornelius and Zira, the evolved apes from the future. Of course, everything that you discover will have to remain strictly confidential.

I have another request. Since the nuclear attack I have been running the Institute on my own. All these years I had Dr. Farrell to share the burden with me. Now it has completely fallen on me. To quote one of my favorite movies, I'm getting to old for this. Therefore, I would like to offer you the position of Deputy Director of the Institute. I know that you will be leapfrogging over several more senior staff members but most of them are old scientists like me. The Institute needs someone young like you who will be able to take over if something should happen to me.

I know I am asking a lot of you but I am confident that you are up to the challenge. You do not need to answer me right away. Take a few days to think about both requests before you give me your answer.

Please come to my office if you wish to discuss.

Yours Truly,

Daniel Buckley

cc: Alexandra Moore [alexandramoore@hassleininstitute.edu]
Subject: Outside conditions

Dr. Buckley,

As you directed, we have been monitoring outside radiation levels and conditions as best we can with our limited equipment. As you know, only a few meteorological sensors are still working. All cameras and the more sophisticated equipment were rendered inoperable by high radiation levels following the nuclear attack.

The good news is that conditions outside our bunker are improving. The heavy rain storms and high winds seem to have subsided over the past few months.

Also, it seems that the high radiation levels are dropping at much quicker rate than we had anticipated. Our original estimate was that it would take several years before it was possible to venture outside our bunker. Now we believe that it may be only a matter of a few months until the levels are low enough to be acceptable with the right equipment.

I've spoken with Professor Montgomery and he thinks that he can adapt the Vortex Suits for outside conditions. While that project was abandoned due to material storages, Professor Montgomery is confident that these suits can be repurposed with our current supplies. Since the suits were originally designed to protect against a much hasher environment, they should do an adequate job protecting against outside radiation. Professor Montgomery says if he starts now he should be able to have 3 or 4 suits properly retro-fitted in about 6 months. If you approve, we can start working on the suits immediately.

Dr. McKay has made a proposal to test his Tem-bots by sending them out of the bunker before we send any people. We can't send any out now. Their circuits would be fried at the current radiation levels. But once those levels drop in few months, Dr. McKay thinks the bots should be able to do a complete survey of the area outside our bunker. This might be a prudent move before we send any people out.

When we can send a team outside, Dr. Leavitt would like us to test the new comms system set up and the speech to text software her team has developing as part of the Temporal Vortex project. The software is very exciting in that it will instantly give us a written and data record of any excursion.

Dr. McKay would like to link the Tem-bots into the comms system and software. He said it would give the excursion team direct control of all bots nearby and allow for the bots to report their data directly into the written record as well as all data directly into the Institute's computers.

As to the first excursion outside, we will need to select a team as well as what their immediate goals will be. With regard to the team, I'll leave the selection to you and Dr. Moore, but I would like to volunteer for the first team. Please keep that in mind when making your decision. In terms of the goals, after speaking with several department heads, the priority should be an assessment of the damage to the Institute buildings and the repair of our communications array in order to contact any other survivors, especially those that are nearby. Of course, this is your decision to make.

Please let me know if you wish to discuss further.

Sincerely,

Julie Franks
Operations Manager

HASSLEIN INSTITUTE OF TEMPORAL PHYSICS

SUMMARY REPORT

DATE: 12/08/07	**REPORT ID:** 4568JERT-5689EYOU	**PROJECT:** Tem-Bot Survey
PROJ. LEADER: Dr. McKay	**PROJ. TEAM:** Dr. Quinn, Dr. Kiley	
CLASSIFICATION: Confidential	**PROJ. LOCATION:** HITP Lab. #U17	**DISTRIBUTION:** Dr. Moore

FINDINGS

As of 12/05/07 radiation levels outside the underground facility had fallen to a low enough level for Tem-Bots to function safely without their chips being incapacitated. It is still unsafe for humans to survive at the current levels, even with protective suits, so it was determined to have Tem-Bots conduct an initial survey of the immediate area outside of our facility.

Seven Tem-Bots were released through adjunct entrance 7A on 12/07/07 and remained outside for a total of 3 hours and 27 minutes. Dr. Kay recalled the Tem-Bots after a circuit in one of the bots became unresponsive. Examination of the circuit after the bot returned to the lab reveled that the prolonged exposure to the high radiation levels outside the facility had rendered it inoperative.

Initial survey by the Tem-Bots reveled that most of the buildings of the Institute are still intact. This was not a surprise since the Institute was many miles from the epicenter of any nuclear blast.

The entire area is still flooded by high radiation. As a result the bots were unable to located any sign of life in the immediate area, no Human, animal or plant life. All of the trees and foliage near the Institute are dead and likely to remain so for years, possibly decades or even centuries.

The Institute's communication array was examined. As suspected the transmitter assembly has been completely rendered inoperable by high radiation. While the assembly is still intact, most of the sensitive electronics will need to be replaced to make the assembly operational again. Since the bots are only designed to record data, they will be unable to accomplish this task.

The Institute's sensors were also examined by the bots and they are completely in tack but operating at a very low power level. A simple rerouting would boost both their sensitivity and range.

Three additional bots were released into the underground tunnel between the Institute and the state capitol. All three penetrated 5.7 miles in to the tunnel. At that point their main processing chips became inoperable due to high levels of radiation. It is not recommended to send any further bots into the tunnel at this time.

Dr. Kay recommends that the bots continue to be used to survey the area in and around the Institute but for no longer than 3 hours until either the levels of outside radiation fall by at least 50% or if he can increase their shielding. On there next survey the bots should be sent inside the above ground buildings of the Institute to determine if there is any equipment or materials that are salvageable and of use to us in the underground facility at this time.

The full detailed report is attached.

Re: Archive project

Daniel,

I am pleased to inform you that my team has finally been able to break the encryption on the documents contained in the flash transmission sent shortly before the nuclear attack two years ago. There are over 100,000 documents contained it the transmission.

We have started to review these documents and per your request we have prioritized those that mention the Institute and Alpha-Omega nuclear device. Dr. Farrell has written an algorithm that allows us to search the documents using these specific terms. So far we've identified over 10,000 that mention the Alpha-Omega device and about 8,000 that mention the Institute. Of these 8,000, several hundred mention you and Dr. Farrell's father. I have not allowed any of my team to open or review these documents. The hard drive enclosed contains these for your personal review.

Of the remaining documents that mention the Institute, most seem to deal with funding requests and analysis of our progress on various projects. There are a few hundred that deal with the construction of the underground facility which was apparently top secret at the time. There is also correspondence of then Senator Breck, dozens in fact, that mention the Institute. From these he was not the altruistic supporter that we all thought he was. Personally, from the letters that I have reviewed, he seemed more like political opportunist who saw support of the Institute as a means to further his own ambitions. However, his top aide, Harry MacDonald, appears to be have been a man of conscience and principle.

In regard to documents pertaining to the Alpha-Omega nuclear device, I am the only person to review these documents. It is a far more horrific weapon than we were told. It cannot just destroy a whole continent but the entire planet. I have place several hundred of these documents on the hard drive attached for you to review. It seems that the device was in transit on the underground railway during the attack. It was on its way to New York via the state capitol when the attack occurred. Hopefully, it is either buried in rubble or in the middle of the irradiated tunnel where no one can get to it for the next few centuries.

I have been informed that you want to be on the first survey team that leaves our bunker when the outside radiation levels decline to a safe level next month. I would ask you not to do this. You are too important to the Institute right now. Let others take the risk.

Yours Truly,

Alexandra Moore

SPEECH TO TEXT TRANSCRIPT

TRANSMISSION ONE: EXTERIOR FACILITY SURVEY - 08/05/2008

CONTROL ROOM: BEGIN TRANSMISSION. SURVEY TEAM IS AT EXIT 43, READY TO LEAVE THE BUNKER. PLEASE LET US KNOW WHEN YOU'RE READY DR. BUCKLEY.

BUCKLEY: WE'RE READY. MR. BISHOP IS UNLOCKING AND OPENING THE OUTER DOOR RIGHT NOW.

FRANKS: THE DOOR IS OPEN AND WE ARE STEPPING OUTSIDE.

CARTER: IT DOESN'T LOOK AS BAD AS I THOUGHT IT WOULD OUT HERE. NOTHING IS DESTROYED. BUT EVERYTHING LOOKS DEAD. NOT EVEN A MOSQUITO.

CONTROL ROOM: WHAT IS THE RADIATION COUNT?

FRANKS: LOWER THAN EXPECTED. STILL WE SHOULD ONLY STAY OUT HERE FOR THREE HOURS.

BISHOP: LET'S FIND THE COMMUNICATION ARRAY. REPAIRING IT IS OUR TOP PRIORITY.

CARTER: IT SHOULD BE ONLY A FEW YARDS FROM HERE ON THE RIGHT. YOU OK DR. BUCKLEY.

BUCKLEY: I'M FINE. JUST A LITTLE OVERWHELMED AT THE CONDITIONS OUT HERE. EVERYTHING IS SO BARREN. HARD TO BELIEVE IT IS THE MIDDLE OF SUMMER. LOOKS MORE LIKE WINTER.

BISHOP: THE ARRAY IS IN SIGHT JUST OVER THERE.

CARTER: THE DAMAGE DOESN'T LOOK TOO BAD. SOME DEAD TREE BRANCHES HAVE FALLEN ON IT.

FRANKS: THEY SHOULD TAKE NO TIME AT ALL TO CLEAR AWAY.

BISHOP: CONTROL WE'RE CLEARING THE BRANCHES OFF NOW. WHEN WE ARE FINISHED, RUN A DIAGNOSTIC.

CONTROL ROOM: CHECK.

FRANKS: HEY WHAT WAS THAT?

CARTER: WHAT WAS WHAT?

FRANKS: SOMEONE JUST THREW A ROCK AT ME.

BISHOP: HEY THERE IS ANOTHER ONE. IT FELL FROM THE SKY.

BUCKLEY: THEY LOOK LIKE METEORITES. LOOK ANOTHER FELL JUST OVER THERE.

CARTER: OH MY GOD! LOOK UP! IN THE SKY THERE ARE THOUSANDS OF THEM.

CONTROL ROOM: EVERYONE GET BACK TO THE BUNKER NOW.

FRANKS: THEY ARE STARTING TO COME DOWN ALL OVER THE PLACE. RUN.

BISHOP: DR. BUCKLEY, LET ME HELP YOU. TAKE MY...(TRANSMISSION TERMINATED)

FRANKS: MY GOD! BISHOP IS DEAD. A METEORITE HIT HIM RIGHT IN THE CHEST.

CONTROL ROOM: HOW FAR ARE YOU FROM EXIT 43?

CARTER: JUST A FEW YARDS. JULIE, HELP DR. BUCK...(TRANSMISSION TERMINATED)

BUCKLEY: CARTER'S DEAD. WE ARE ALMOST TO THE ENTRAN...(TRANSMISSION TERMINATED)

CONTROL ROOM: FRANKS REPORT. FRANKS! JULIE ARE YOU THERE?

FRANKS: DR. BUCKLEY HAS BEEN HIT. HE'S DEAD.

CONTROL ROOM: LEAVE HIM! GET INSIDE NOW.

FRANKS: OK JUST AT THE DOOR... (TRANSMISSION TERMINATED)

END TRANSCRIPT

Subject: Today's Tragedy

There are no words I can use to express the sorrow that we all feel about the death's of our four friends and colleagues earlier today. Peter, Julie, Ed and Dr. Buckley all gave their lives for us and the future of the human race.

We are still trying to determine what happened. As near as we can guess, the meteor shower was caused by debris from the moon falling to Earth. Two years ago most of the crust of the moon was torn off when the prototype of the Alpha-Omega device was demonstrated. Now it seems many of the smaller pieces are raining down across the planet.

Two of the satellites that we have monitored since the nuclear attack have been either disabled or destroyed. Of the remaining ones, it seems the meteor shower was not a local event. Similar showers have been occurring all across the globe wiping out many of the habitual areas still left. Australia has been completely destroyed. Large areas of the other continents are suffering a similar fate.

Here in North America the damage is less wide spread. There still seems to be many areas that are unscathed. But only time will tell if that remains the same.

We will continue to monitor the situation via the satellites are still functioning. However, today's meteor shower might just be the first of many to come. Since we can't control the satellites, just monitor them, we can't turn them to see how much of the moon's crust is falling into the Earth's gravity. Only time will tell

For now we will have to remain in our underground bunker. I can assure everyone that we are completely safe here. We have enough supplies to last a century. Our nuclear generator will last far beyond that, over a millennium. Our infirmary is one of the most advanced in the country.

We have to focus on continuing our work. Both Dr. Buckley and Dr. Farrell would us to soldier on. We own it to them to do so. The Temporal Chamber is still several years from completion but going well and ahead of schedule. Once the chamber is completed, we can continue Temporal Vortex experiments. The Hibernation Chamber is near completion and should be finished within the next six months.

While it is now unlikely that we will be able to contact other groups of survivors nearby, we must remember that we are still working for them. To give them a chance to survive. To give our planet and species a future.

We also must remember that five years ago three of our colleagues and three brave astronauts volunteered for a dangerous mission. Finishing our work will allow them to successfully complete that mission and come home to us.

To David Buckley, nothing I can say can express how sad we all are at the loss of your father. He was a great man who like Dr. Farrell inspired us all. You've endured several loses in your young life, from the death of your mother in the first simian revolt 17 years ago to the sacrifice of your sister and now the death of your father. We offer our deepest condolences to you and a promise. We will finish the work you father started and get your sister back to you.

There will be a memorial service for our fallen colleagues tomorrow at 11AM in storage area 12B for all who wish to attend.

From: Dr. Christopher Farrell

Re: Survey Report

Dr. Moore,

Forgive me for not sending this via the email system but the findings in the survey report are rather alarming. I thought it advisable to keep the as confidential at possible. The full report and analysis is attached.

To summarize, what Dr. Graff suspected is true. We are sinking into the sea. In fact, the whole southern half of New Jersey is and will one day be completely under water. This is due to a combination of the effects of global climate change and damage to the earth's crust caused by the nuclear war.

The good news is, according to Dr. Lawson, that this process will take many centuries. So there is no immediate danger to us or our facility. However, in 1,200 to 1,500 years it will be totally submerged.

While there is no impact to us or our immediate descendants, there is an impact to our current work and goals. Since before the nuclear war our main effort has been to construct a stable temporal portal. Construction on the temporal chamber is almost finished which will allow us to continue the vortex experiments that will lead to the stable portal.

In 2003, the ANSA XII was launched with the intention of sending a team to the year 3955 to prevent the destruction of the Earth witnessed by the Ape-o-nauts. Once that mission had succeeded the astronauts and the Institute's team were instructed to proceed to the underground facility to activate the Temporal Vortex and return to our century. This was the promise we made to them, that it would not be a one way trip. The only way for them to return is by activating the portal from the other side.

Now this was always a gamble but we assumed that there was a reasonable chance of success. Our nuclear reactor has enough fuel to last into that century. Our facility is fortified enough survive to that century. Even our electronics have sufficient shielding to last to 3955. However, we did not anticipate our facility sinking in to the ocean.

Therefore, the astronauts and our team will never be able to find or reach our facility to get back home. I think we must now consider alternatives to get them back. Dr. Kiley has suggested putting a team into the hibernation chamber for several centuries until after radiation levels have fallen to relocate key equipment. I recommend that we put a task force together to study this proposal as well as explore others.

Thank you,

Christopher Farrell

HASSLEIN INSTITUTE OF TEMPORAL PHYSICS

SUMMARY REPORT

DATE: 10/15/12	**REPORT ID:** 2184LEWY-1686DFTI	**PROJECT:** Temporal Chamber Tests
PROJ. LEADER: Dr. David Cox	**PROJ. TEAM:** Dr. Farrell, Dr. Buckley, Prof. Jones	
CLASSIFICATION: Confidential	**LOCATION:** Temporal Chamber	**DISTRIBUTION:** Dr. Moore

FINDINGS

Since the completion of construction of the Temporal Chamber 128 tests of the hardware and software have been conducted to assess the stability of the chamber.

The initial 28 tests all tests all failed to maintain a temporal field for longer than several micro-seconds. The results of those test were analyzed to recalibrate the field generators and revise the software.

The next 52 tests were each able to sustain a stable field for several seconds to over 1 minute. Additional recalibrations and software revisions were made due to the results of these tests.

An additional 13 tests were conducted. In each successive test both the stability of the field increased but attempts to increase the duration beyond 57 seconds.

At this stage Dr. Buckley, identified a software issue. He and Prof. Jones wrote new software code completely replacing the previous version.

The results of the next 16 tests increased the duration of the field from 30 seconds to 125 minutes. The analysis of those tests led to a final round of recalibrations.

The final 19 tests all were able to maintain a stable field from 2 hours & 30 minutes to 108 hours in the final test. In each successive test not only was the duration increased but the power level increased as well without any loss of stability in the field.

In the last 7 of these 19 test the temporal vortex was activated. In every case the intensity of the vortex increased as the power of the field increased.

The final results show that all project goals of Phase III, the construction of the Temporal Chamber and the generation of a stable temporal field, have been achieved. Additionally, the hypothesis that a stable temporal field would allow for temporal vortex experiments to proceed to Phase IV has been confirmed.

It is recommended that these experiments begin as soon as possible. For these tests additional energy will be needed from the reactor. Dr. Brown assures that power is available but some rewiring to channel that power will be needed. He is confident that he and his team can do that in a few weeks.

For these new experiments, it is recommended that Dr. Farrell & Dr. Buckley and Prof. Jones be retained on the team. It is also recommended that Dr. McKay and Dr. Wakefield be added to the team.

The full detailed report is attached.

Subject: Temporal Chamber Fire

I wanted to report on the full extent of yesterday's fire in the Temporal Chamber. The good news is that very little damage was done to the chamber or any of the equipment. Professor Jones did suffer from 3rd degree burns when the panel exploded. Thanks to the quick action by Dr. Buckley, Jones suffered no further injury. He is in the infirmary right now in the dermal regenerator and should make a full recovery.

My team has made a full survey of the chamber to determine the cause of the fire. It seems that an old circuit board in a back up computer overloaded causing the panel to explode starting the fire. Again thanks to Dr. Buckley, the fire was put out quickly with minimal damage. The circuit board in question should have been replaced years ago and its overload had nothing to do with the test that we were running at the time.

I have been assured that the chamber and all equipment in it, included the vortex generator, will be ready again in two days time. Which brings me to the next issue that I'd like to discuss.

My team and I have been running Phase IV experiments for several months now. We have been successful in increasing the size and duration of the temporal vortex creating a stable portal. We have even been successful in reducing the levels of harmful radiation in the vortex. It is now safe for a human to pass through it without any special suit needed for protection. However, while we have accomplished this, we still do not dare to send someone through because we have no idea where they will end up. That is the one problem that we haven't licked yet, to control where and most importantly when the portal leads.

We have sent dozens of Tem-bots through the portal. From the readings that were returned, some ended up under water, some in outer space. Most did return readings confirming an oxygen atmosphere with varying levels of radiation, most in what reads like barren desert areas but a few have sent back readings from what appear to be more tropical regions. However, there is one constant. While we can't determine exact dates or years, anything sent beyond about 2,000 years; the reading come back for outer space. This would confirm that the earth will be destroyed around that time as predicted.

Since we can't control the destination of the vortex without another portal on the other side, so to speak; Dr. Montieth has made a proposal for several staff to be put in the hibernation chamber on the lower level for five hundred years, that's the longest period a human can survive in hibernation. When they awake, they will activate the portal connecting it to our time. All personnel would then be evacuated to the future time period. We would then repeat this procedure again and again as necessary.

I don't recommend this leap frog approach at this time. It should be considered as a back-up only. Instead Dr. Farrell has made a proposal that would give us far more control over the vortex and portal. This proposal would be Phase V, or maybe Phase IVb is more apt. While some of his ideas are a bit radical, they can be done with our existing equipment. The upgrades to the temporal chamber and the vortex generator would take less than a week. His full proposal is attached. Please review.

If you do approve Dr, Farrell's proposal, he and Dr. Buckley have volunteered to run the first test in the chamber. Additionally the speech to text software has been upgraded so we can have a real time record for the test.

Please let me know if you wish to discuss.

Subject: Today's Incident

Before any rumors spread I wanted to inform everyone of exactly what happened this morning in the Temporal Chamber.

During the first test of adjustments to the vortex and portal based on a new theory by Dr. Farrell and Dr. Buckley, the portal was activated from the future. Specifically, the year 3091. Several people, or beings, passed though the portal from that time period including some familiar faces.

First, I am so happy to announce that Josie Buckley has returned to us. Sadly, she is the only survivor of the ANSA XII mission launched in 2003. Our friends and colleagues, Frank Dominic and David Roche, along with Astronauts Hudson, Franklin and Allen did not survive. It should be noted that while their ship did not reach the 40th Century, the goal of activating the portal from the future did work and thankfully we have Josie back with us.

Second, Josie is not the only familiar face that came through the portal. Astronauts Alan Virdon and Peter Burke of the ill fated ANSA IX mission accompanied her. However, they were joined by two apes and two Human females.

The apes are two male chimpanzees. One identifies himself as Galen and has been (or will be) a companion to Virdon & Burke for several years. Both astronauts have vouched for him. The other ape calls himself Lucius and claims he is descended from Caesar the Great. I think we all know the significance of the name Caesar.

The two Human females are Mary MacDonald who appears to be a healthy young woman. The other woman, Alma, bears scars of nuclear radiation poisoning. She is now in the infirmary in the dermal regenerator.

Exactly how this rather diverse group came together and activated our portal from the future will be determined over the next few days when they are debriefed and questioned. From what we have gathered so far is that both the ANSA IX and XII traveled to the 31st Century, although 10 years apart. The ANSA XII in 3075 and the ANSA IX in 3085. Unfortunately, Josie was unable to retrieve her ship's flight data disc so we won't know exactly what went wrong. Although Josie has told us that tests by Dominic and Roche after they landed concluded an inherent instability in the temporal field generated by their ship making it impossible to pinpoint a specific date. The good news is that Alan Virdon was able to save the flight disc from the ANSA IX. Professor Rockford and his team are analyzing it now.

For the time being all of our guests are confined to the security wing on level 3, except Josie of course and the woman Alma who is in the infirmary. Oddly, Virdon and Burke have no memory of the Institute or Dr. Hasslein despite our records showing that they visited here several times before the ANSA IX mission. Dr. Faraday thinks it might be a mental block brought on by their experiences in the future. I've also asked Dr. Buckley to search the archives for anything from their previous visits that might help jog their memories.

While Josie is having a quiet reunion with her brother today, and I ask that everyone respect their privacy; we will have an official ceremony tomorrow to welcome her back in storage area 5 on the warehouse level at 2 PM. Everyone is invited to attend.

Thank you,

Dr. Alexandra Moore
Director, Hasslein Institute of Temporal Physics

To: Dr. Alexandra Moore

From: Josephine Buckley

Dr. Moore,

Attached is the report of my experiences from the ANSA XII launch to my travelling back through the portal and arriving back here at the Institute. Per your request, I didn't use the email system to keep the information private.

To summarize my report, after the launch of the ANSA XII, and once the ship had reached the proper orbit; the temporal drive was activated with the intention of travelling to the year 3955. However, when the drive shut down we had only reached the year 3075. We o reactivated the drive to reach our target year but it overloaded causing the ship to drop out of orbit and crash somewhere in the southwestern United States. After the crash, we did a diagnostic on the drive and determined that there is an inherent instability in the temporal field that caused us to emerge from the vortex in the wrong year.

When our supplies started getting low, the NASA crew began to survey the nearby area to find food and water. They came upon a village of humans and started trading. However, the village was run by an ape Prefect, a chimpanzee. He sent a message about us to the apes main government, a place called Central City. A squad of gorilla police were sent to investigate. Once they arrived it was clear that their commander, a gorilla named Urko, was more interested in extermination than investigation. He hunted down all my fellow crew members and murdered them. I was lucky enough to get away and began moving east through human villages to get back to the Institute.

There was, or will be, large desert separating the west from the eastern seaboard. It took me several weeks to cross and I almost died doing so. When I got to the east the situation for humans was far worse than in the west. Humans had been forced out of all civilized villages and were treated like animals by the apes. Due to constant ape patrols I was forced into another desert further to the east. There I was captured by a group of Human mutants who lived in the underground ruins of New York City. They were guarding a nuclear missile. I lived with them for several years and gained the trust of their leader, Mendez XV, to acquire access to the missile. Examining it I learned it was no ordinary nuclear device but was capable of destroying the entire planet. Realizing it was possible to complete my mission, I tried to disable the device. However, I failed to so and was denounced as a traitor forcing me to flee.

I again hid out with human tribes while I tried to make my way to the Institute. Soon I met Virdon, Burke and Galen who had traveled east after hearing stories about me in human villages in the west. With their help we found the Institute and began reactivating the systems. There we found Mary, Alma and Lucius in the hibernation chambers on the lower level and revived them. Soon we were able to reactivate the vortex and enter the portal bringing our guests with us to the present.

That brings you up to date. All the details are in my full report.

Josephine Buckley

HASSLEIN INSTITUTE OF TEMPORAL PHYSICS

SUMMARY REPORT

DATE: 6/29/13	**REPORT ID:** 4678HJTY-6778KUEY	**PROJECT:** ANSA IX Flight Recorder Disc
PROJ. LEADER: Professor Rockford	**PROJ. TEAM:** Dr. McQueen, Dr. Lawson	
CLASSIFICATION: Confidential	**LOCATION:** HITP Lab #U14F	**DISTRIBUTION:** Dr. Moore

FINDINGS

All the data from the ANSA IX flight disc provided by Col. Alan Virdon has been down downloaded to the Institute's computers. To date, the data has been analyzed for radiation, temporal flux, gravitational forces, instrumentation failures, etc. using 13 separate programs and tests to determine what went wrong during the ANSA IX flight.

From what can be determined, the spacecraft encountered a radioactive turbulence of unknown origin after the deceleration phase while approaching Alpha-Centauri. This caused a failure of most of the ship's electronics and several other systems. The ship's automatic homing device was activated manually by one of the astronauts. However, due to the turbulence having the same exact temporal signature as the ship's vortex generator, the temporal drive was engaged throwing the ship 1,105 years into the future to emerge in the year 3085. Because the homing device was still active the ship's automated systems attempted a landing at Andrew's Air Force base in California. Due to the ship's damaged condition it failed to reach Andrew's and crashed about 50 miles south of Las Vegas.

According to Dr. McQueen there is a 1 in 14 trillion probability that the temporal signature of the radioactive turbulence would have the same temporal signature as the ship's vortex generator. He believes that it cannot be a coincidence and has theorized that the turbulence was actually caused by the ship's temporal drive being activated and then traveling backwards through time. This would be a reverse causality loop which some believe to be impossible.

Additional analysis determined that there is an inherent instability in any temporal vortex created. The same instability that we have encountered in our own vortex tests. While it would been helpful to have had the disc from the ANSA XII to compare, Ms. Buckley has reviewed our results to the diagnostic preformed after that ship landed. She has confirmed that the results are almost exactly the same, as best she can remember.

Comparing these results with those of recent vortex and portal tests may lead to a solution. Both Dr. Lawson and Dr. McQueen are convinced that using the data from the ANSA IX flight disc can and will allow us to overcome the instability problem of our portal.

Further tests will be needed, but if they are successful the adjustments made will allow us to direct the vortex with pinpoint accuracy to any time and any place within a 1,000 mile radius of the Institute.

Dr. Cox has reviewed our findings and is in full agreement. He has already instructed Drs. Farrell and Buckley to work with Drs. McQueen and Lawson on making the necessary adjustments to the vortex generator and portal after which a new series of test will be conducted.

The full detailed report is attached.

Subject: Debrief and Interrogation Summary

Attached are the full transcripts of our debriefing sessions with Astronauts Virdon and Burke and interrogations of the others that came through portal with them two weeks ago. Here is a summary.

Initially, neither Virdon or Burke had any memory of the Institute, Dr. Hasslein, the early ANSA missions or even the Ape-o-nauts. At first I thought this memory block was due to the trauma and shock of their experiences. At my direction, Dr. Buckley conducted a search of the archives to find anything to jog their memories. What he found was startling. Back in 1980, both men had refused to test the temporal drive during their mission. A secret congressional committee authorized the ONI to hypnotize both men several times and block their memory of the test and related subjects until after the test was conducted. Using hypnosis, we were able to remove the blocks from both men's memories. Once done, both Virdon and Burke experienced much anger and anxiety about what it had done to them and the debriefings had to suspended for several days. We are in the process of counseling both men so they can better handle all this on a psychological level.

When the debriefings resumed, they confirmed what Josie Buckley had reported. Their ship crash landed in the southwestern United States in the year 3085. Astronaut Jones was killed in the crash. Intelligent apes controlled the government and all humans were treated as a lower species of cheap labor. After being aided by the chimpanzee Galen, they escaped captivity and moved from village to village eluding their simian pursuers lead by a gorilla named Urko. After a time they started hearing stories of another human who was like them, Ms. Buckley. Trying to find her they began to track her journey moving to the east. Like Josie, they had to endure a trip through a large desert to reach the eastern seaboard. Once there they found that humans were living in primitive tribes. Eventually, they encountered Ms. Buckley hiding with one of these tribes. With her as a guide they were able to find the whereabouts of the Institute and they helped her to reactivate its systems to engage the portal and bring them here. They also have the highest praise for the chimpanzee Galen who the say they owe their lives. Interrogation of this Galen matches their account.

Our other three guests (Mary MacDonald, Alma and Lucius) have a very different story, they claim to come from a settlement called Ape City here on the east coast. They were caught in a conflict between the apes there and human survivors living in what they called the Forbidden City. The woman Alma is one of these survivors and her DNA shows extensive mutations caused by nuclear radiation. During that conflict the humans fled through underground railway tunnels to another nearby city with what they identified as the Alpha-Omega bomb. When the ape army began to follow them through the tunnels the missile's rocket motor was engaged killing most of the apes. This also caused the railway car they were travelling in to be diverted into another tunnel and they wound up at the Institute. When they got here they wandered into Hibernation Chamber and accidently activated it. They have no idea how long they were in hibernation before being revived by Ms. Buckley and the astronauts, but Ms. Buckley in her report states that the data from the chamber indicates that is was 402 years.

Additionally, the chimpanzee Lucius claims he is a descendant of a chimpanzee called Caesar the Great. We assume that to be the ape rebellion leader Caesar, the child of Cornelius and Zira, The woman Alma claims she is descended from Mendez the first. Some have presumed that she might be referring to Colonel Steven Mendez who briefly served here as head of security in the early '90s. We do not have DNA samples from the ape Caesar to confirm this claim. We do have from Col. Mendez but Alma's DNA is so mutated the test was inconclusive. However, we did a DNA test on Ms. MacDonald and there is 70% probability that she is related to Harry MacDonald who was Gov. Breck's assistant.

Please review the full transcripts and let me know if you have any questions.

HASSLEIN INSTITUTE OF TEMPORAL PHYSICS

MEDICAL REPORT

DATE: 7/1/13	**PATIENT:** Alma		**REPORT ID:** 4678HJTY-6778KUEY
SEX: Female	**AGE:** Unknown	**HEIGHT:** 5′ 6″	**WEIGHT:** 123 Lbs.
PHYSICIAN: Dr. S. Kiley	**LOCATION:** Medical Bay 1		**DISTRIBUTION:** Dr. Moore

SUMMARY

The patient was brought to Medical Bay 1 by security after she emerged from the Temporal Chamber. From the appearance of her skin, or lack of it, they assumed that she was injured by her journey through the portal.

Our initial examination of her revealed that this was her natural condition. All the upper epidermal layers of normal human skin were non-existent on the patient. We concluded that continued exposure to the air here in our bunker, as clean as it is, would have eventually led to infection and ultimately death. How she has survived this long is a mystery. It has been theorized that there may have been a radiation source near her community that killed any and all harmful bacteria.

We took several blood and DNA samples from her to analyze and found that her DNA was severely mutated, most likely do to long term exposure to nuclear radiation by her ancestors. One of the results of this was the skin's natural regenerative abilities had been suppressed. However, we placed the patient into the dermal regenerator to see if was possible to stimulate these regenerative abilities.

After several long sessions in the dermal regenerator over 9 days, the process appears to be a success. Not only have her upper epidermal layers regenerated but hair follicle growth has been stimulated as well. The result being that she is no longer in danger of infection and looks like a normal human being.

Unfortunately, she is still not a normal human due to the mutations of her DNA. The main effect of these mutations is that certain regions of her brain are more developed giving her unusual mental abilities. One of these allowed her to hide her true appearance from some of her companions for a time. She can also communicate mentally to a degree without the need for speech. She has done so with several of us and it is an interesting experience. She can't directly read other person's thoughts, but she can tell of they are telling the truth or lying.

While these abilities are intriguing, over several generations they would ultimately lead to psychosis in the patient's descendants.

Additionally, we have determined the specific mental frequencies and wavelengths in which these psychic abilities operate. I've spoken with Dr. Kay and he believes it is possible to construct a device that will block these frequencies and wavelengths.

While the patient does not at all to appear to be any sort of threat, it might be prudent from a security perspective to use this device throughout the complex if the situation changes or if we encounter other of similar beings who are not as friendly and peaceful as the patient.

The full detailed report is attached.

Subject: Temporal Chamber Modification and Recommendations

Dr. Cox, Dr Farrell and I have completed all the modifications to the Temporal Chamber, Vortex and Portal based on the data from the ANSA IX flight recorder disc. We have run over fifty tests with Dr. McKay's tem-bots and we have been successful in directing to vortex to any future date we wish and to any location within a 50 mile radius of the Institute. We have tried to increase that radius but 50 miles seems to be the maximum.

Now that this goal has been accomplished there are several options that we must consider. As you know, Col. Virdon has requested that we send him back to his home in Houston just before the nuclear war to save his wife and son. Unfortunately, we are unable to open the vortex to the past, only to the future.

However, there are other scenarios that we might consider that will have the ripple effect to save them and all Human civilization. After consulting with Drs. Cox, McKay and Farrell, Virdon, Burke, Prof. Rockford and my sister Josie; we have developed three recommendations that should have a good chance of success.

From our research in the archives and the intelligence provided by our 'time travelers', we know that in about 2,000 years the Earth will be destroyed by a massive nuclear explosion. The result of that event sent the Ape-o-nauts back in time to the year 1973 which began a series of events that led to the nuclear war 7 years ago. We also know that the weapon called the 'Alpha-Omega' bomb is the only weapon capable of causing that level of destruction. We now know that this weapon is currently stored in the underground bunkers of the state capitol and that in approximately 700 years it will be moved to the underground ruins of New York City and remain there to at least the late 31st century and perhaps beyond.

Thus our three scenarios are as follows:

1. Use the portal to send a team to the state capitol now to disarm and destroy the bomb. Due to deadly radiation levels, we cannot reach it through the underground railway system. This is the only way to travel to the capitol. We simply have to set the location and the vortex to 1 second forward in time to do it. This is deemed the most likely scenario for success. If the bomb is destroyed now it cannot be detonated in 2,000 years. The woman Alma knows layout of the underground bunker and where the bomb is most likely to be stored at this time.

2. Send a team back to the 31st century and destroy the bomb at that time. Virdon and Burke know the lay of the land there and Josie knows where the bomb is housed in the ruins of NYC. This scenario has greater risks and less chance of success than the first scenario. However, the team will have the resources of the Institute at their disposal in that time period.

3. Send a team or teams to the year 3955, the year of Earth's destruction to stop the detonation of the 'Alpha-Omega' bomb during the war described by Cornelius and Zira. This is the riskiest of the three scenarios. We have no intelligence about the conditions on the ground at that time or even the location of the bomb. This should only be considered as a last resort if scenarios 1 and 2 prove to be a failure.

Attached are more detailed reports on each of the three scenarios. Please review.

Yours truly,

Dr. David Buckley
Associate, Hasslein Institute of Temporal Physics

HASSLEIN INSTITUTE OF TEMPORAL PHYSICS

MISSION REPORT

DATE: 7/21/13	**MISSION:** Alpha-Omega Disarm	**REPORT ID:** 6589JERI-4898KEYW
MISSION DIRECTOR: Dr. Buckley	**TEAM MEMBERS:** Dr. Cox, Capt. Green, Alma	
TARGET DATE: 7/20/13	**TARGET LOCATION:** State Capitol	**DISTRIBUTION:** Dr. Moore

SUMMARY

On July 20, 2013 the Temporal Chamber was sealed and the portal opened with the goal of sending a team to the state capitol to locate the Alpha-Omega nuclear device and disarming it so it cannot be detonated in 2,000 years time destroying the Earth.

The mission team was comprised of Dr. Cox, who's technical expertise would be needed to disarm the weapon, Captain Green to provide security and Alma acting as a guide to the location of the bomb. As mission director, I remained in the temporal chamber to monitor their progress and pull them back to the Institute if necessary.

When the temporal vortex was activated, the portal was set to 1 second in the future and to an area just outside the capitol. Several tem-bots were sent through the portal to do an initial survey. They reported back high but acceptable radiation levels and surface conditions to send the full team through.

As a precaution the team donned radiation suits before entering the portal. However, when they emerged on the other side both Dr. Cox and Capt. Green were dead and Alma severely injured from extremely high levels of radiation. The team was immediately pulled back to the Institute. Alma barely survived the journey. Dr. Kiley believes that her previous exposure to nuclear radiation is what allowed her to survive. She is now in the infirmary but is expected to recover in several days.

Analysis of the mission data has lead to the conclusion that while the portal allows does travel through time, those going through it still travel through space as well. Since the space from here to the state capitol is currently flooded with deadly levels of radiation, anyone traveling from here to there, even through the portal, will be exposed to that radiation. Since the radiation field will not dissipate for several centuries, we cannot send a team to the state capitol in the present time or within several hundred years.

It is now recommended that second recommended scenario be attempted. This would require sending a team back to the 31st century to locate and disarm the Alpha-Omega nuclear device. By that time the radiation will be gone and safe travel possible. Both Col. Virdon and Maj. Burke have volunteered for this mission along with Josie Buckley, Mary MacDonald and the two evolved chimpanzees. They are familiar with the lay of the land, so to speak, in that century and Ms. Buckley has the technical expertise to disarm the weapon. It is also recommended that they be split into two teams, one to be sent to the Institute, which we know will still exist in 31st century and another to be sent to the eastern desert where Ms. Buckley reports the weapon will be stored at that time. We will be ready to initiate this mission within the next 4 days of your approval.

The full detailed report and recommendation is attached.

Subject: Another Mission Failure

I am still preparing my full report on our most recent mission failure but wanted to give you a quick recap on what went wrong. As you know on July 27th we sent two teams through the portal to the target date of September 13th, 3091. The first team (Dr. Buckley, Dr. McKay, Prof. Rockford and Col. Mitchell) were sent to the Institute to reactivate its systems and act as a base in support of the second team. That team (Col. Virdon, Maj. Burke, Ms. Buckley and the ape Galen) were sent to a position a few miles from the ruins of New York City.

While the first team was successful, the second team was not. Due to Ms. Buckley's previous attempt at disabling the weapon, the Humans living in the ruins increased their security. Shorty, after gaining access to the underground city, the team came under what can be only described as a psychic attack. They barely escaped with their lives. Because they fled so rapidly, all of their equipment was lost and they had to make their way back to the Institute. This required them to cross ape controlled territory. The ape Galen was key to guiding them through this hostile area but Virdon and Ms. Buckley were captured by a gorilla patrol. Fortunately, Galen was contacted by a chimpanzee named Quinctius. This ape said he was the leader of group of ape scientists called 'The Society of Virgil'. He then helped Galen and Burke free Virdon and Ms. Buckley. He also provided them with transportation to get back to the Institute. This Quinctius gave them a copy of something he called 'Ape City Chronicles', a history of that community's the first 75 years. We are currently examining this document in hopes of gaining some useful intelligence from it.

The team was able to make it safely back to the Institute but was followed by Gorilla soldiers. This forced both teams to flee through the portal back to the current time. They did leave a tem-bot behind. From the data it transmitted back it would seem these gorillas completely destroyed the facility so we will be unable to return there.

We now have two options to consider. The first is to send teams to a random time in the future with the hope of finding and disarming the Alpha-Omega device. Based on this past experience, it would have little chance of success. The second is one that was considered before but rejected, sending teams to the 40th century. Their mission would be twofold. In addition to preventing the detonation of the Alpha-Omega bomb, they would be tasked with stopping the launch of the ANSA I by the ape-o-nauts. Virdon, Burke and Galen have already volunteered for this mission. So has Mary MacDonald, Albina and the ape Lucius. They all have knowledge of the ape settlement and of the underground ruins where the Alpha-Omega device is likely to be housed. Additionally, if the teams can make contact with George Taylor or one of the other Astronauts who may still be alive, they would have additional support on the ground to complete their missions. I would also like to volunteer for this mission.

One last thing, according to the ships' clocks of the ANSA I, the date of the destruction of earth is November 23rd, 3955. However, we have done scans and even sent some tem-bots through the portal to that date and beyond. There is no evidence of a massive nuclear explosion on that date. Dr. Jones has postulated that due to the position of Neptune that month, the ship's clock took an inaccurate reading. The ship's initial reading was that it landed in the year 3978. We have scanned from that date forward and found evidence that the earth will be destroyed on February 8th, 3979.

Please approve this mission. We believe it is our last hope to save the future, and the past.

One last thing, I'm promoting Dr. McQueen's daughter, Joanne, to be our new assistant.

Sincerely,

Dr. Christopher Farrell
Senior Associate, Hasslein Institute of Temporal Physics

HASSLEIN INSTITUTE OF TEMPORAL PHYSICS
MISSION BRIEFING SUMMARY

DATE	August 22, 2013
MISSION	Alpha-Omega 3A
TEAM	Team One: Christopher Farrell, Alma, Galen and Lucius
TARGET	Near ape settlement on February 6th, 3978 08:00 Hours
BACKGROUND	Based on the testimony of Cornelius and Zira back in 1973 we know that an army of gorillas left their settlement (called Ape City) two days before the destruction of the Earth on February 8th, 3979. The purpose of that army was to invade a settlement of unknown beings living in a vast desert (called The Forbidden Zone). Thanks to the information provided by Lucius and Mary MacDonald (confirmed by Virdon, Burke and Galen) the location of Ape City has been plotted. It appears to be (or will be) located in what is now central New Jersey). We also know, according to Josie Buckley, that mutated humans were living in underground ruins of New York City in the so-called Forbidden Zone during the 31st century and were guarding the Alpha-Omega nuclear device which is capable of destroying all life on the planet. Therefore, we have surmised that this ape army came in to conflict with the underground mutants resulting in the detonation of the Alpha-Omega bomb as witnessed by Cornelius & Zira from space. The team will be sent via the Temporal Portal to a secluded location just outside of Ape City on the morning the ape army departs for the Forbidden Zone. Being apes, Galen and Lucius will act as guides. Alma will use her psychic abilities to project a mental image of her and Dr. Farrell as apes. Dr. Farrell's lab assistant Joanne McQueen will be the only person in the Temporal Chamber during your mission and will monitor your progress. A second team (Team Two) will be sent 24 hours later to a location in the Forbidden Zone. The team will not be outfitted with any weapons but will be given scanners, temporal tags (for items to be sent back to the Institute) and Speech to Text communication devices to maintain contact with Team Two and the Institute. To that end the Institute will open the portal every six hours to receive reports. The system has been upgraded to also transmit pictures. Additionally, each team member will be outfitted with a psychic blocking device developed by Dr. Kay that should shield the team from the type of mental attacks experienced by the team on Mission 2.
OBJECTIVES	The goals of this team are: 1. Make your way to Ape City in order to track the ape army and provide intelligence to Team Two. 2. If possible, delay or divert the ape army from attacking the settlement of the underground mutants. 3. Rendezvous with Team Two in the Forbidden Zone or the underground mutant settlement. 4. Prevent the detonation of the Alpha-Omega device and, if possible, disable it so it can never be used.

HASSLEIN INSTITUTE OF TEMPORAL PHYSICS
MISSION BRIEFING SUMMARY

DATE	August 22, 2013
MISSION	Alpha-Omega 3B
TEAM	Team Two: David Buckley, Alan Virdon, Peter Burke and Mary MacDonald
TARGET	ANSA I Launch Site on February 7th, 3978 09:30 Hours
BACKGROUND	Based on flight data from the ANSA I spacecraft, we know that it was re-launched approximately 4 hours prior to the destruction of the Earth. While the flight data reported the date as November 25th, 3955 our scans of through the temporal vortex have led us to the conclusion that the actual date is February 8th, 3979. The ship's homing beacon has been located via our scans through the vortex as well. Be aware that during this time period that the Institute will no longer exist, the local area will have sunken under sea level by then. Thus, there will be no real time support possible. The team will need to rely on intelligence provided by Team One being sent a day earlier. However, the temporal vortex will be opened every six hours or as needed to support the teams by Dr. Farrell's assistant Joanne Queen. She will be the only person in the Temporal Chamber during the mission. The team will be sent via the Temporal Portal to a launch site of the ANSA I on the target date. After that phase of the mission has been completed, Ms. MacDonald will guide the team across "The Forbidden Zone" to rendezvous with Team One, who will be tracking the Ape Army, either above ground or in the underground mutant human settlement. Josie Buckley has provided the location of the underground human mutant settlement where the Alpha-Omega nuclear device is most likely located as well as the location of several entrances to this underground complex. Unfortunately, she is still recovering from she incurred on a previous mission and is not well enough to join either team on this mission. From the testimony of Cornelius and Zira in 1973, Astronauts George Taylor and John Brent should still be alive on the target date. They could provide valuable intelligence and back-up. The team will be outfitted with handguns and rifles in addition to scanners and Speech to Text transmitters and communication devices to contact with Team Two and the Institute. The team also will be outfitted with Dr. Kay's psychic blocking devices.
OBJECTIVES	The goals of this team are: 1. Locate the ANSA I spacecraft and disable it, destroy it if necessary, to prevent its launch and thus stop the Ape-o-nauts journey back to the year 1973. 2. Rendezvous with Team Two. 3. Locate and contact Taylor and/or Brent. 4. Locate the Alpha-Omega bomb and prevent it's detonation and, if possible, disable it so it can never be used. 5. Return safely to the Institute.

Christopher Farrell [ChristopherFarrell@hassleininstitute.edu]
Subject: Good luck!

I wanted to wish you both good luck before you leave on your mission tomorrow. If you succeed you will have saved the planet, not only in the year 3978 but our present. You will have created a new timeline in which none of the terrible events of the last 40 years will not have happened, in which we hopefully won't have to worry about some deranged orangutan overlord taking over one day.

Because of the possibility of success, I have ordered that the Institute's archive servers be moved into the temporal chamber to protect them from any changes in the timeline. These servers contain all our records back to Dr. Farrell's father's Scientific American article back in 1974 as well as all the data from the Oakland Science Institute project. They also contain all the documents from the burst transmission received back in '06. I feel this is a necessary step to take especially if you are successful. When you step out of the chamber after your mission, you'll be stepping into a whole new world and you won't know what you'll be encountering.

In regard to your mission, the first priority is to prevent the re-launch of the ANSA I. You must stop Cornelius and Zira from going back in time and initiating the chain of events that led to the nuclear war. I cannot stress the importance of this goal. Hopefully, Virdon and Burke have enough knowledge of the craft to disable it. However, if they fail, destroy the ship. Shoot it out of the sky if you have to. Do anything to stop the ANSA I from going into orbit.

As far as the second objective, preventing the detonation of the Alpha-Omega device; that may not be necessary if the first objective is achieved. However, proceed with that mission either way. It can't hurt to have a little insurance.

I am a bit concerned about your team members. Virdon and Burke should not be a problem since they share our goals. However, sometimes I suspect that Col. Virdon has a hidden agenda. Ms. MacDonald seems like trustworthy person. We have promised to send her back to her own time after the mission is over, but that may not be possible if you are successful. I am most worried about Alma and the two apes, Galen and Lucius. We are asking these three to in a sense betray their own kind. While none of them have been told that our goal is to prevent the future in which they all come from, they may still have allegiances that will be tested during the mission. Be careful and watch the three of them closely.

One thing though, regardless of the results of your mission, do not allow either ape to return to the Institute in the present. What use would it be to stop Cornelius and Zira from going back in time only to start the whole thing over again with Galen and Lucius. Virdon and Burke may object to this because of their loyalty to Galen, which is why they have been assigned to separate teams. But don't allow them to dissuade you.

Finally, I have instructed Ms. McQueen to monitor the time vortex closely for any changes in the timeline. Should she detect any disturbance, she is to pull you and the rest of the humans on your teams back to the Institute immediately. We have no idea if a massive change in the timeline will be survivable. Dr. McQueen, who is very proud of his daughter being given this assignment, has theorized that if the timeline is altered; the world would just transform around you. But for safety's sake you'll be pulled back. I've also instructed Ms. McQueen to monitor everyone's vital signs and to pull back anyone who is injured. Still make sure everyone has an emergency beacon to activate just in case.

Good luck and Godspeed,

Dr. Alexandra Moore
Director, Hasslein Institute of Temporal Physics

HASSLEIN INSTITUTE OF TEMPORAL PHYSICS

SPEECH TO TEXT TRANSCRIPT

MISSION: ALPHA-OMEGA 3A	TEAM: ONE	TEAM LEADER: CHRISTOPHER FARRELL
TRANSMISSION: ONE	TIME: INSTITUTE: 8/24/2013 10:45 AM	TARGET: 2/06/3979 9:22 AM

FARRELL: BROAD SWORD TO DANNY BOY, COME IN ... BROAD SWORD TO DANNY BOY ...

McQUEEN: READING YOU DANNY BOY....ARE THESE CODE NAMES REALLY NECESSARY?

FARRELL: NOT REALLY JOANNE.

McQUEEN: GOOD. READY TO RECEIVE YOU REPORT DR. FARRELL.

FARRELL: AS PLANNED THE TEAM (GALEN, LUCIUS, ALMA AND MYSELF) EMERGED FROM THE VORTEX ABOUT A MILE WEST OF THE SIMIAN SETTLEMENT. THE LOCATION WAS SECLUDED AND WE WERE NOT OBSERVED. LUCIUS KNEW THE AREA AND GUIDED US TO THE SETTLEMENT. IT TOOK US ABOUT A HALF HOUR TO WALK THERE. WHEN WE DID IT WAS NEARLY DESERTED. NO SIGN OF THE APE ARMY.

McQUEEN: WAS ANYONE IN THE SETTLEMENT?

FARRELL: WE FOUND SEVERAL WAGONS FILLED WITH CHIMPANZEES. THEY ASKED US TO FREE THEM AND WE DID. I SHOULD ADD HERE THAT ALMA'S PSYCHIC PROJECTION WORKED PERFECTLY. NONE OF THE CHIMPS SUSPECTED THAT WE WERE HUMAN.

McQUEEN: GREAT. CONTINUE.

FARRELL: AMONG THE CHIMPS THAT WE FREED, WE MADE AN INTERESTING DISCOVERY. ANOTHER CHIMPANZEE NAMED LUCIUS.

McQUEEN: REALLY?

FARRELL: YES. AND EVEN MORE ASTONISHING, THE TWO COULD BE TWINS. I BELIEVE THAT THIS LUCIUS MUST BE A DESCENDANT OF OUR LUCIUS. ANYWAY, LUCIUS 2, AS I WILL CALL HIM, INFORMED US THAT THE GORILLA ARMY LEFT AT DAWN, SEVERAL HOURS AGO AND WERE HEADED EAST. HE THEN BROUGHT US TO HIS HOUSE, WHICH OUR LUCIUS TOLD US HAD BEEN HIS HOUSE CENTURIES EARLIER. LUCIUS 2 SEEMED VERY CURIOUS ABOUT US AND WHERE WE HAD COME FROM.

McQUEEN: WHAT DID YOU TELL HIM?

FARRELL: I DECIDED TO TRUST HIM AND TOLD HIM WHO WE ARE. I EVEN HAD ALMA DROP THE IMAGE OF HER AND ME AS CHIMPS.

McQUEEN: HOW DID HE TAKE IT?

FARRELL: VERY CALMLY. WE WERE NOT THE FIRST TALKING HUMANS HE HAS MET. HE SAID THAT HE HELPED TAYLOR ESCAPE. HE THEN OFFERED TO TAKE US TO MEET HIS AUNT ZIRA AND HER HUSBAND CORNELIUS.

McQUEEN: WOW!

FARRELL: BEFORE WE LEFT OUR LUCIUS SHOWED US A HIDDEN COMPARTMENT IN ONE OF THE WALLS OF THE HOUSE. HE SAID HIS FATHER HID THINGS THERE. INSIDE THE COMPARTMENT WERE ANCIENT COPIES OF A NEWSPAPER CALLED "THE APE". I'VE TAGGED THEM FOR TRANSPORT BACK TO THE INSTITUTE.

McQUEEN: WILL DO.

FARRELL: LUCIUS 2 THEN BROUGHT US TO CORNELIUS AND ZIRA'S HOUSE. UNFORTUNATELY, WE MISSED THEM TOO. THEY HAD ALL READY LEFT FOR THE LAUNCH SITE I GUESS. WE ARE NOW GOING TO FOLLOW THE APE ARMY AS BEST WE CAN. FARRELL OUT.

END TRANSMISSION

SPEECH TO TEXT TRANSCRIPT

MISSION: ALPHA-OMEGA 33	TEAM: TWO	TEAM LEADER: DAVID BUCKLEY
TRANSMISSION: FIVE	TIME: INSTITUTE: 8/25/2013 8:13 AM	TARGET: 2/07/3979 7:00 AM

BUCKLEY: BUCKLEY TO BASE...BUCKLEY TO BASE...

MCQUEEN: READING YOU LOUD AND CLEAR DR. BUCKLEY

BUCKLEY: GREAT. WE HAVE ARRIVED SAFE AND SOUND.

MCQUEEN: GOOD TO HEAR. READY TO RECEIVE YOU REPORT DR. BUCKLEY.

BUCKLEY: WHEN WE ARRIVED, MY SCANNER IMMEDIATELY LOCKED ON TO THE ANSA ONE'S HOMING BEACON. IT WAS ONLY 100 YARDS AWAY, JUST OVER A SMALL HILL. AS SOON AS WE GOT TO THE TOP OF THE HILL, I WAS ECSTATIC. I'M SENDING A PICTURE OF WHAT WE SAW. TRANSMISSION:

MCQUEEN: OH MY GOD! WHAT HAPPENED?

BUCKLEY: MY FIRST THOUGHT WAS THAT THERE WAS AN ACCIDENT AND OUR MISSION WAS ACCOMPLISHED. UNFORTUNATELY, UPON INVESTIGATION WE DISCOVERED THAT THIS WAS THE ANSA TWO SPACECRAFT AND NOT THE ANSA ONE.

MCQUEEN: THE ANSA TWO?

BUCKLEY: YES. VIRDON AND BURKE ENTERED THE SHIP AND CONFIRMED IT. THEY ALSO RECOVERED THE SHIP'S FLIGHT DATA DISC. I'M TAGGING THAT FOR RETRIEVAL. WE ALSO FOUND A GRAVE. MY SCANNER CONFIRMS THAT IT IS COMMANDER MADDOX.

MCQUEEN: OK. NOW WHAT?

BUCKLEY: WE ARE PICKING UP ANOTHER BEACON SIGNAL. MUCH WEAKER AND FARTHER AWAY.

FARRELL: THIS IS CHRIS BREAKING IN. I'VE BEEN MONITORING YOUR TRANSMISSION. DAVID, DO YOU THINK YOU CAN FIND THE ANSA ONE SHIP IN TIME?

BUCKLEY: WE HAVE FOUR HOURS UNTIL IT LAUNCHES. WE'LL DO OUR BEST TO FIND IT IN TIME AND PREVENT IT FROM TAKING OFF. HOW IS YOUR TEAM'S PROGRESS?

FARRELL: WE HAVE BEEN TRACKING THE APE ARMY THOUGH THE NIGHT THANKS TO THE DIRECTIONS AND MAP GIVEN TO US BY LUCIUS 2. HE WANTED TO ACCOMPANY US BUT I DIDN'T WANT TO RISK HIS SAFETY. WE FINALLY CAUGHT UP WITH THE ARMY AT DAWN. GALEN AND OUR LUCIUS VOLUNTEERED TO INFILTRATE THEIR ENCAMPMENT POSING AS MEDICS.

BUCKLEY: DID THEY LEARN ANYTHING OF VALUE?

FARRELL: JUST THAT THE ARMY HAS NO IDEA WHERE THEIR ENEMY IS LOCATED. IT IS SEARCHING FOR THEM.

BUCKLEY: INTERESTING.

FARRELL: AM GOING TO HAVE TO SIGN OFF FOR NOW. THE ARMY IS STARTING TO MOVE OUT AND WE HAVE TO FOLLOW THEM. ALSO, MY SCANNER IS PICKING UP A TEMPORAL DISTURBANCE BUT I CAN'T LOCATE IT.

BUCKLEY: I HAVE THAT TOO. WILL CONTINUE TO SCAN. I'M GOING TO SIGN OFF AS WELL TO START OUR SEARCH. NEXT TRANSMISSION WILL BE IN TWO HOURS. BUCKLEY OUT.

END TRANSMISSION

SPEECH TO TEXT TRANSCRIPT

MISSION: ALPHA-OMEGA 33	TEAM: TWO	TEAM LEADER: DAVID BUCKLEY
TRANSMISSION: SIX	TIME: INSTITUTE: 8/25/2013 12:15 PM TARGET: 2/07/3979 7:00 AM	

MCQUEEN: COME IN DR. BUCKLEY...COME IN DR. BUCKLEY...

BUCKLEY: BUCKLEY HERE.

MCQUEEN: REPORT STATUS.

BUCKLEY: THE TEAM SPLIT IN TWO TO SEARCH FOR THE ANSA ONE. MS. MACDONALD AND I WENT NORTH. VIRDON AND BURKE WENT SOUTH.

MCQUEEN: ANY LUCK FINDING IT?

BUCKLEY: VIRDON AND BURKE FOUND IT. UNFORTUNATELY, THEY WERE TOO LATE. THE SHIP WAS LAUNCHING JUST AS THE FOUND IT. VIRDON SENT ME A PICTURE A FEW MOMENTS AGO. TRANSMISSION:

MCQUEEN: WHAT NOW?

BUCKLEY: TRANSPORT VIRDON AND BURKE BACK TO THE INSTITUTE. THERE IS NOTHING MORE THEY CAN DO NOW.

MCQUEEN: YES, SIR.

BUCKLEY: BURIED NEAR THE LAUNCH SITE THEY FOUND A GROUP OF SCROLLS. FROM WHAT VIRDON SAID IT APPEARS TO BE A DIARY OR JOURNAL WRITTEN BY THE APE CORNELIUS. THEY WILL BRING IT BACK WITH THEM. START REVIEWING THESE SCROLLS. THERE MAY BE SOME VALUABLE INTELLIGENCE IN IT. IN THE MEANTIME, MS. MACDONALD AND I WILL RENDEZVOUS WITH TEAM ONE

MCQUEEN: DR. FARRELL SENT THE COORDINATES FOR THE RENDEZVOUS. THEY ARE:

LATITUDE: 40°46'4.66"N
LONGITUDE: 73°58'54.87"W

BUCKLEY: THANKS. ACCORDING TO MY SCANNER THAT JUST A SHORT DISTANCE FROM OUR CURRENT LOCATION. SHOULD TAKE LESS THAN AN HOUR FOR US TO GET THERE.

MCQUEEN: DR. FARRELL ALSO SENT MORE INFORMATION ON THE TEMPORAL DISTURBANCE THAT YOU WERE BOTH PICKING UP ON YOUR SCANNERS. HE WAS ABLE TO LOCATE IT 26,000 MILES ABOVE THE EARTH. HE BELIEVES THAT THE DISTURBANCE WAS CAUSED BY OUR PORTAL AND THE TEAMS' TRIP. I'M SENDING THE READINGS HE TOOK TO YOUR SCANNER. HE SAID YOU WOULD UNDERSTAND THEIR SIGNIFICANCE.

BUCKLEY: GOT IT. THANKS. OH MY GOD! THIS TEMPORAL DISTURBANCE IN SPACE HAS THE SAME TEMPORAL RADIATION SIGNATURE AS THE ANSA ONE DID. IF WE CAUSED THIS, IT MEANS THAT WE MADE IT POSSIBLE FOR THE APE-O-NAUTS TO GO BACK TO 1973. WE AREN'T BREAKING THE TIME CIRCLE, WE ARE PART OF IT.

MCQUEEN: OH GOD! IS THERE ANYTHING WE CAN DO?

BUCKLEY: NO, NOT NOW. WE HAVE TO CONTINUE OUR MISSION. TRANSPORT VIRDON AND BURKE BACK TO THE INSTITUTE IMMEDIATELY. BUCKLEY OUT.

END TRANSMISSION

MISSION INCIDENT REPORT

DATE: 08/25/13 3:22PM	**REPORT ID:** 4568HJUR-1587HJHU	**MISSION:** Alpha-Omega 3
FILED BY: Joanne McQueen	**CLASSIFICATION:** Confidential	**DISTRIBUTION:** Dr. Moore

SUMMARY

On 8/25/2013 at 12:15PM I received communication from Dr. Buckley instructing me to transport Alan Virdon and Peter Burke back to the Institute from the year 3979. I did so and the two men arrived safely back at the Institute. They proceeded to assist me in monitoring the ongoing situation.

At 1:37PM, Dr. Farrell sent a communication that Team A and B had successfully rendezvoused and were entering the underground mutant settlement. He also reported that his team had lost sight of the ape army in order to make the rendezvous and had no information as to their whereabouts. Dr. Farrell then instructed me to keep the vortex open indefinitely to monitor the team's progress.

At 2:03PM Dr. Buckley communicated that they had found there way into remains of the New York Public Library. There the team encountered a lone mutant by the name of Caspay. Albina and he communicated telepathically. He informed her that he was the Viceroy of their leader, Mendez XXVI. He also told her that they worshiped the Alpha-Omega bomb as God's instrument on earth and that the bomb had been primed to be launched at the city of the apes if the army entered the mutant settlement. At this point Dr. Farrell started asking questions verbally. This Caspay had the ability to speak and responded. He told Dr. Farrell of the location of the bomb and of astronauts Taylor and Brent. Caspay led them to another room which he called an archive. There he showed them the entire history of the Mendez Dynasty up to the current situation. Dr. Farrell tagged this history and I transported it back to the Institute for preservation. At this point the team reported that they heard the sounds of gunfire. It seems that the ape army had entered the mutant settlement. The team then split up. Dr. Buckley, Ms. MacDonald and Albina proceeded to the location of the Alpha-Omega device to disarm it while Dr. Farrell, Galen and Lucius went to the reported location of Taylor and Brent.

At 2:28PM Dr. Farrell reported that Taylor and Brent were not at their reported location but they found the dead body of a human female from the surface. She had been shot. **See photo:**

At 2:45PM Dr. Buckley reported that his team had safely reached the silo where the Alpha-Omega device was stored under the remains of St. Patrick's Cathedral. He attempted to find an access panel to disarm the bomb while Alma and Ms. MacDonald kept watch.

At 3:02PM we received a garbled communication from Dr. Farrell. It appears that his team had been capture by gorilla soldiers. From what we could make out Galen and Lucius were to be held for interrogation but Dr. Farrell was to be shot. Both Virdon and Burke insisted that I transport them to the team's location, per mission protocols I refused.

At 3:07PM the two men overpowered and restrained me. They took over the controls and transported themselves back to 3979. I had no power to stop them. As soon as I freed myself, I continued to monitor communications.

At 3:14PM Dr. Farrell informed me that Virdon and Burke attacked the gorillas who were about to shoot him and he had been freed but both astronauts were killed in the attempt. The whereabouts of Galen and Lucius were unknown. Dr. Farrell was proceeding to the Cathedral via a side entrance to assist Dr. Buckley. I am currently awaiting further communication from the teams.

The full text to speech transcripts are attached.

SPEECH TO TEXT TRANSCRIPT

MISSION: ALPHA-OMEGA 33	TEAM: TWO	TEAM LEADER: DAVID BUCKLEY
TRANSMISSION: NINE	TIME: INSTITUTE: 8/25/2013 3:23 PM	TARGET: 2/07/3979 11:08 AM

MCQUEEN: DR. BUCKLEY...COME IN DR. BUCKLEY...

BUCKLEY: RECEIVING YOU. I JUST FOUND THE ACCESS PANEL. WILL ATTEMPT TO DISARM THE BOMB. HOW IS DR. FARRELL?

FARRELL: I'M FINE. VIRDON AND BURKE GAVE THEIR LIVES TO SAVE ME. I'M HEADING FOR A SIDE ENTRANCE TO THE CATHEDRAL. HOW IS YOUR PROGRESS?

BUCKLEY: I JUST GOT THIS THING OPEN. INSPECTING THE CIRCUITRY NOW□ .OH MY GOD!

MCQUEEN: WHAT?

BUCKLEY: SOMEONE JUST ACTIVATED THE BOMB. IT IS RISING OUT OF THE SILO. I DIDN'T GET A CHANCE TO DISARM IT.

FARRELL: I'M ALMOST AT THE SIDE ENTRANCE, MAYBE THERE IS SOMETHING I CAN DO.

BUCKLEY: BE CAREFUL. WE'RE HEARING SHOOTING UP THERE□ .DAMN, ALMA AND MARY SAY THAT GORILLAS ARE COMING.

FARRELL: PULL THEM OUT OF THERE JOANNE!

MCQUEEN: LOCKING ON TO THEM NOW. ACTIVATING THE PORTAL.

BUCKLEY: HURRY! THE GORILLAS ARE ALMOST HERE.

MCQUEEN: GOT IT. TRANSPORTING THEM BACK NOW.

FARRELL: THANK GOD.

MCQUEEN: WHAT'S YOUR STATUS DR. FARRELL.

FARRELL: I'M ENTERING THE CATHEDRAL NOW. I CAN HEAR A LOT OF SHOOTING GOING ON.

BUCKLEY: CHRIS, WE'RE BACK AT THE INSTITUTE. WHAT'S GOING ON THERE?

FARRELL: IT'S BRENT. HE'S RIGHT ACROSS FROM ME SHOOTING GORILLAS. TAYLOR IS DOWN BELOW ME. HE'S SHOT, LOOKS DEAD.

BUCKLEY: CAN YOU GET TO THE BOMB?

FARRELL: NO WAY. TOO MANY GORILLAS. THERE IS AN ORANGUTAN BY WHAT LOOKS LIKE A CONTROL PANEL.

BUCKLEY: CAN YOU GET TO THAT?

FARRELL: MAYBE. WAIT. TAYLOR'S NOT DEAD. HE'S GETTING UP, MOVING TOWARD THE CONTROL PANEL. OH NO! BRENT'S BEEN KILLED. SHOT MULTIPLE TIMES BY THE GORILLAS. TAYLOR'S SPEAKING TO THE ORANGUTAN. MY GOD! HE IS REACHING OUT FOR THE CONTROL PANEL., TAYLOR IS THE ONE WHO SETS OFF THE BOMB!

BUCKLEY: SHOOT HIM! SHOOT HIM NOW!

FARRELL: JUST NEED A FEW SECONDS TO LINE UP THE SHOT□ .I DON'T BELIEVE IT, VIRDON IS STILL ALIVE. HE JUST CAME IN AND SHOUTED "TAYLOR STOP!'. THAT'S GIVEN ME THE TIME I NEEDED. FIRING ON THE PANEL□ .DID IT. THE CONTROL IS DE-STROYED. MY GOD THE ROOM IS TRANSFORMING, RADIATING OUT FROM THE PANEL.

MCQUEEN: DETECTING A MASSIVE TEMPORAL DISTURBANCE.

BUCKLEY: JOANNE, PULL HIM BACK IMMEDIATELY.

MCQUEEN: LOCKED ON. TRANSPORTING NOW.

To: All Staff
Subject: Yesterday's Events

I want to get the facts straight before any rumors start flying about everything that happened yesterday. As all staff had been informed, Drs. Farrell and Buckley with their assistant, Joanne McQueen conducted a test of the Temporal Chamber. This test had been scheduled for several weeks.

It is true that when they emerged from the chamber all three exhibited very usual behavior including doing cartwheels on the main lawn. It is unfortunate that they did this during the luncheon honoring the founding staff of the Institute including their fathers. While some suspected that they were drunk, all tests show that none of the three had alcohol or any drugs in their systems.

What is more mysterious is that two unknown women emerged from the Temporal Chamber with them. These women identify themselves as Mary and Alma. They seem rather amiable people and don't seem to offer any threat. However, they are currently being held by security for extensive questioning. How they got into the chamber and where they came from is still undetermined.

In the meantime, Drs. Farrell and Buckley are in the process of writing full reports on their test and the forensic team is currently analyzing all of the data records from the chamber. When the facts are known all appropriate personal will be informed of the results. Until then, I urge all staff not to engage in baseless speculation. That will only damage the reputation of the Institute. Please focus on your work and on making the Institute's 15th Anniversary celebration in two weeks a success.

Speaking of that, I am pleased to inform all of you that it has been confirmed that President Obama and his wife Michelle will be attending. The President will be speaking at the ceremony along with several other dignitaries who will be attending.

We really want to show our best face and making this celebration a success. Along with the President, the ceremony will be attended by former President Bush and his wife Laura, former President Clinton and Secretary Clinton, as well as Governor Chris Christie and Governor Andrew Cuomo. Steven Hawking and Neil DeGrasse Tyson will be speaking. There will be several members of Congress coming including Senators John McCain and Elizabeth Warren and Senator-elect Cory Booker. Business leaders such as Bill Gates, Richard Branson and Donald Trump will also be attending. (In regard to Mr. Trump, since one of his companies was involved in the construction of the Institute, we were obligated to invite him. Because of the friction between him and the President, we will need to keep these two men apart. It has been suggested to sit him with the Clintons. They attended his wedding so they must be friends).

Of course our founder and Director Emeritus, Dr. Otto Hasslein, will be giving the keynote address at the ceremony.

With so many important people coming to the Institute, we can't afford to have rumors buzzing about one of our most important projects. We are reliant on government funding to continue our work, so any controversies could endanger that funding. I hope all of you understand.

Thank you,

Dr. Alexandra Moore
Director

HASSLEIN INSTITUTE
OF TEMPORAL PHYSICS

HASSLEIN INSTITUTE OF TEMPORAL PHYSICS

WINDSOR, NEW JERSEY

INTERNAL MEMO

Date: July 5th, 2016

To: David Buckley

From: Christopher Farrell

Subject: It's over!

Dave,

Happy Birthday my friend! I have good news before you leave for the Berkley conference. We just heard from Senator Warren's office, after nearly 3 years the Congressional investigation is over and no charges will be filed against us, the Institute or Mary and Alma, so happy they both have been able to build a new life here. Broke my heart to tell them Galen and Lucius will never exist.

That's the good news. The bad news is that the Temporal Chamber and Vortex generator have been ordered to be dismantled and we are forbidden to conduct any further experiments. We are also forbidden to ever speak about our experiences or anything relating to the alternate timeline from which we came. That is why I'm sending this memo instead of an email. Don't want it to be recorded anywhere. I suggest that you burn this after you read it.

All the data records will be seized by the government and taken to an undisclosed location. Apparently this is not usual, Professor Rockford told me that when he was an undergrad at Princeton there was an old archeology Professor who claimed that he discovered the Ark of the Covenant back in the '30s but the government seized it and took it an undisclosed location.

Anyway, it is still great to know that we were successful and in a sense helped to create this world we are now living. Imperfect as it is, it is still better than the world we came from. Although my father is ill, he is still alive, as is your father and both our mothers. I think my father's original goal was to change the timeline to prevent the accident that killed his first wife. But that still happened, as did many other events from our timeline. I guess there are some things that can't be changed.

It has been interesting relearning the history of the last 40 years. It seems that our Governor Breck never got beyond a Congressman. He was disgraced in something called the Keating Five scandal and became a used car dealer in California. Conversely, I was gratified to learn that both Alan Virdon and Peter Burke are still alive and well after successful careers as Space Shuttle pilots, since Project ANSA was never revived after the loss of the ANSA II. It was their counterparts from our timeline really saved the day. If they hadn't overpowered Joanne to travel back to the 40th century to save me, we wouldn't have succeeded.

Anyway, good luck at the Berkley conference. Go with the knowledge that you saved human civilization and that apes will never take over the planet. Just one more thing, when you're in San Francisco would you check out a company called Gen-Sys. From what I've read, their new drug ALZ-113 could be the cure for my father's Alzheimer's.

Sincerely,

Christopher Farrell
